Sustainable Horticultural Systems Dilip Nandwani, 2014-10-14 Sustainable horticulture is gaining increasing attention in the field of agriculture as demand for the food production rises to the world community. Sustainable horticultural systems are based on ecological principles to farm, optimizes pest and disease management approaches through environmentally friendly and renewable strategies in production agriculture. It is a discipline that addresses current issues such as food security, water pollution, soil health, pest control, and biodiversity depletion. Novel, environmentally-friendly solutions are proposed based on integrated knowledge from sciences as diverse as agronomy, soil science, entomology, ecology, chemistry and food sciences. Sustainable horticulture interprets methods and processes in the farming system to the global level. For that, horticulturists use the system approach that involves studying components and interactions of a whole system to address scientific, economic and social issues. In that respect, sustainable horticulture is not a classical, narrow science. Instead of solving problems using the classical painkiller approach that treats only negative impacts, sustainable horticulture treats problem sources.

Cognition, Metacognition, and Culture in STEM Education Yehudit Judy Dori, Zemira R. Mevarech, Dale R. Baker, 2017-12-01 This book addresses the point of intersection between cognition, metacognition, and culture in learning and teaching Science, Technology, Engineering, and Mathematics (STEM). We explore theoretical background and cutting-edge research about how various forms of cognitive and metacognitive instruction may enhance learning and thinking in STEM classrooms from K-12 to university and in different cultures and countries. Over the past several years, STEM education research has witnessed rapid growth, attracting considerable interest among scholars and educators. The book provides an updated collection of studies about cognition, metacognition and culture in the four STEM domains. The field of research, cognition and metacognition in STEM education still suffers from ambiguity in meanings of key concepts that various researchers use. This book is organized according to a unique manner: Each chapter features one of the four STEM domains and one of the three themes—cognition, metacognition, and culture—and defines key concepts. This matrix-type organization opens a new path to knowledge in STEM education and facilitates its understanding. The discussion at the end of the book integrates these definitions for analyzing and mapping the STEM education research. Chapter 4 is available open access under a Creative Commons Attribution 4.0 International License via link.springer.com

Approaches in Bioremediation Ram Prasad, Elisabet Aranda, 2018-12-08 Bioremediation refers to the clean-up of pollution in soil, groundwater, surface water, and air using typically microbiological processes. It uses naturally occurring bacteria and fungi or plants to degrade, transform or detoxify hazardous substances to human health or the environment. For bioremediation to be effective, microorganisms must enzymatically attack the pollutants and convert them to harmless products. As bioremediation can be effective only where environmental conditions permit microbial growth and action, its application often involves the management of ecological factors to allow microbial growth and degradation to continue at a faster rate. Like other technologies, bioremediation has its

limitations. Some contaminants, such as chlorinated organic or high aromatic hydrocarbons, are resistant to microbial attack. They are degraded either gradually or not at all, hence, it is not easy to envisage the rates of clean-up for bioremediation implementation. Bioremediation represents a field of great expansion due to the important development of new technologies. Among them, several decades on metagenomics expansion has led to the detection of autochthonous microbiota that plays a key role during transformation. Transcriptomic guides us to know the expression of key genes and proteomics allow the characterization of proteins that conduct specific reactions. In this book we show specific technologies applied in bioremediation of main interest for research in the field, with special attention on fungi, which have been poorly studied microorganisms. Finally, new approaches in the field, such as CRISPR-CAS9, are also discussed. Lastly, it introduces management strategies, such as bioremediation application for managing affected environment and bioremediation approaches. Examples of successful bioremediation applications are illustrated in radionuclide entrapment and retardation, soil stabilization and remediation of polycyclic aromatic hydrocarbons, phenols, plastics or fluorinated compounds. Other emerging bioremediation methods include electro bioremediation, microbe-availed phytoremediation, genetic recombinant technologies in enhancing plants in accumulation of inorganic metals, and metalloids as well as degradation of organic pollutants, protein-metabolic engineering to increase bioremediation efficiency, including nanotechnology applications are also discussed.

