*Arbitration and the Constitution* Peter B. Rutledge, 2013

Arbitration has become an increasingly important mechanism for dispute resolution, both in the domestic and international setting. Despite its importance as a form of state-sanctioned dispute resolution, it has largely remained outside the spotlight of constitutional law. This landmark work represents one of the first attempts to synthesize the fields of arbitration law and constitutional law. Drawing on the author's extensive experience as a scholar in arbitration law who has lectured and studied around the world, the book offers unique insights into how arbitration law implicates issues such as separation of powers, federalism, and individual liberties.

The Disappearing Spoon Sam Kean, 2010-07-12 From New York Times bestselling author Sam Kean comes incredible stories of science, history, finance, mythology, the arts, medicine, and more, as told by the Periodic Table. Why did Gandhi hate iodine (I, 53)? How did radium (Ra, 88) nearly ruin Marie Curie's reputation? And why is gallium (Ga, 31) the go-to element for laboratory pranksters?\* The Periodic Table is a crowning scientific achievement, but it's also a treasure trove of adventure, betrayal, and obsession. These fascinating tales follow every element on the table as they play out their parts in human history, and in the lives of the (frequently) mad scientists who discovered them. THE DISAPPEARING SPOON masterfully fuses science with the classic lore of invention, investigation, and discovery-

-from the Big Bang through the end of time. \*Though solid at room temperature, gallium is a moldable metal that melts at 84 degrees Fahrenheit. A classic science prank is to mold gallium spoons, serve them with tea, and watch guests recoil as their utensils disappear.

**Report to the President on issues raised by the Virginia Tech tragedy ,**

**Managing Openness** Mona Haddad, Ben Shepherd, 2011 The global financial crisis triggered a broad reassessment of economic integration policies in developed and developing countries worldwide. The crisis-induced collapse in trade was the sharpest ever since World War II, affecting all countries and all product categories. A huge shock to the trading system, combined with severe macroeconomic instability, makes it natural for policymakers to call into question the basic underlying assumptions of trade liberalization and openness. In particular, outward-oriented or export-led growth strategies are being reassessed as openness is increasingly associated with greater volatility. However, it is crucial not to lose sight of the dynamic benefits that openness can offer. Examples include technology transfer, increased competitive pressure that reduces markups and improves efficiency, and economies of scale. The real question is how to manage outward-oriented strategies so as to maximize the benefits of openness while

minimizing risks. This book aims to contribute to this important and ongoing policy debate, bringing together recent empirical work on the trade collapse, its causes and consequences, and the broader trade policy agenda in the post-crisis environment. It addresses critical policy issues revolving around the topic of outward-oriented growth strategy, including policy instruments that help manage risks associated with outward-orientation, lessons learned from the crisis for particular countries and regions, and how emerging trade policy issues such as climate change, commodities, global production networking, and migration affect the prospects for recovery and outward-oriented growth.

*Efficient Learning for the Poor* Helen Abadzi, 2006 Large-scale efforts have been made since the 1990s to ensure that all children of the world go to school. But mere enrollment is not sufficient, students must become fluent in reading and calculation by the end of grade 2. Fluency is needed to process large amounts of text quickly and use the information for decisions that may ultimately reduce poverty. State-of-the-art brain imaging and cognitive psychology research can help formulate effective policies for improving the basic skills of low-income students. This book integrates research into applications that extend from preschool brain development to the memory of adult educators. In layman's terms, it provides explanations and answers to questions such as: Why do children have to read fast before they can understand what they read? How do health, nutrition, and stimulation influence brain development? Why should students learn basic skills in their maternal language? Is there such a thing as an untrained teacher? What signs in a classroom show whether students are getting a quality education? How must information be presented in class so that students can retain it and use it? What training techniques are

most likely to help staff put their learning into use? This book would be useful to policymakers, donor agency staff, teacher trainers, supervisors, and inspectors, as well as university professors and students.
