Building Your Gaming PC for Beginners and Dummies Aaron Nelson Ph D,2020-12-21 Building a gaming PC is arguably the best technological investment you can make. A quality gaming rig lasts longer than a smartphone, boasts more power than a gaming console, and is infinitely more versatile than even the most powerful streaming box. Whether you're typing up documents, editing video or cranking up the settings on the latest and greatest games, a gaming PC is the best tool for the job. With regular maintenance, one of these systems could last five years - with regular upgrades, maybe ten.Still, building a PC can be a daunting process, particularly for newcomers. There are plenty of good guides out there, particularly from our sister sites like PC Gamer and Tom's Hardware. However both of these stories focus a lot on mechanics: what components you need, and how to fit them all into a motherboard. Before I built my first PC, even these guides would have been a little daunting.Instead to split the process into two parts and take a more experiential tack. Before you build a PC, you need to decide why you want to build it. What do you want that you can't get from a prebuilt machine? Which parts will facilitate that goal? And how can you make sense of the hundreds of different tech specs between the half-a-dozen different pieces you'll need?With that in mind, this book focuses on picking parts. In a broad sense, I'd like to discuss my thought process behind each part.

Closing the Cancer Divide Felicia Marie Knaul,2012-12-17 Cancer has become a leading cause of death and disability and a serious yet unforeseen challenge to health systems in low- and middle-income countries. A protracted and polarized cancer transition is under way and fuels a concentration of preventable risk, illness, suffering, impoverishment from ill health, and death among poor populations. Closing this cancer divide is an equity imperative. The world faces a huge, unperceived cost of failure to take action that requires an immediate and large-scale global response. Closing the Cancer Divide presents strategies for innovation in delivery, pricing, procurement, finance, knowledge-building, and leadership that can be scaled up by applying a diagonal approach to health system strengthening. The chapters provide evidence-based recommendations for developing programs, local and global policy-making, and prioritizing research. The cases and frameworks provide a guide for developing responses to the challenge of cancer and other chronic illnesses. The book summarizes results of the Global Task Force on Expanding Access to Cancer Care and Control in Developing Countries, a collaboration among leaders from the global health and cancer care communities worldwide, originally convened by Harvard University. It includes contributions from civil society, global and national policy-makers, patients and practitioners, and academics representing an array of fields.

Transporting Atlanta Miriam Konrad,2010-07-02 America's worsening nightmare of gridlock is given full attention in this illuminating study of the transportation crisis in Atlanta. Inconveniences and hardships created by too many automobiles and too few alternatives for movement have reached untenable levels. Miriam Konrad investigates three major transportation projects involving public transit and use of space issues in the Atlanta area: the Metropolitan Atlanta Rapid Transit Authority (MARTA), the bus and rail system that has been the backbone of metropolitan Atlanta's public transportation system for the past thirty years; the Georgia Regional Transportation Authority (GRTA), a superagency created in 1999 to address air quality issues in the region; and the Belt Line, a popular proposal to build a twenty-two-mile loop of greenspace, transit, and other amenities around an inner loop of the city on existing rail beds. She reveals how gridlock, over regional transportation policy and procedures, has emerged out of the competition between growth promoters, environmentalists, and social justice actors.

Task Design In Mathematics Education Anne Watson, Minoru Ohtani, 2015-10-26 *THIS BOOK IS AVAILABLE AS OPEN ACCESS BOOK ON SPRINGERLINK* This open access book is the product of ICMI Study 22 Task Design in Mathematics Education. The study offers a state-of-the-art summary of relevant research and goes beyond that to develop new insights and new areas of knowledge and study about task design. The authors represent a wide range of countries and cultures and are leading researchers, teachers and designers. In particular, the authors develop explicit understandings of the opportunities and difficulties involved in designing and implementing tasks and of the interfaces between the teaching, researching and designing roles – recognising that these might be undertaken by the same person or by completely separate teams. Tasks generate the activity through which learners meet mathematical concepts, ideas, strategies and learn to use and develop mathematical thinking and modes of enquiry. Teaching includes the selection, modification, design, sequencing, installation, observation and evaluation of tasks. The book illustrates how task design is core to effective teaching, whether the task is a complex, extended, investigation or a small part of a lesson; whether it is part of a curriculum system, such as a textbook, or promotes free standing activity; whether the task comes from published source or is devised by the teacher or the student.

