Handbook of Graphs and Networks Stefan Bornholdt,Heinz Georg Schuster,2006-03-06 Complex interacting networks are observed in systems from such diverse areas as physics, biology, economics, ecology, and computer science. For example, economic or social interactions often organize themselves in complex network structures. Similar phenomena are observed in traffic flow and in communication networks as the internet. In current problems of the Biosciences, prominent examples are protein networks in the living cell, as well as molecular networks in the genome. On larger scales one finds networks of cells as in neural networks, up to the scale of organisms in ecological food webs. This book defines the field of complex interacting networks in its infancy and presents the dynamics of networks and their structure as a key concept across disciplines. The contributions present common underlying principles of network dynamics and their theoretical description and are of interest to specialists as well as to the non-specialized reader looking for an introduction to this new exciting field. Theoretical concepts include modeling networks as dynamical systems with numerical methods and new graph theoretical methods, but also focus on networks that change their topology as in morphogenesis and self-organization. The authors offer concepts to model network structures and dynamics, focussing on approaches applicable across disciplines.

Molecular Identification, Systematics, and Population Structure of Prokaryotes Erko Stackebrandt,2010-09-08 Systematic biology has a far wider application than merely the provision of a reliable classification scheme for new strains. With the framework of the hierarchic system stabilizing, genomes, noncoding regions, and genes and their products can now be evaluated in an evolutionary context. This book summarizes recent developments in the molecular characterization of cultured and as-yet uncultured prokaryotes, emphasizing the strengths and weaknesses of individual approaches. The chapters of the book are compiled to stimulate students to enter the field of bacterial diversity, presenting a broad spectrum of fascinating multifaceted disciplines that illuminate the paths to ecosystem functioning, communication within communities, symbiosis, life in extreme environments, astrobiology, and more.

Climate Change and Air Pollution Rais Akhtar,Cosimo Palagiano,2017-10-05 This book discusses regional and international climate-change, air- pollution and human-health scenarios. The research, from both industrialized and developing countries, focuses on region-specific perspectives of climate change impacts on air pollution. After analyzing the variations of climate data over recent decades, the authors consider the different effects of climate change on air pollution and health. As stressed by the IPCC, “pollen, smoke and ozone levels are likely to increase in a warming world, affecting the health of residents of major cities. Rising temperatures will worsen air quality through a combination of more ozone in cities, bigger wild fires and worse pollen outbreaks,” according to a major UN climate report. The report follows the World Health Organization in finding that air pollution is the world’s greatest environmental health risk, killing 7 million people in 2014 (compared to 0.4 million deaths due to malaria). Deteriorating air quality will most affect the elderly, children, people with chronic ill-health and expectant mothers. Another report suggests that more than 5.5 million people die prematurely each year due to air pollution with over half of those deaths occurring in China and India. A study on the air pollution in the USA,suggests that more than half of US population lives in areas with potentially dangerous air pollution, and about

six out of 10 of the top cities for air pollution in the USA are located in the state of California. In the face of future climate change, scientists have urged stronger emission controls to avoid worsening air pollution and the associated exacerbation of health problems, especially in more populated regions of the world. It is hoped that the implementation of the Paris Climate Agreement will help minimize air pollution. Additionally the authors consider the various measures that different countries and groups of countries, like the European Union, have adopted to mitigate the problems arising from climate change and to safeguard the health of population. The book examines the increasing incidence of diseases largely caused by climate change. The countries/regions covered in this study include the USA, Northern Europe (U.K.), Southern Europe (Italy), Canada, Australia, East Asia, Russia, Hong Kong, Taiwan, Thailand, Malaysia, Indonesia, India, South Africa, Mexico, Brazil, Caribbean countries, and Argentina.

