The Googlization of Everything Siva

Vaidhyanathan 2012-03-13 In the beginning, the World Wide Web was exciting and open to the point of anarchy, a vast and intimidating repository of unindexed confusion. Into this creative chaos came Google with its dazzling mission—"To organize the world's information and make it universally accessible"—and its much-quoted motto, "Don't be evil." In this provocative book, Siva Vaidhyanathan examines the ways we have used and embraced Google—and the growing resistance to its expansion across the globe. He exposes the dark side of our Google fantasies, raising red flags about issues of intellectual property and the much-touted Google Book Search. He assesses Google's global impact, particularly in China, and explains the

effect of Googlization on the way we think. Finally, Vaidhyathan proposes the construction of an Internet ecosystem designed to benefit the whole world and keep one brilliant and powerful company from falling into the "evil" it pledged to avoid.

The case follows the team that developed and launched the Mozilla Firefox web browser. In the creation of the Mozilla Firefox, the team came up with four key rules: 'We want it to be small,' 'Let's not keep too many cooks,' 'All patches are not created equal,' and 'All users are not created equal.' The development team established a goal of 10 million downloads in the first 100 days and a 10% market share in the first year as measures of success for the new browser.
