*Metrology in Urban Drainage and Stormwater Management: Plug and pray* Francois Clemens, Jean-Luc Bertrand-Krajewski, 2021-08-15 This book presents the advancements made in applied metrology in the field of Urban Drainage and Storm water Management over the past two decades in scientific research as well as in practical applications. Given the broadness of this subject (measuring principles, uncertainty in data, data validation, data storage and communication, design, maintenance and management of monitoring networks, technical details of sensor technology), the focus is on water quantity and a sound metrological basis. The book offers common ground for academics and practitioners when setting up monitoring projects in urban drainage and storm water management. This will enable an easier exchange of results so as to allow for a faster scientific progress in the field. A second, but equally important goal, is to allow practitioners access to scientific developments and gained experience when it comes to monitoring urban drainage and storm water systems. In-depth description of international case studies covering all aspects discussed in the book are presented, along with self-training exercises and codes available for readers on a companion website.

**Retrogame Archeology** John Aycock, 2016-05-09 Drawing on extensive research, this book

explores the techniques that old computer games used to run on tightly-constrained platforms. Retrogame developers faced incredible challenges of limited space, computing power, rudimentary tools, and the lack of homogeneous environments. Using examples from over 100 retrogames, this book examines the clever implementation tricks that game designers employed to make their creations possible, documenting these techniques that are being lost. However, these retrogame techniques have modern analogues and applications in general computer systems, not just games, and this book makes these contemporary connections. It also uses retrogames' implementation to introduce a wide variety of topics in computer systems including memory management, interpretation, data compression, procedural content generation, and software protection. Retrogame Archeology targets professionals and advanced-level students in computer science, engineering, and mathematics but would also be of interest to retrogame enthusiasts, computer historians, and game studies researchers in the humanities.

*Raccoons* Samuel I. Zeveloff,2013-07-09 The word raccoon is drawn from the Native American Algonquian language. Their term arakun roughly translates to “he who scratches with his hands.” Anyone who has found a raccoon rummaging around in a once securely closed trash container can attest to how skillful raccoons are with their front paws. In fact, they have four times as many sensory receptors in their forepaw skin as they do in their hindpaws, a ratio similar to that of human hands and feet. Samuel Zeveloff explores this trait and much more in his accessible natural history of raccoons. Written with the general reader in mind, *Raccoons* presents detailed information on raccoon evolution, physical characteristics, social behavior, habitats, food habits, reproduction, and conservation, as well as their relationship with humans and many other topics. The section on distribution and subspecies focuses on the raccoon’s current range expansion, and the material on their cultural significance demonstrates this mammal’s unique status in different North American cultures.

**Ferrari Fever** Marc Sonnery, Paul F. Schouwenburg, 2014-01-31 Ferrari Fever is a fascinating and nostalgic look back at the classic car collecting scene in the 60's and 70's, an era when some of the rarest and most interesting Italian automobiles could still be found hidden or languishing in barns, junkyards or by the side of the road...almost lost in time. Paul Schouwenburg's story begins in wartime occupied Amsterdam, a poignant backdrop to the hardships of the years to follow, when the appearance of any exotic Italian thoroughbred was a rare sight indeed. Fuelled by a fascination for all things mechanical, adventures on a Rudge bicycle and early experiences in his parents' succession of Rovers, Paul gains a burning passion for finding, restoring, and ultimately racing Italian cars. But these were not just any Italian cars -from the early 60s onwards, he begins to uncover several rare

Alfas, from 1900CSS Zagato to Tipo 33/2, in addition to a host of very special Ferraris, including a 250GTO, 340 America Touring, 250 MM Vignale Berlinetta, 250GT SWB Competition/61 and 275GTB/C/LM, usually by word of mouth or tenuous rumour. Having acquired them, often many different models at a time, he would drive them home across Europe through snow storms, and restore them single-handedly in his spare time, full-time job as a world-leading head and neck cancer surgeon permitting! If that wasn't exciting enough, he would then race them, often winning, before moving on to the next irresistible project. Filled with rich anecdotes and rare insights into the colourful characters of the day, including Jacques Swaters and Rob de la Rive Box, Paul's passion and incredible drive make for exciting reading. Indeed this is a unique take, a look in the rear view mirror at a bygone era when gems could be found incredibly cheaply and enthusiasts took seat-of-the-pants decisions regarding many aspects of a hobby which was uncharted, innocent and simply not as commercial as today he couldn't even give away his 250 GTO at the time!

