The Googlization of Everything Siva Vaidhyanathan,2012-03-13 In the beginning, the World Wide Web was exciting and open to the point of anarchy, a vast and intimidating repository of unindexed confusion. Into this creative chaos came Google with its dazzling mission—To organize the world's information and make it universally accessible—and its much-quoted motto, Don't be evil. In this provocative book, Siva Vaidhyanathan examines the ways we have used and embraced Google—and the growing resistance to its expansion across the globe. He exposes the dark side of our Google fantasies, raising red flags about issues of intellectual property and the much-touted Google Book Search. He assesses Google's global impact, particularly in China, and explains the insidious effect of Googlization on the way we think. Finally, Vaidhyanathan proposes the construction of an Internet ecosystem designed to benefit the whole world and keep one brilliant and powerful company from falling into the evil it pledged to avoid.

Rising to the Challenge National Research Council,Policy and Global Affairs,Board on Science, Technology, and Economic Policy,Committee on Comparative National Innovation Policies: Best Practice for the 21st Century,2012-08-06 America's position as the source of much of the world's global innovation has been the foundation of its economic vitality and military power in the post-war. No longer is U.S. pre-eminence assured as a place to turn laboratory discoveries into new commercial products, companies, industries, and high-paying jobs. As the pillars of the U.S. innovation system erode through wavering financial and policy support, the rest of the world is racing to improve its capacity to generate new technologies and products, attract and grow existing industries, and build positions in the high technology industries of tomorrow. Rising to the Challenge: U.S. Innovation Policy for Global Economy emphasizes the importance of sustaining global leadership in the commercialization of innovation which is vital to America's security, its role as a world power, and the welfare of its people. The second decade of the 21st century is witnessing the rise of a global competition that is based on innovative advantage. To this end, both advanced as well as emerging nations are developing and pursuing policies and programs that are in many cases less constrained by ideological limitations on the role of government and the concept of free market economics. The rapid transformation of the global innovation landscape presents tremendous challenges as well as important opportunities for the United States. This report argues that far more vigorous attention be paid to capturing the outputs of innovation - the commercial products, the industries, and particularly high-quality jobs to restore full employment. America's economic and national security future depends on our succeeding in this endeavor.

Critical Point of View Geert Lovink, Nathaniel Tkacz, 2011 For millions of internet users around the globe, the search for new knowledge begins with Wikipedia. The encyclopedia's rapid rise, novel organization, and freely offered content have been marveled at and denounced by a host of commentators. This book moves beyond unflagging praise, well-worn facts, and questions about its reliability and accuracy, to unveil the complex, messy, and controversial realities of a distributed knowledge platform. The essays, interviews and artworks brought together in this reader form part of the overarching 'Critical Point of View' research initiative, which began with a conference in Bangalore (January 2010), followed by events in Amsterdam (March 2010) and Leipzig (September 2010). With an emphasis on theoretical reflection, cultural difference and indeed, critique, contributions to this collection ask: What values are embedded in Wikipedia's software? On what basis are Wikipedia's claims to neutrality made?

Spatial Decision Support Systems Ramanathan Sugumaran, John Degroote, 2010-11-15 Although interest in Spatial Decision Support Systems (SDSS) continues to grow rapidly in a wide range of disciplines, students, planners, managers, and the research community have lacked a book that covers the fundamentals of SDSS along with the advanced design concepts required for building SDSS. Filling this need, Spatial Decision Support Systems: Principles and Practices provides a comprehensive examination of the various aspects of SDSS evolution, components, architecture, and implementation. It integrates research from a variety of disciplines, including the geosciences, to supply a complete overview of SDSS technologies and their application from an interdisciplinary perspective. This groundbreaking reference provides thorough coverage of the roots of SDSS. It explains the core principles of SDSS, how to use them in various decision making contexts, and how to design and develop them using readily available enabling technologies and commercial tools. The book consists of four major parts, each addressing different topic areas in SDSS: Presents an introduction to SDSS and the evolution of SDSS Covers the essential and optional components of SDSS Focuses on the design and implementation of SDSS Reviews SDSS applications from various domains and disciplines—investigating current challenges and future directions The text includes numerous detailed case studies, example applications, and methods for tailoring SDSS to your work environment. It also integrates sample code segments throughout. Addressing the technical and organizational challenges that affect the success or failure of SDSS, the book concludes by considering future directions of this rapidly emerging field of study.

