Noise and Military Service Institute of Medicine, Medical Follow-up Agency, Committee on Noise-Induced Hearing Loss and Tinnitus Associated with Military Service from World War II to the Present, 2006-01-20 The Institute of Medicine carried out a study mandated by Congress and sponsored by the Department of Veterans Affairs to provide an assessment of several issues related to noise-induced hearing loss and tinnitus associated with service in the Armed Forces since World War II. The resulting book, *Noise and Military Service: Implications for Hearing Loss and Tinnitus*, presents findings on the presence of hazardous noise in military settings, levels of noise exposure necessary to cause hearing loss or tinnitus, risk factors for noise-induced hearing loss and tinnitus, the timing of the effects of noise exposure on hearing, and the adequacy of military hearing conservation programs and audiometric testing. The book stresses the importance of conducting hearing tests (audiograms) at the beginning and end of military service for all military personnel and recommends several steps aimed at improving the military services' prevention of and surveillance for hearing loss and tinnitus. The book also identifies research needs, emphasizing topics specifically related to military service.

Investor Protection and Corporate Governance Alberto Chong, Florencio Lopez

de Silanes,2007-06-26 'Investor Protection and Corporate Governance' analyzes the impact of corporate governance on firm performance and valuation. Using unique datasets gathered at the firm-level the first such data in the region and results from a homogeneous corporate governance questionnaire, the book examines corporate governance characteristics, ownership structures, dividend policies, and performance measures. The book's analysis reveals the very high levels of ownership and voting rights concentrations and monolithic governance structures in the largest samples of Latin American companies up to now, and new data emphasize the importance of specific characteristics of the investor protection regimes in several Latin American countries. By and large, those firms with better governance measures across several dimensions are granted higher valuations and thus lower cost of capital. This title will be useful to researchers, policy makers, government officials, and other professionals involved in corporate governance, economic policy, and business finance, law, and management.

Immigration and America's Future Deborah Waller Meyers,Doris M. Meissner,Demetrios G. Papademetriou,2006 At a time when immigration reform has become a top legislative priority for both the Bush administration and Congress, the Migration Policy Institute (MPI) has convened the Independent Task Force on Immigration and America's Future, a bipartisan panel of leaders and policy experts, to develop information, analysis, and proposals that contribute to broader immigration debates. Partner institutions in the

project with MPI are the Manhattan Institute and the Woodrow Wilson International Center for Scholars. This report presents findings and recommendations for sound policy reform in key areas where today's immigration policy and practices are faltering: the unauthorized population, immigration enforcement and national security, labor markets and the legal immigration system, and immigrant integration. The aim of these comprehensive reforms is to ensure that immigrants can continue to make critical contributions to America's success as a nation, while meeting the higher standards of security and service that the American public is demanding.

Geriatric Gastroenterology C. S. Pitchumoni, T. Dharmarajan, 2012-07-26 As aging trends in the United States and Europe in particular are strongly suggestive of increasingly older society, it would be prudent for health care providers to better prepare for such changes. By including physiology, disease, nutrition, pharmacology, pathology, radiology and other relevant associated topics, *Geriatric Gastroenterology* fills the void in the literature for a volume devoted specifically to gastrointestinal illness in the elderly. This unique volume includes provision of training for current and future generations of physicians to deal with the health problems of older adults. It will also serve as a comprehensive guide to practicing physicians for ease of reference. Relevant to the geriatric age group, the volume covers epidemiology, physiology of aging, gastrointestinal physiology, pharmacology, radiology, pathology, motility disorders, luminal disorders,

hepato-biliary disease, systemic manifestations, neoplastic disorders, gastrointestinal bleeding, cancer and medication related interactions and adverse events, all extremely common in older adults; these are often hard to evaluate and judge, especially considering the complex aging physiology. All have become important components of modern medicine. Special emphasis is be given to nutrition and related disorders. Capsule endoscopy and its utility in the geriatric population is also covered. Presented in simple, easy to read style, the volume includes numerous tables, figures and key points enabling ease of understanding. Chapters on imaging and pathology are profusely illustrated. All chapters are written by specialists and include up to date scientific information. Geriatric Gastroenterology is of great utility to residents in internal medicine, fellows in gastroenterology and geriatric medicine as well as gastroenterologists, geriatricians and practicing physicians including primary care physicians caring for older adults.

Development in an Ageing World United Nations. Department of Economic and Social Affairs, 2007 Greater longevity is an indicator of human progress in general. Increased life expectancy and lower fertility rates are changing the population structure worldwide in a major way: the proportion of older persons is rapidly increasing, a process known as population ageing. The process is inevitable and is already advanced in developed countries and progressing quite rapidly in developing ones. The 2007 Survey analyses the

implications of population ageing for social and economic development around the world, while recognising that it offers both challenges and opportunities. Among the most pressing issues is that arising from the prospect of a smaller labour force having to support an increasingly larger older population. Paralleling increased longevity are the changes in intergenerational relationships that may affect the provision of care and income security for older persons, particularly in developing countries where family transfers play a major role. At the same time, it is also necessary for societies to fully recognise and better harness the productive and social contributions that older persons can make but are in many instances prevented from making. The Survey argues that the challenges are not insurmountable, but that societies everywhere need to put in place the policies required to confront those challenges effectively and to ensure an adequate standard of living for each of their members, while respecting and promoting the contribution and participation of all.

Flotation Technology Lawrence K. Wang, Nazih K. Shammass, William A. Selke, Donald B. Aulenbach, 2010-06-09 The past 30 years have seen the emergence of a growing desire worldwide that positive actions be taken to restore and protect the environment from the degrading effects of all forms of pollution – air, water, soil, and noise. Since pollution is a direct or indirect consequence of waste, the seemingly idealistic demand for “zero discharge” can be construed as an unrealistic demand for zero waste. However,

as long as waste continues to exist, we can only attempt to abate the subsequent pollution by converting it to a less noxious form. Three major questions usually arise when a particular type of pollution has been identified: (1) How serious is the pollution? (2) Is the technology to abate it available? and (3) Do the costs of abatement justify the degree of abatement achieved? This book is one of the volumes of the Handbook of Environmental Engineering series. The principal intention of this series is to help readers formulate answers to the last two questions above. The traditional approach of applying tried-and-true solutions to specific pollution problems has been a major contributing factor to the success of environmental engineering and has accounted in large measure for the establishment of a "methodology of pollution control. " However, the realization of the ever-increasing complexity and interrelated nature of current environmental problems renders it imperative that intelligent planning of pollution abatement systems be undertaken.