Natural Language Processing for Social Media Atefeh Farzindar, Diana Inkpen, 2017-12-15 In recent years, online social networking has revolutionized interpersonal communication. The newer research on language analysis in social media has been increasingly focusing on the latter's impact on our daily lives, both on a personal and a professional level. Natural language processing (NLP) is one of the most promising avenues for social media data processing. It is a scientific challenge to develop powerful methods and algorithms which extract relevant information from a large volume of data coming from multiple sources and languages in various formats or in free form. We discuss the challenges in analyzing social media texts in contrast with traditional documents. Research methods in information extraction, automatic categorization and clustering, automatic summarization and indexing, and statistical machine translation need to be adapted to a new kind of data. This book reviews the current research on NLP tools and methods for processing the non-traditional information from social media data that is available in large amounts (big data), and shows how innovative NLP approaches can integrate appropriate linguistic information in various fields such as social media monitoring, healthcare, business intelligence, industry, marketing, and security and defence. We review the existing evaluation metrics for NLP and social media applications, and the new efforts in evaluation campaigns or shared tasks on new datasets collected from social media. Such tasks are organized by the Association for Computational Linguistics (such as SemEval tasks) or by the National Institute of Standards and Technology via the Text REtrieval Conference (TREC) and the Text Analysis Conference (TAC). In the concluding chapter, we discuss the importance of this dynamic discipline and its great potential for NLP in the coming decade, in the context of changes in mobile technology, cloud computing, virtual reality, and social networking. In this second edition, we have added information about recent progress in the tasks and applications presented in the first edition. We discuss new methods and their results. The number of research projects and publications that use social media data is constantly increasing due to continuously growing amounts of social media data and the need to automatically process them. We have added 85 new references to the more than 300 references from the first edition. Besides updating each section, we have added a new application (digital marketing) to the section on media monitoring and we have augmented the section on healthcare applications with an extended discussion of recent research on detecting signs of mental illness from social media.

Political Development in Hong Kong Ngok Ma, 2007-01-01 This book reviews the political development of Hong Kong before and after 1997, in particular the evolution of state-society relations in the last two decades, to analyze the slow development of democracy and governance in Hong Kong after 1997. This book is a most comprehensive analysis of the multi-faceted changes in Hong Kong in the last 20 years. The scope of changes analyzed included state functions and institutions, political changes such as party development and development of the Legislative Council, and social changes such as social movements, civil liberties, etc. It helps the reader understand the crisis of governance of Hong Kong after 1997, and the difficulty of democratic development in Hong Kong over the years. The book covers: changing state institutions in Hong Kong in the last few decades; party development in Hong Kong; the changing role and function of the legislature in Hong Kong; the evolution of social movement and movement organizational forms; media freedom, civil liberties, and the role of civil society; and theoretical discussions concerning governance problems and state-society relations in Hong Kong. Special emphasis is placed on how these changes brought about a new state-society relation, which in turn brought governance difficulties after 1997.

2016 8th International Conference on Cyber Conflict (CyCon) IEEE Staff, 2016-05-31 In today's increasingly complex cyberspace we see a variety of actors struggling to gain or maintain their position. The ubiquitous use of information and communication technologies has had a profound influence on how these actors pursue their goals and interests. The 8th International Conference on Cyber Conflict (CyCon 2016) will focus on cyber power as one of the core elements of relations between different stakeholders and will discuss how the traditional concept of power applies to cyberspace. Both hard and soft power are being employed to achieve strategic and political goals through technical, legal and economic means. But how can we assess such power? How can we ensure that such power remains in the right hands? How can we ensure or enforce cyber power without risking conflict escalation? How can we respond to exercises of this power with the right tools and measures? Is there a way to maintain a balance of power in cyberspace?