Spatial Planning in Ghana Ransford A. Acheampong, 2018-10-24 This book documents and analyses spatial planning in Ghana, providing a comprehensive and critical discussion of the evolving institutional and legal arrangements that have shaped and defined Ghana's spatial planning system for more than seven decades; the contemporary policy instruments and mechanisms for articulating and implementing policies and proposals at multiple scales; and the formally established procedures for development management. It covers important themes in contemporary spatial planning discourse, including the evolving meaning, scope and purpose of spatial planning globally; the scales of spatial planning (i.e. national, regional, sub-regional and local); multi-level integration within spatial planning; public participation; the interface between urbanization, sustainable growth management and spatial planning; spatial planning and housing development; integrated spatial development and transportation planning; and spatial planning and the urban informal economy. Intended for undergraduate and graduate students, and academic researchers and practitioners/policy-makers in the multidisciplinary field of spatial planning, it appeals to readers seeking an international perspective on spatial planning systems and practices.

Probiotics and Prebiotics in Animal Health and Food Safety Diana Di Gioia, Bruno Biavati, 2018-02-27 This book discusses the role of probiotics and prebiotics in maintaining the health status of a broad range of animal groups used for food production. It also highlights the use of beneficial microorganisms as protective agents in animal derived foods. The book provides essential information on the characterization and definition of probiotics on the basis of recently released guidelines and reflecting the latest trends in bacterial taxonomy. Last but not least, it discusses the concept of "dead" probiotics and their benefits to animal health in detail. The book will benefit all professors, students, researchers and practitioners in academia and industry whose work involves biotechnology, veterinary sciences or food production.

Net Neutrality Compendium Luca Belli, Primavera De Filippi, 2015-11-10 The ways in which Internet traffic is managed have direct consequences on Internet users' rights as well as on their capability to compete on a level playing field. Network neutrality mandates to treat Internet traffic in a non-discriminatory fashion in order to maximise end users' freedom and safeguard an open Internet. This book is the result of a collective work aimed at providing deeper insight into what is network neutrality, how does it relates to human rights and free competition and how to properly frame this key issue through sustainable policies and regulations. The Net Neutrality Compendium stems from three years of discussions nurtured by the members of the Dynamic Coalition on Network Neutrality (DCNN), an open and multi-stakeholder group, established under the aegis of the United Nations Internet Governance Forum (IGF).

Learning from Science and Technology Policy Evaluation Philip Shapira, Stefan Kuhlmann, 2003-01-01 The contributors analyse and contrast the need and demand for RIT performance measurement and evaluation within the US and European innovation and policy making systems. They assess current US and European RIT evaluation practices and methods in key areas, discuss applications of new evaluative approaches and consider strategies that could lead to improvements in RIT evaluation design and policies.

Forest Products Annual Market Review 2018-2019 UNECE & FAO, 2019-11-04 Achieving the UN Sustainable Development Goals by 2030 will, to a great degree, depend on implementing a "circular economy". In the forest sector, this relates to how we manage forests and use forest products. The Forest Products Annual Market Review covers recent trends, policies and market intelligence on forest products along with production, consumption and trade statistics for the UNECE region; all of which are critical to the role of forests in creating a more circular economy.

Critical Dialogues Urban Governance De Livingstone BUNCE, 2020-12 Cities have been some of the most visible manifestations of the evolution of globalization and population expansion, and global cities are at the cutting edge of such changes. Critical Dialogues of Urban Governance, Development and Activism examines changes in governance, property development, urban politics, and community activism in two key global cities: London and Toronto. By taking these two cities as empirical cases, the book engages in constructive dialogues about the forms, governmental mechanisms and practices, and policy and community-based responses to the concerns facing modern urban centers. Through three central issues, governance, real estate and housing, and community activism and engagement, the authors seek to understand London and Toronto from a nuanced perspective, promoting critical reflection on the experiences and evaluative critiques of each urban context, providing insight into each city's trajectory and engaging critically with wider phenomena and influences on the urban governance challenges in cities beyond.