Air Quality Guidelines World Health Organization, 2006 This book presents revised guideline values for the four most common air pollutants - particulate matter, ozone, nitrogen dioxide and sulfur dioxide - based on a recent review of the accumulated scientific evidence. The rationale for selection of each guideline value is supported by a synthesis of information emerging from research on the health effects of each pollutant. As a result, these guidelines now also apply globally. They can be read in conjunction with Air quality guidelines for Europe, 2nd edition, which is still the authority on guideline values for all other air pollutants. As well as revised guideline values, this book makes a brief yet comprehensive review of the issues affecting the application of the guidelines in risk assessment and policy development. Further, it summarizes information on: . pollution sources and levels in various parts of the world, . population exposure and characteristics affecting sensitivity to pollution, . methods for quantifying the health burden of air pollution, and . the use of guidelines in developing air quality standards and other policy tools. Finally, the special case of indoor air pollution is explored. Prepared by a large team of renowned international experts who considered conditions in various parts of the globe, these guidelines are applicable throughout the world. They provide reliable guidance for policy-makers everywhere when considering the various options for air quality management.

The Knowledge Cycle Robert F. Rich, 1981-02 Three subfields in the study of knowledge have evolved relatively independently of each other: knowledge creation, knowledge diffusion, and knowledge utilization. Articles examining the development of these subfields, first published in the journal *Knowledge*, have been revised and are presented in this volume. In addition, there is a review article on linkages between these areas; bibliographies are also provided. '...This book should serve as a useful overview and introduction to the relationships between technical knowledge and its use in policy making...the book is an excellent starting point to gain access to interdisciplinary thought on these issues.' -- *Journal of the American Planning Association*, Summer 1982

Asper Nation Marc Edge, 2007 The second generation of Aspers that now runs Canada's largest news media company is much like the first. Israel Izzy Asper's three children often appear in today's headlines. David is bidding to buy the Winnipeg Blue Bombers football team. Gail heads fundraising efforts for the new Canadian Museum of Human Rights. Leonard sits in his father's place as head of CanWest Global Communications. Like its founder, they also use their media empire to influence public opinion. Asper Nation explains why Canadians should be concerned about where the country's first family of news media is coming from, politically. Izzy Asper was an oddity as a Liberal politician in the 1970s. Fiscally, he was to the right of most Conservatives. As a nationally syndicated newspaper columnist, he called for a flat tax and workfare. As a best-selling author, he helped thwart a plan to shift Canada's tax burden from the middle class onto corporations. But when Asper took his policies to Manitobans as Liberal leader in 1973, he was soundly defeated. Asper got into the television business instead and built Canada's third network. Asper made CanWest the country's most profitable broadcaster by feasting on regulations that encouraged the importation of cheap American programming. He took his formula to the world in the 1990s, buying television networks in New Zealand, Australia, and Ireland. Then in 2000, Asper pioneered media convergence, buying Canada's largest newspaper chain from Conrad Black. Southam dailies were soon ordered to run national editorials written at CanWest Global headquarters in Winnipeg. This corporate news control brought protest from journalists and two government inquiries. Neither resulted in long-sought limits on media ownership, however. Marc Edge offers a compelling account of the political perils involved in allowing the Asper family to dominate Canadian media.

Engineering Geology for Society and Territory - Volume 1 Giorgio Lollino,Andrea Manconi,John Clague,Wei Shan,Marta Chiarle,2016-08-23 This book is one out of 8 IAEG XII Congress volumes and deals with climate change affecting different natural processes and environments, such as slope dynamics, water courses, coastal and marine environments, hydrological and littoral processes and permafrost terrain. Due to climate change, major effects are also expected on territorial planning and infrastructure, particularly in extreme climate regions. The volume and its contents aim to analyze the role of engineering geology and the solutions it may offer with respect to the ongoing environmental changes. Contributions regard the modeling of both the factors and the effects induced by climate change. Potential impacts of the climate change on the common practice and routine work of engineering geologists are also analyzed, with particular attention to the risk assessment and mitigation procedures and to the adaptation measures adopted. The Engineering Geology for Society and Territory volumes of the IAEG XII Congress held in Torino from September 15-19, 2014, analyze the dynamic role of engineering geology in our changing world and build on the four main themes of the congress: environment, processes, issues and approaches. The congress topics and subject areas of the 8 IAEG XII Congress volumes are: Climate Change and Engineering Geology. Landslide Processes. River Basins, Reservoir Sedimentation and Water Resources.