Learned Love Els Stronks, Peter Boot, Dagmar Stiebrl, Emblem Project Utrecht, 2007 Emblem books, which feature combinations of images and text with a moral lesson for the reader, grew out of the Renaissance and were most popular in the Netherlands. Enigmatic, erudite, and often pious, Dutch love emblems synthesized the traditions of European visual and literary arts--and in turn influenced architecture, painting, poetry, and interior design for centuries to come. Learned Love offers an introduction to this enthralling genre and celebrates the completion of Emblem Project Utrecht, an undertaking that digitized twenty-five of the most representative emblem books. This unprecedented volume explores the delicate network of visual motifs and textual mottos that characterize Dutch love emblems. Learned Love demonstrates how emblem books form a web of closely interrelated references, which the contributors liken to the Internet, and traces the cutting-edge digitization project from inception to finish. This book will interest anyone intrigued by the fruitful gray areas between image and text, scholarship and technology.

Geocomputation, Sustainability and Environmental Planning Beniamino Murgante, Giuseppe Borruso, Alessandra Lapucci, 2011-03-30 The experience developed by Ian McHarg represents the first attempt to base environmental planning on more objective methods. In particular, he supposed that the real world can be considered as a layer cake and each layer

represents a sectoral analysis. This metaphor represents the fundamental of overlay mapping. At the beginning, these principles have been applied only by hand, just considering the degree of darkness, produced by layer transparency, as a negative impact. In the following years, this craftmade approach, has been adopted for data organization in Geographical Information Systems producing analyses with a high level of quality and rigour. Nowadays, great part of studies in environmental planning field have been developed using GIS. The next step relative to the simple use of geographic information in supporting environmental planning is the adoption of spatial simulation models, which can predict the evolution of phenomena. As the use of spatial information has definitely improved the quality of data sets on which basing decision-making process, the use of Geostatistics, spatial simulation and, more generally, geocomputation methods allows the possibility of basing the decision-making process on predicted future scenarios. It is very strange that a discipline such as planning which programs the territory for the future years in great part of cases is not based on simulation models. Sectoral analyses, often based on surveys, are not enough to highlight dynamics of an area. Better knowing urban and environmental changes occurred in the past, it is possible to provide better simulations to predict possible tendencies. The aim of this book is to provide an overview of the main methods and techniques adopted in the field of environmental geocomputation in order to produce a more sustainable development.

Desert Meteorology Thomas T. Warner, 2009-01-18 Aridity prevails over more than one third of the land area of the Earth and over a significant fraction of the oceans as well. Yet to date there has been no comprehensive reference volume or textbook dealing with the weather processes that define the character of desert areas. Desert Meteorology fills this gap by treating all aspects of desert weather, such as large-scale and local-scale causes of aridity; precipitation characteristics in deserts; dust storms; floods; climate change in deserts; precipitation processes; desertification; land-surface physics of deserts; numerical modelling of desert atmospheres; and the effect of desert weather on humans. A summary is provided of the climates and surface properties of the desert areas of the world. The book is written with the assumption that the reader has only a basic knowledge of meteorology, physics and calculus, making it useful to those in a wide range of disciplines. It includes review questions and problems for the student. This comprehensive volume will satisfy all who need to know more about the weather and climate of arid lands. It will appeal especially to advanced students and researchers in environmental science, meteorology, physical geography, hydrology and engineering.

A Failed Empire Vladislav M. Zubok,2009-02-01 In this widely praised book, Vladislav Zubok argues that Western interpretations of the Cold War have erred by exaggerating either the Kremlin's pragmatism or its aggressiveness. Explaining the interests, aspirations, illusions, fears, and misperceptions of the Kremlin leaders and Soviet elites, Zubok offers a Soviet perspective on the greatest standoff of the twentieth century. Using recently declassified Politburo records, ciphered telegrams, diaries, and taped conversations, among other sources, Zubok offers the first work in English to cover the entire Cold War from the Soviet side. *A Failed Empire* provides a history quite different from those written by the Western victors. In a new preface for this edition, the author adds to our understanding of today's events in Russia, including who the new players are and how their policies will affect the state of the world in the twenty-first century.