Mycoremediation and Environmental Sustainability Ram Prasad, S. Chandra Nayak, Ravindra Nath Kharwar, Nawal Kishor Dubey, 2021-04-30 Volume 3 covers recent research with expanded coverage on this important area of remediation. Mycoremediation is the form of bioremediation in which fungi-based technology is used to decontaminate the environment. Fungi are among the primary saprotrophic organisms in an ecosystem, as they are efficient in the decomposition of organic matter. Wood-decay fungi, especially white rot, secretes extracellular enzymes and acids that break down lignin and cellulose. Fungi have been proven to be a very cost-effective and environmentally-friendly way for helping to remove a wide array of toxins from damaged environments or wastewater. These toxins include heavy metals, persistent organic pollutants,

textile dyes, leather tanning industry chemicals and wastewater, petroleum fuels, polycyclic aromatic hydrocarbon, pharmaceuticals and personal care products, pesticides and herbicides, in land, fresh water and marine environments. Bioremediation of toxic organics by fungi is the most sustainable and green route for cleanup of contaminated sites and we discuss the multiple modes employed by fungi for detoxification of different toxic and recalcitrant compounds including prominent fungal enzymes viz., catalases, general lipase, laccases, peroxidases and sometimes intracellular enzymes, especially the cytochrome P450 monooxygenases. Fungi play an important role in the biogeochemical cycling of manganese and other redox-active metals, which is related to their ability to survive radiation and other oxidative challenges. This book covers recent research with more detail on the various types of fungi and associated fungal processes used to clean up wastes and wastewaters in contaminated environments, and discusses their potential for environmental applications.

Making Schools Work Eric A. Hanushek, 2010-12-01 Educational reform is a big business in the United States. Parents, educators, and policymakers generally agree that something must be done to improve schools, but the consensus ends there. The myriad of reform documents and policy discussions that have appeared over the past decade have not helped to pinpoint exactly what should be done. The case for investment in education is an economic one: schooling improves the productivity and earnings of individuals and promotes stronger economic growth and better functioning of society. Recent trends in schooling have, however, lessened the value of society's investments as costs have risen dramatically while student performance has stayed flat or even fallen. The task is to improve performance while controlling costs. This book is the culmination of extensive discussions among a panel of economists led by Eric Hanushek. They conclude that economic considerations have been entirely absent from the development of educational policies and that economic reality is sorely needed in discussions of new policies. The book outlines an improvement plan that emphasizes changing incentives in schools and gathering information about effective approaches. Available research and analysis demonstrates that current central decisionmaking has worked poorly. Concentrating on inputs such as pupil-teacher ratios or teacher graduate degrees appears quite inferior to systems that directly reward performance. Nonetheless, since experience with such alternatives is very limited, a program of extensive evaluation appears to be in order. Attempts to institute radical change on the basis of currently available information involve substantial risks of failure. Many people today find proposals such as charter schools, expanded use of merit pay, or educational vouchers to be appealing. Yet there is little evidence of their effectiveness, and widespread adoption of these proposals is sure to run into substantial problems of implementation. Instead of choosing the right approach, this book advocates a more systematic approach of experimentation, evaluation, and change. In addition to Hanushek, the contributors are Charles S. Benson, University of California, Berkeley; Richard B. Freeman, Harvard University; Dean T. Jamison, UCLA; Henry M. Levin, Stanford University; Rebecca A. Maynard, University of Pennsylvania; Richard J. Murnane, Harvard University; Steven G. Rivkin, Amherst College; Richard H. Sabot, Williams College; Lewis C. Solmon, Milken Institute for Job and Capital Formation; Anita A. Summers, University of Pennsylvania; Finis Welch, Texas A&M University; and Barbara L. Wolfe, University of Wisconsin.

Principles of Plant-Microbe Interactions Ben Lugtenberg, 2014-12-04 The use of microbial plant protection products is growing and their importance will strongly increase due to political and public pressure. World population is growing and the amount of food needed by 2050 will be double of what is produced now whereas the area of agricultural land is decreasing. We must increase crop yield in a sustainable way. Chemical plant growth promoters must be replaced by microbiological products. Also here, the use of microbial products is growing and their importance will strongly increase. A growing area of agricultural land is salinated. Global warming will increase this process. Plants growth is inhibited by salt or even made impossible and farmers tend to disuse the most salinated lands. Microbes have been very successfully used to alleviate salt stress of plants. Chemical pollution of land can make plant growth difficult and crops grown are often polluted and

not suitable for consumption. Microbes have been used to degrade these chemical pollutants.