Computer Architecture John Y. Hsu, 2017-12-19 With the new developments in computer architecture, fairly recent publications can quickly become outdated. Computer Architecture: Software Aspects, Coding, and Hardware takes a modern approach. This comprehensive, practical text provides that critical understanding of a central processor by clearly detailing fundamentals, and cutting edge design features. With its balanced software/hardware perspective and its description of Pentium processors, the book allows readers to acquire practical PC software experience. The text presents a foundation-level set of ideas, design concepts, and applications that fully meet the requirements of computer organization and architecture courses. The book features a bottom up computer design approach, based upon the author's thirty years experience in both academe and industry. By combining computer engineering with electrical engineering, the author describes how logic circuits

are designed in a CPU. The extensive coverage of a microprogrammed CPU and new processor design features gives the insight of current computer development. XXXXX Xxxxx, Martin Howse, 2006 xxxxx proposes a radical, new space for artistic exploration, with essential contributions from a diverse range of artists, theorists, and scientists. Combining intense background material, code listings, screenshots, new translation, [the] xxxxx [reader] functions as both guide and manifesto for a thought movement which is radically opposed to entropic contemporary economies. xxxxx traces a clear line across eccentric and wide ranging texts under the rubric of life coding which can well be contrasted with the death drive of cynical economy with roots in rationalism and enlightenment thought. Such philosophy, world as machine, informs its own deadly flipside embedded within language and technology. xxxxx totally unpicks this hiroshimic engraving, offering an dandyish alternative by way of deep examination of software and substance. Life coding is primarily active, subsuming deprecated psychogeography in favour of acute wonderland technology, wary of any assumed transparency. Texts such as Endonomadology, a text from celebrated biochemist and chaos theory pioneer Otto E. Roessler, who features heavily throughout this intense volume, make plain the sadistic nature and active legacy of rationalist thought. At the same time, through the science of endophysics, a physics from the inside elaborated here, a delicate theory of the world as interface is proposed. xxxxx is very much concerned with the joyful elaboration of a new real; software-led propositions which are active and constructive in eviscerating contemporary economic culture. xxxxx embeds Perl Routines to Manipulate London, by way of software artist and Mongrel Graham Harwood, a Universal Dovetailer in the Lisp language from AI researcher Bruno Marchal rewriting the universe as code, and self explanatory Pornographic Coding from plagiarist and

author Stewart Home and code art guru Florian Cramer. Software is treated as magical, electromystical, contrasting with the tedious GUI desktop applications and user-led drudgery expressed within a vast ghost-authored literature which merely serves to rehearse again and again the demands of industry and economy. Key texts, which well explain the magic and sheer art of programming for the absolute beginner are published here. Software subjugation is made plain within the very title of media theorist Friedrich Kittler's essay Protected Mode, published in this volume. Media, technology and destruction are further elaborated across this work in texts such as War.pl, Media and Drugs in Pynchon's Second World War, again from Kittler, and Simon Ford's elegant take on J.G Ballard's crashed cars exhibition of 1970, A Psychopathic Hymn. Software and its expansion stand in obvious relation to language. Attacking transparency means examining the prison cell or virus of language; life coding as William Burrough's cutup. And perhaps the most substantial and thorough-going examination is put forward by daring Vienna actionist Oswald Wiener in his Notes on the Concept of the Bio-adaptor which has been thankfully unearthed here. Equally, Olga Goriunova's extensive examination of a new Russian literary trend, the online male literature of udaff.com provides both a reexamination of culture and language, and an example of the diversity of xxxxx; a diversity well reflected in background texts ranging across subjects such as Leibniz' monadology, the ur-crash of supreme flaneur Thomas de Quincey and several rewritings of the forensic model of Jack the Ripper thanks to Stewart Home and Martin Howse. xxxxx liberates software from the machinic, and questions the transparency of language, proposing a new world view, a sheer electromysticism which is well explained with reference to the works of Thomas Pynchon in Friedrich Kittler's essay, translated for the first time into English, which closes xxxxx. Further contributors include Hal Abelson, Leif Elggren, Jonathan Kemp, Aymeric Mansoux, and socialfiction.org.

**International Trade and Foreign Direct Investment** Union européenne. Commission européenne, EUROSTAT., 2013 In a world of increasing globalization, where political, economic and technological barriers are rapidly disappearing, the ability of the European Union and its Member States to participate in global activity is an important indicator of their performance and competitiveness. In order to remain competitive, modern day business relationships extend well beyond the traditional foreign exchange of goods and services. International trade may be complemented or substituted by producing (and often selling) goods and services in countries other than where an enterprise was first established: this approach is known as foreign direct investment (FDI). The aim of this pocketbook is to give an overview of the external dimension of the EU economy by presenting, in a compact way, the available data on trade in goods, trade in services, and foreign direct investments.--Editor.

**Hearing Impairment and Disability** Ariel Tenenbaum, Joav Merrick, Mohd N. Zakaria, 2020 Much research has been conducted to provide researchers and hearing healthcare professionals with updated information in regard to hearing assessments, results interpretation and case management. This ongoing research is particularly imperative to guide clinicians with optimized methods in assessing and managing pediatric patients with hearing impairment and disability. As such, tremendous research efforts have been made in determining the most optimum methods in assessing

hearing using both subjective and objective tests. Since hearing loss can occur due to disrupted peripheral and/or central auditory pathway, there is also a growing interest to study children with auditory processing disorder (APD). Even though notable achievements have been observed in understanding APD, more research is required, particularly in establishing a gold standard APD test and its specific interventions. Additionally, having an objective test such as speech-evoked auditory brainstem response is beneficial to understand how speech sounds are encoded within the brainstem region in hearing-impaired children, as well as in those with compromised neural function. In this book, we have gathered research from Malaysia and India in this field and hope it will be of interest to our readers--
