**The Routledge Handbook of the Bioarchaeology of Human Conflict** Christopher Knüsel,Martin Smith,2013-12-17 If human burials were our only window onto the past, what story would they tell? Skeletal injuries constitute the most direct and unambiguous evidence for violence in the past. Whereas weapons or defenses may simply be statements of prestige or status and written sources are characteristically biased and incomplete, human remains offer clear and unequivocal evidence of physical aggression reaching as far back as we have burials to examine. Warfare is often described as ‘senseless’ and as having no place in society. Consequently, its place in social relations and societal change remains obscure. The studies in The Routledge Handbook of the Bioarchaeology of Human Conflict present an overview of the nature and development of human conflict from prehistory to recent times as evidenced by the remains of past people themselves in order to explore the social contexts in which such injuries were inflicted. A broadly chronological approach is taken from prehistory through to recent conflicts, however this book is not simply a catalogue of injuries illustrating weapon development or a narrative detailing ‘progress’ in warfare but rather provides a framework in which to explore both continuity and change based on a range of important themes which hold continuing relevance throughout human development.

**Imaging of Inflammation and Infection in Cardiovascular Diseases** Federico Caobelli,2021-09-23 This book addresses the most relevant imaging techniques in order to detect inflammation and infection in the most common cardiovascular diseases. The book presents data concerning molecular imaging (SPECT and PET) and cardiac magnetic resonance imaging (MRI) for each disease, with a special focus on the emerging role of hybrid PET/MR imaging. Different non-ischemic and ischemic diseases as well as cardiac infections are addressed in detail; these include: Cardiac sarcoidosis, Cardiac amyloidosis, the vulnerable plaque, Post-infarction inflammatory alterations, Pericarditis, Myocarditis, Cardiac devices infections, and Endocarditis. The book also provides a comprehensive discussion on new targets and new tracers, to date mostly investigated at a pre-clinical stage, thus constituting an excellent basis for translational imaging. Imaging of Inflammation and Infection in Cardiovascular Diseases will be of interest not only for experts in clinical imaging, but also pre-clinical scientists and will be invaluable for both nuclear medicine physicians and radiologists.

**Cardiovascular Imaging** Elena Aikawa,2014-11-03 This book provides comprehensive reviews on our most recent understanding of the molecular and cellular mechanisms underlying atherosclerosis and calcific aortic valve disease (CAVD) as visualized in animal models and patients using optical molecular imaging, PET-CT, ultrasound and MRI. In addition to presenting up-to-date information on the multimodality imaging of specific pro-inflammatory or pro-calcification pathways in atherosclerosis and CAVD, the book addresses the intriguing issue of whether cardiovascular calcification is an inflammatory disease, as has been recently supported by several preclinical and clinical imaging studies. In order to familiarize researchers and clinicians from other specialties with the basic mechanisms involved, chapters on the fundamental pathobiology of atherosclerosis and CAVD are also included. The imaging chapters, written by some of the foremost investigators in the field, are so organized as to reveal the nature of the involved mechanisms as disease progresses.

**Heart Valves** Paul A. Iaizzo,Tinen L. Iles,Massimo Griselli,James D. St. Louis,2023-06-08 This state-of-the-art handbook is dedicated to cardiac valve anatomy, models for testing and research methods, clinical trials; and clinical needs and applications. In this new edition, chapters are updated with the latest research in addition to new chapters on complex repair of CHD requiring conduits, new trends for valve replacement like the Ozaki procedure, as well as complex procedures in TAV, SAV, HARPOON, and BASILICA, with case studies for each type of procedure. This volume serves as a helpful reference for patients, educators, students, device designers and developers, clinical study specialists, clinicians, and other associated healthcare providers.

**Transcatheter Treatment of Tricuspid Valve Regurgitation** Fabien Praz,Stefan Stortecky,Maurizio Taramasso,2020-07-31 Severe tricuspid regurgitation (TR) is a common valvular heart disease with an incidence of approximately 4% in the adult general population. Most commonly, it results from secondary causes including left ventricular dysfunction, mitral regurgitation and pulmonary arterial hypertension. Isolated severe TR has been identified as an independent predictor of death and cardiac adverse events. Furthermore, TR has been observed to develop late after left-sided valve surgery in up to 10% of patients with adverse impact on clinical outcomes. Perioperative mortality after surgical correction of TR has been reported to range between 2 and 10%. Moreover, a relevant proportion of patients with TR have already undergone open-heart surgical procedures and reoperation has been associated with an excessive risk of mortality. As a result, less invasive treatment options using transcatheter techniques may address an unmet need among high risk and inoperable patients. Different concepts for the percutaneous treatment of symptomatic severe TR have been developed including annular reduction, restoration of coaptation, and edge-to-edge repair. Worldwide, an increasing number of patients is treated using these emerging techniques and early clinical results begin to be available.

**Coronary Artery Disease** Kaan Kırali,2015-11-18 Coronary artery atherosclerosis is the most common cardiac pathology, which is the primary cause of cardiac mortality. Coronary artery stenosis usually involves the proximal portion of the larger epicardial coronary arteries, but diffuse coronary artery disease is also not rare. Most of the patients with/without several comorbidities have asymptomatic atherosclerotic lesions in the coronary territory, and hence early assessment of coronary artery pathology is of utmost importance. Since early surgical intervention is superior to percutaneous interventions, coronary artery bypass grafting is the first choice for the treatment of coronary artery disease. Coronary revascularization can be performed with different approaches according to the patients risk factors. Preventive treatment of coronary artery disease should be the basic strategy for a healthy system.

**Intravascular Imaging: Current Applications and Research Developments** Tsakanikas, Vasilios D.,2011-10-31 Limitations of angiography, the traditional invasive method for assessing vascular pathology, have led to an interest in alternative invasive techniques that visualize the arterial wall and allow characterization of plaque type. These alternative techniques, which include intravascular ultrasound, angiography, thermography, optical coherence tomography, near infrared spectroscopy, and intravascular magnetic resonance imaging are able to provide valuable information regarding plaque vulnerability, the composition of plaque, and luminal morphology. Intravascular Imaging: Current Applications and Research Developments presents all available intravascular imaging techniques and analyzes their impact in clinical practice and research. This publication aims to inform medical specialists, biomedical engineers, bioinformaticians, and researchers of current developments and future trends in intravascular imaging techniques, promoting continued evolution of this discipline.

**What do we know about COVID-19 implications for cardiovascular disease?** Hendrik Tevaearai Stahel,Masanori Aikawa,Shuyang Zhang,Mingxing Xie,Shuping Ge,2023-11-03 he coronavirus epidemic is a major concern for each one of us, whether we figure among the regular citizens, those affected by the disease, or those involved in their treatment. Much has already been said, however, there is still a lack of profound understanding regarding specific situations, such as the interaction between the virus and the cardiovascular system. We have read that elderly people with coronary artery disease, diabetes or hypertension as well as those with a history of stroke may have a higher risk of being infected, seem to be more severely affected than other persons, and have a higher mortality rate. But other infections, flus and stress situations have previously been shown to also affect the risk and prognosis of patients with cardiovascular disease, through myocarditis, arrhythmias, acute coronary syndromes, acute heart failure or cardiogenic shock.
