Deep Excavation Chang-Yu Ou, 2014-04-21 With continued economic development and increasing urbanization, excavations go deeper and become larger in scale, and are sometimes even carried out in difficult soils. These conditions require advanced analysis and design methods and construction technologies. Most books on general foundation engineering introduce the basic analysis and design of excavation, but do not delve into practical considerations. This book examines both theory and practice, from basic to advanced, and discusses the major methods currently in practice around the world. Each chapter also includes problems and their solutions to develop a practical, real-world understanding.

Applications of Artificial Intelligence Techniques in Engineering Hasmat Malik, Smriti Srivastava, Yog Raj Sood, Amir Ahmad, 2018-09-18 The book is a collection of high-quality, peer-reviewed innovative research papers from the International Conference on Signals, Machines and Automation (SIGMA 2018) held at Netaji Subhas Institute of Technology (NSIT), Delhi, India. The conference offered researchers from academic and industry the opportunity to present their original work and exchange ideas, information, techniques and applications in the field of computational intelligence, artificial intelligence and machine intelligence. The book is divided into two volumes discussing a wide variety of industrial, engineering and scientific

applications of the emerging techniques.

Bioprospecting Russell Paterson, Nelson Lima, 2016-12-12 This book considers all aspects of bioprospecting in 14 succinct chapters and a forward by David Hawksworth. The organisms addressed include plants, insects, fungi, bacteria and phages. Bioprospecting has never been more relevant and is of renewed interest, because of the extremely worrying rise in novel, resistant pathogenic microorganisms. The practices in pharmaceutical companies have failed to deliver novel antibiotics to control these infections. We need to look for new sources of drugs from the environment on a massive scale as drug

discovery is “too important to fail”. Furthermore, the field can add great value to ecosystems in terms of economics, while providing additional reasons for maintaining associated services, such as food provision, benign climate, effective nutrient cycling and cultural practices. Bioprospecting provides another reason why climate change must be reduced in order to preserve relevant environments. Previous bioprospecting projects should be re-visited and established biodiversity centres have a major role. Many different ecosystems exist which contain unique organisms with the potential to supply novel antibiotics, enzymes, food, and cosmetics, or they may simply have aesthetic value. The book stresses the difficulties in obtaining successful products and yet describes why natural products should be investigated over combinatorial chemistry. Personal experience of bioprospecting projects are given significance. Issues such as how to share the benefits equitably with local communities are described and why pharmaceutical companies can be reluctant to be involved. Legal issues are discussed. Finally, there has never been a better time for a new book on bioprospecting, because of the need to preserve ecosystems, and from the emergence of resistant pathogenic microorganisms.

Abbey's Road Edward Abbey, 1991-01-30 “The natural world, as we call it, has already become remote, out of reach, mysterious, in the minds of urban and suburban Americans. They see the wilderness disappearing, slipping away, receding into an inaccessible past. But they are mistaken. That world can

still be rescued... that is my main excuse for this book.”—Edward Abbey You are about to visit some of the most exciting places on earth. Not the sort of excitement that makes morning headlines or the nightly news. Instead it is the excitement that comes from experiencing the natural world as it always has been and should be, and seeing human beings living in tune with its subtlest rhythms. In Australian cattle country and in the primitive outback. On a desert island off Mexico and in the Sierra Madres. On the Rio Grande and in the great Southwest. On Lake Powell in Utah and in the living American desert. It is adventure. It is enlightenment. It is vintage Abbey. “I have been along a few of Mr. Abbey’s roads. He sees much more than I did. Indeed, reading him is often better than being there was.”—John Leonard, author of *Reading for My Life*

Plant Genetic Resources and Traditional Knowledge for Food Security Romesh Kumar Salgotra, Bharat Bhushan Gupta, 2016-01-22 With exponentially increasing population across the globe and shrinking resources, the concern of food security is looming large over the world community. To catch up with the fierce pace of growth in all the sectors of development, ensuring uninhibited availability of food resources is a prime agenda. The growing global demand for food, feed, fiber and bio-based renewable materials, such as bio-fuels, is changing the conditions for genetic resources development and bio-resource production worldwide. The crucial role in ensuring food security is played by the agro-based industries and enterprises. Advances in plant genetic

resources coupled with traditional knowledge of the local tribes and native practices facilitate achievement of food security.

The Distinguished Flying Cross Society Randy W. Baumgardner, 2004

Blazing the Trail Mike Gruntman, 2004 Winner of the Luigi Napolitano Award (2006) from the International Academy of Astronautics This book presents the fascinating story of the events that paved the way to space. It introduces the reader to the history of early rocketry and the subsequent developments that led into the space age. People of various nations and from various lands contributed to the breakthrough to space, and the book takes the reader to faraway places on five continents. It also includes many quotes to give readers a flavor of how the participants viewed the developments. Most publications on the topic either target narrow aspects of rocket history or are popular books that scratch the surface, with minimal and sometimes inaccurate technical details. This book bridges the gap. It contains numerous technical details usually unavailable in popular publications. The details are not overbearing and anyone interested in rocketry and space exploration will navigate through the book without difficulty. There are 340 figures and photographs, many appearing for the first time.
