Investing in Cultural Diversity and Intercultural Dialogue Unesco,2009-01-01 This report analyses all aspects of cultural diversity, which has emerged as a key concern of the international community in recent decades, and maps out new approaches to monitoring and shaping the changes that are taking place. It highlights, in particular, the interrelated challenges of cultural diversity and intercultural dialogue and the way in which strong homogenizing forces are matched by persistent diversifying trends. The report proposes a series of ten policy-oriented recommendations, to the attention of States, intergovernmental and non-governmental organizations, international and regional bodies, national institutions and the private sector on how to invest in cultural diversity. Emphasizing the importance of cultural diversity in different areas (languages, education, communication and new media development, and creativity and the marketplace) based on data and examples collected from around the world, the report is also intended for the general public. It proposes a coherent vision of cultural diversity and clarifies how, far from being a threat, it can become beneficial to the action of the international community.

Parchman Ordeal, The: 1965 Natchez Civil Rights Injustice G. Mark LaFrancis with Robert Morgan and Darrell White ,2018 In October 1965, nearly 800 young people attempted to march from their churches in Natchez to protest segregation, discrimination and mistreatment by white leaders and elements of the Ku Klux Klan. As they exited the churches, local authorities forced the would-be marchers onto buses and charged them with parading without a permit, a local ordinance later ruled unconstitutional. For approximately 150 of these young men and women, this was only the beginning. They were taken to the Mississippi State Penitentiary in Parchman, where prison authorities subjected them to days of abuse, humiliation and punishment under horrific conditions. Most were African Americans in their teens and early twenties. Authors G. Mark LaFrancis, Robert Morgan and Darrell White reveal the injustice of this overlooked dramatic episode in civil rights history.

Conservation Biology for All Navjot S. Sodhi,Paul R. Ehrlich,2010-01-08 Conservation Biology for All provides cutting-edge but basic conservation science to a global readership. A series of authoritative chapters have been written by the top names in conservation biology with the principal aim of disseminating cutting-edge conservation knowledge as widely as possible. Important topics such as balancing conservation and human needs, climate change, conservation planning, designing and analyzing conservation research, ecosystem services, endangered species management, extinctions, fire, habitat loss, and invasive species are covered. Numerous textboxes describing additional relevant material or case studies are also included. The global biodiversity crisis is now unstoppable; what can be saved in the developing world will require an educated constituency in both the developing and developed world. Habitat loss is particularly acute in developing countries, which is of special concern because it tends to be these locations where the greatest species diversity and richest centres of endemism are to be found. Sadly, developing world conservation scientists have found it difficult to access an authoritative textbook, which is particularly ironic since it is these countries where the potential benefits of knowledge application are greatest. There is now an urgent need to educate the next generation of scientists in developing countries, so that they are in a better position to protect their natural resources.

Euro Area Policies International Monetary Fund. European Dept.,2017-07-25 This paper focuses on the convergence performance of euro area countries before and after euro introduction. The analysis compares per capita incomes across countries, both for the initial group of twelve countries that adopted the euro before 2002 (the so-called EA-12) as well as the current group of 19 euro area members (EA-19). The convergence process has stalled since the introduction of the euro, except for new euro area members which reduced their income gaps vis-à-vis the founding members until their adoption of the common currency. The convergence of income levels is not a prerequisite for a functioning monetary union, but has been considered an important objective of the European economic integration process. Lagging productivity growth in countries with lower initial GDP per capita is found to be the main explanation for the lack of convergence, suggesting that structural reforms can help to restart the convergence process.

Regulatory Theory Peter Drahoš,2017-02-23 This volume introduces readers to regulatory theory. Aimed at practitioners, postgraduate students and those interested in regulation as a cross-cutting theme in the social sciences, Regulatory Theory includes chapters on the social-psychological foundations of regulation as well as theories of regulation such as responsive regulation, smart regulation and nodal governance. It explores the key themes of compliance, legal pluralism, meta-regulation, the rule of law, risk, accountability, globalisation and regulatory capitalism. The environment, crime, health, human rights, investment, migration and tax are among the fields of regulation considered in this ground-breaking book. Each chapter introduces the reader to key concepts and ideas and contains suggestions for further reading. The contributors, who either are or have been connected to the Regulatory Institutions Network (RegNet) at The Australian National University, include John Braithwaite, Valerie Braithwaite, Peter Grabosky, Neil Gunningham, Fiona Haines, Terry Halliday, David Levi-Faur, Christine Parker, Colin Scott and Clifford Shearing.

Spiking Neuron Models Wulfram Gerstner,Werner M. Kistler,2002-08-15 This is an introduction to spiking neurons for advanced undergraduate or graduate students. It can be used with courses in computational neuroscience, theoretical biology, neural modeling, biophysics, or neural networks. It focuses on phenomenological approaches rather than detailed models in order to provide the reader with a conceptual framework. No prior knowledge beyond undergraduate mathematics is necessary to follow the book. Thus it should appeal to students or researchers in physics, mathematics, or computer science interested in biology; moreover it will also be useful for biologists working in mathematical modeling.

Earthquake Probabilities for the Wasatch Front Region in Utah, Idaho, and Wyoming Working Group on Utah Earthquake Probabilities,2016 This publication presents probabilistic earthquake forecasts developed by the Working Group on Utah Earthquake Probabilities which developed 30,50, and 100 year forecasts that include combined time dependent probabilities of large earthquakes for the five central segments of the Wasatch Fault Zone.

Pedagogy for Restoration David Krzesni,2015 Pedagogy for Restoration seeks to understand the conditions leading to the destruction of Earth in order to discover pedagogy for restoration. As we degrade the planet we degrade ourselves and as we degrade ourselves we degrade the planet. Moral development and socialization significantly influence our participation in, construction of, or resistance to the systems of oppression that degrade us. The process of restorative education recognizes that humans are fundamentally good and moral and seeks to promote healthy moral development. We must help students meet their basic needs, center their own identities and experience, and simultaneously emphasize community and relationships to help them find a sense of purpose. These efforts facilitate social and ecological restoration by allowing students to reach a physical and emotional place that is conducive to learning and self-efficacy so that they may engage with whatever issues they find important in their own way and on their own terms.

Dynamic Coordination in the Brain Christoph von der Malsburg,William A. Phillips,Wolf Singer,2010 Nervous systems do not live by the rate code alone. The ceaseless activities of groups of neurons are choreographed into waves, oscillations, synchronized rhythms, and transient coalitions; it is these that underlie behavior, memory, and conscious perception. This exuberant manifesto masterfully summarizes and reflects

upon the relevant evidence of these patterns from all manner of brains, small and large. --

Belgian Exceptionalism Didier Caluwaerts,Min Reuchamps,2021-11-24 This book takes stock of Belgium’s exceptional and – for some foreign observers –schizophrenic position in the political world and explains its idiosyncrasy to a non-Belgian audience. Offering a broad and comprehensive analysis of Belgian politics, the guiding questions throughout each of the chapters of this book are: Is Belgium a political enigma, and why? Along which axes is Belgium exceptional compared to other countries? And what insights does a comparative study of Belgian politics have to offer? The book therefore provides a critical assessment of how Belgian politics stands out internationally, both in good and bad ways – including consociationalism, federalism, democratic innovations, Euroscepticism, government formation, gender equality, among others – and which factors can explain Belgium’s exceptional position. Based on cutting-edge research findings, the book will be of wide interest to scholars and students of Belgian politics, European Politics and Comparative politics.
