Machine Learning for Ecology and Sustainable Natural Resource Management Grant Humphries,Dawn R. Magness,Falk Huettmann,2018-11-05 Ecologists and natural resource managers are charged with making complex management decisions in the face of a rapidly changing environment resulting from climate change, energy development, urban sprawl, invasive species and globalization. Advances in Geographic Information System (GIS) technology, digitization, online data availability, historic legacy datasets, remote sensors and the ability to collect data on animal movements via satellite and GPS have given rise to large, highly complex datasets. These datasets could be utilized for making critical management decisions, but are often "messy" and difficult to interpret. Basic artificial intelligence algorithms (i.e., machine learning) are powerful tools that are shaping the world and must be taken advantage of in the life sciences. In ecology, machine learning algorithms are critical to helping resource managers synthesize information to better understand complex ecological systems. Machine Learning has a wide variety of powerful applications, with three general uses that are of particular interest to ecologists: (1) data exploration to gain system knowledge and generate new hypotheses, (2) predicting ecological patterns in space and time, and (3) pattern recognition for ecological sampling. Machine learning can be used to make predictive assessments even when relationships between variables are poorly understood. When traditional techniques fail to capture the relationship between variables, effective use of machine learning can unearth and capture previously unattainable insights into an ecosystem's complexity. Currently, many ecologists do not utilize machine learning as a part of the scientific process. This volume highlights how machine learning techniques can complement the traditional methodologies currently applied in this field.

Pregnancy-Related Anxiety Rachel Dryer,Robyn Brunton,2021-10-26 This book provides a collective examination of the theoretical, empirical, and clinical perspectives of pregnancy-related anxiety. Pregnancy-related anxiety is a distinct form of anxiety that is experienced by pregnant women and is characterized by pregnancy-specific fears and worries. This form of anxiety has been associated with a range of negative obstetric, neonatal, and maternal outcomes. There has been increased research interest in this form of anxiety, particularly over the last 15 years. The content is organized in three sections. The first section provides a thorough understanding of pregnancy-related anxiety, ranging from its historical development, evidence of its distinctiveness to the antecedents and outcomes of this anxiety for the mother and child. The second section examines key clinical issues around diagnosis and treatment specifically, current diagnosis/screening for this

anxiety and approaches for intervention and treatment. The final section considers emerging areas of research such as pertinent issues around culture and acculturation which are key issues in an increasingly multicultural world. Moreover, the effects of pregnancy-related anxiety on the woman's broader psychosocial functioning are considered with specific chapters on body image and sexual abuse, two key areas of concern. A seminal resource, this book provides a broad examination of the topic from multiple frameworks and perspectives which sets this book apart from other books in print. This book intends to inform and stimulate future research studies, as well as increase awareness and understanding of pregnancy-related anxiety. It is a must-read for researchers, educators, clinicians, and higher education students who care about delivering better support and services to pregnant women, particularly those who are vulnerable and distressed.

  Inequality in Early America Carla Gardina Pestana,2015-03-24 This book was designed as a collaborative effort to satisfy a long-felt need to pull together many important but separate inquiries into the nature and impact of inequality in colonial and revolutionary America. It also honors the scholarship of Gary Nash, who has contributed much of the leading work in this field. The 15 contributors, who constitute a Who's Who of those who have made important discoveries and reinterpretations of this issue, include Mary Beth Norton on women's legal inequality in early America; Neal Salisbury on Puritan missionaries and Native Americans; Laurel Thatcher Ulrich on elite and poor women's work in early Boston; Peter Wood and Philip Morgan on early American slavery; as well as Gary Nash himself writing on Indian/white history. This book is a vital contribution to American self-understanding and to historical analysis.

  Emerging Environmental Technologies, Volume II Vishal Shah,2009-12-02

Within the span of last couple of years, the increasing human interference with v- ious natural ecosystems and higher discharge of pollutants has presented numerous challenges to the society related to preserving the nature for a better tomorrow. The challenges also mount pressure on the scienti?c community to invent technologies that would provide solutions to the problems that are man made and also decrease the negative consequences that we are facing because of our own actions. This edited book attempts to present eight technological innovations that have shown potential to provide answers to a few challenges. Like the previous collection, the described innovations in the current volume also cover a range of areas including water and soil pollution, bio-sensors and energy. However, it is to be realized that no combination of technology can be enough to make a sizeable difference. As I said in my last collection, technological advances have to be integrated with a change in social behavior. The philosophy of sustainable development has to be the principle of future planning and growth. In this collection, I am pleased to include an article on noise pollution. Noise is a pollutant of our own behavior and can only be solved by a behavioral change. The change that is either voluntary or enforced by laws. As an environmental scientist noise is not normally a pollutant that would come in mind as a leading pollutant.

Meghan O'Riley is the Warriors' new events coordinator, and she wants everyone on board—including Jared. Meghan knows he has a history of flaking out on important occasions, and she has no patience for his devil-may-care attitude.
