Conversations with Catalogers in the 21st Century Elaine R. Sanchez, 2010-12-16 Authored by cataloging librarians, educators, and information system experts, this book of essays addresses ideas and methods for tackling the modern challenges of cataloging and metadata practices. Library specialists in the cataloging and metadata professions have a greater purpose than simply managing information and connecting users to resources. There is a deeper and more profound impact that comes of their work: preservation of the human record. *Conversations with Catalogers in the 21st Century* contains four chapters addressing broad categories of issues that catalogers and metadata librarians are currently facing. Every important topic is covered, such as changing metadata practices, standards, data record structures, data platforms, and user expectations, providing both theoretical and practical information. Guidelines for dealing with present challenges are based on fundamentals from the past. Recommendations on training staff, building new information platforms of digital library resources, documenting new cataloging and metadata competencies, and establishing new workflows enable a real-world game plan for improvement.

Rebooting AI Gary Marcus, Ernest Davis, 2019-09-10 Two leaders in the field offer a compelling analysis of the current state of the art and reveal the steps we must take to achieve a truly robust artificial intelligence. Despite the hype surrounding AI, creating an intelligence that rivals or exceeds human levels is far more complicated than we have been led to believe. Professors Gary Marcus and Ernest Davis have spent their careers at the forefront of AI research and have witnessed some of the greatest milestones in the field, but they argue that a computer beating a human in Jeopardy! does not signal that we are on the doorstep of fully autonomous cars or superintelligent machines. The achievements in the field thus far have occurred in closed systems with fixed sets of rules, and these approaches are too narrow to achieve genuine intelligence. The real world, in contrast, is wildly complex and open-ended. How can we bridge this gap? What will the consequences be when we do? Taking inspiration from the human mind, Marcus and Davis explain what we need to advance AI to the next level, and suggest that if we are wise along the way, we won't need to worry about a future of machine overlords. If we focus on endowing machines with common sense and deep understanding, rather than simply focusing on statistical analysis and gathering ever larger collections of data, we will be able to create an AI we can trust—in our homes, our cars, and our doctors' offices. *Rebooting AI* provides a lucid, clear-eyed assessment of the current science and offers an inspiring vision of how a new generation of AI can make our lives better.

Enhancing Science Impact Marcus Haward, Kevin O'Toole, Peat Leith, Brian Coffey, 2017-09-01 Sustainability challenges blur the boundaries between academic disciplines, between research, policy and practice, and between states, markets and society. What do exemplary scientists and organisations do to bridge the gaps between these groups and help their research to make the greatest impact? How do they do it? And how can their best practices be adapted for a diverse range of specific sustainability challenges? *Enhancing Science Impact: Bridging Research, Policy and Practice for Sustainability* addresses these questions in an accessible and engaging way. It provides principles explaining how research programs can work more effectively across the boundaries between science, society and decision-making by building social and institutional networks. The book suggests useful ways of thinking about a diverse range of problems and then offers five approaches to help embed science in sustainability governance. It will be an indispensable guide for researcher leaders, science program managers and science policy advisers interested in ensuring that applied research can meaningfully contribute to sustainability outcomes.
