Assistive Technology on the Threshold of the New Millennium

Christian Bühler, Harry Knops, 1999 The field of assistive technology is influenced by the ongoing and rapid development of mainstream technologies on the one hand and continuing changes to social systems in relation to societal events - such as the ageing of the population - on the other. The articles in this book provide a broad overview of developments in technical support for people with functional restrictions: key technologies like telecommunications and IT are addressed, while low-tech practical solutions are also considered.

**Architectures, Languages and Techniques for Concurrent Systems** World Occam and Transputer User Group. Technical

Meeting, 1999 During the past fifteen years concurrency in programming languages such as Java rose and fell, and again became popular. At this moment developers advise us to avoid concurrency in programming. They are using a host of deprecated methods in the latest releases How are we to understand the love-hate relationship with what should be a widely used approach of tackling real-world problems? The aim of architectures, Languages and Techniques is to encourage the safe, efficient and effective use of parallel computing. It is generally agreed that concurrency is found in most real applications and that it should be natural to use concurrency in programming. However, there has grown up a myth that concurrency is hard and only for the hardened expert. The papers collected in this book cover the whole spectrum of concurrency, from theoretical underpinnings to applications. The message passing style of concurrency, developed in the Communicating Sequential Processes (CSP) approach, is considered, and extensions are proposed. CSP's realization in the programming language occam is used directly for applications as diverse as modeling of concurrent systems and the description of concurrent hardware. This latter application may be compared to the use of Java for the same purpose. Concurrency and the use of

Java is the subject of further papers, as is the provision of CSP-like facilities in Java and C and techniques to use these languages to construct reliable concurrent systems. At a time when concurrency gives headaches, this book brings a welcome breath of fresh air. Concurrency can really be a positive way forward.

*Extreme Dreams Depend on Teams* Pat Williams,2009-07-22

Pat says though the vision of one person can change the world, no one can carry out a vision alone. Extreme dreams depend on teams, and lack of teamwork is often how big dreams go unrealized. Using examples and anecdotes from history and contemporary life, Pat shows how the greatest world-changing events came to be as the result of the passion of single individuals. In each case, a team was assembled with people equipped in the various areas needed to bring the vision to pass. Pat addresses team assembly, dynamics, and pitfalls to give readers guidance they can immediately apply to their own circumstances. Everyone is looking for ways to be more successful in life. Pat Williams serves up a book packed with practical help to get readers where they want to be.