Crannogs and Later Prehistoric Settlement in Western Scotland Graeme Cavers, 2010 The focus of this research is on the later prehistoric period, from the earliest constructional origins of western Scotland crannogs in the late Bronze Age through to their apparent emergence as status dwellings in the Early Historic period after the midfirst millennium AD. The aim is to investigate the ways in which crannogs functioned as settlements, both on a practical, economic as well as a symbolic and socio-cultural level. Throughout, the primary concern is with contextualisation, considering crannogs within their correct chronological and cultural context through the critical analysis of dating evidence as well as the identification of the relevant ritual and symbolic themes—i.e. the Iron Age veneration of water. It is argued in this book that the stereotypical view of a crannog that has largely been derived from the results of work carried out on Irish crannogs has been misleading in the case of the Scottish sites, tending towards a view of crannogs as high-status strongholds, often as royal seats. Though crannogs were certainly a significant feature of the Early Historic period in Scotland, there is as yet no evidence of direct connections to royalty in this period and, based on the currently available evidence, the characterisation of crannogs as high status sites is misguided in the context of their late Bronze and Iron Age origins.

Science, the Endless Frontier Vannevar Bush, 2021-02-02 The classic case for why government must support science—with a new essay by physicist and former congressman Rush Holt on what democracy needs from science today Science, the Endless Frontier is recognized as the landmark argument for the essential role of science in society and government's responsibility to support scientific endeavors. First issued when Vannevar Bush was the director of the US Office of Scientific Research and Development during the Second World War, this classic remains vital in making the case that scientific progress is necessary to a nation's health, security, and prosperity. Bush's vision set the course for US science policy for more than half a century, building the world's most productive scientific enterprise. Today, amid a changing funding landscape and challenges to science's very credibility, Science, the Endless Frontier resonates as a powerful reminder that scientific progress and public well-being alike depend on the successful symbiosis between science and government. This timely new edition presents this iconic text alongside a new companion essay from scientist and former congressman Rush Holt, who offers a brief introduction and consideration of what society needs most from science now. Reflecting on the report's legacy and relevance along with its limitations, Holt contends that the public's ability to cope with today's issues—such as public health, the changing climate and environment, and challenging technologies in modern society—requires a more capacious understanding of what science can contribute. Holt considers how scientists should think of their obligation to society and what the public should demand from science, and he calls for a renewed understanding of science's value for democracy and society at large. A touchstone for concerned citizens, scientists, and policymakers, Science, the Endless Frontier endures as a passionate articulation of the power and potential of science.

Animal Models for Retinal Diseases Iok-Hou Pang, Abbot F. Clark, 2010-03-04 Affecting over a hundred million individuals worldwide, retinal diseases are among the leading causes of irreversible visual impairment and blindness, and appropriate study models, especially animal models, are essential to furthering our understanding of the etiology, pathology, and progression of these endemic diseases. In *Animal Models for Retinal Diseases*, recognized experts in the field highlight valuable techniques as well as animal models for the prominent retinal diseases in order to aid in the evaluation, development, and improvement of therapeutic strategies. Beginning with an overview of the morphology of the retina, visual behavior, and genetics and genomics approaches for retinal research, the book continues by covering animal models for the research of specific human retinal diseases, e.g., retinal degeneration, age-related macular degeneration, retinopathy of prematurity, diabetic retinopathy, glaucoma, retinal ischemia, and retinal inflammation. As a volume in the successful Neuromethods series, the chapters provide authoritative reviews of the most commonly used approaches in the field. Vital and easy to use, *Animal Models for Retinal Diseases* serves to support the important future research of ocular investigators, ophthalmologists, and neuroscientists

currently delving into this fascinating field of study.
