**Advanced IT Tools** Nobuyoshi Terashima,Edward Altman,2013-11-18 **TRACK 1: Innovative Applications in the Public Sector** The integration of multimedia based applications and the information superhighway fundamentally concerns the creation of a communication technology to support the activities of people. Communication is a profoundly social activity involving interactions among groups or individuals, common standards of exchange, and national infrastructures to support telecommunications activities. The contributions of the invited speakers and others in this track begin to explore the social dimension of communication within the context of integrated, information systems for the public sector. Interactions among businesses and households are described by Ralf Strauss through the development within a real community of a wired city with information and electronic services provided by the latest telecommunications technologies. A more specific type of interaction between teacher and student forms the basis of education. John Tiffin demonstrates how virtual classrooms can be used to augment the educational process. Carl Loeffler presents yet another perspective on interaction through the integration of A-life and agent technologies to investigate the dynamics of complex behaviors within networked simulation environments. Common standards for communication in the form of electronic documents or CSCW (Computer Supported Cooperative Work), according to Roland Traunmüller, provide enabling technologies for a paradigm shift in the management of organizations. As pointed out by William Olle, the impact of standardization work on the future of information technology depends critically upon the interoperability of software systems.

From Organizational Welfare to Business Success: Higher Performance in Healthy Organizational Environments Gabriele Giorgi,Mindy Shoss,Annamaria Di Fabio,2017-10-25 This e-book provides insight into the link between employee health and productivity/performance, with a focus on how individuals, groups, or organizations can intervene in this relationship to improve both well-being and performance-related outcomes. Given the continuous changes that organizations and employees face, such as the aging workforce and continued economic turbulence, it is not surprising that studies are increasingly finding that employee health is related to job conditions. The papers in this e-book emphasize that organizations make a critical difference when it comes to employees' health and well-being. In turn, healthy employees help their organizations to flourish. Such findings are in line with the recent emphasis by both the International Labour Organization (ILO) and the United Nations (UN) on the importance of work for individual well-being and the importance of individual well-being for productive and sustainable economic growth (see e.g., ILO, 1985; World Health Organisation, 2007; UN, 2015). Overall, the papers report findings from a

cumulative sample of nearly 19,000 workers and perspectives from 68 authors. They suggest that performance cannot be successfully achieved at the cost of health and well-being, and provide various perspectives and tools to guide future research and practice.

One World One School Mike Douse and Philip Uys, 2020-03-17 Digitisation is creating an entirely new and wonderfully inter-connected world. This fundamental and forthcoming transformation necessitates and makes possible utterly original understandings, approaches, arrangements and aspirations. However, while sectors such as communication, banking, entertainment, defence, information, retail and security have been radically restructured by digitisation, the applications of ICT in education have been characterised by four decades of disappointment, disillusionment and frustration. Clearly, isolated and piecemeal digital innovations can achieve little of value within twentieth century schools and archaic educational systems. Given that we are in a time of unparalleled challenges and opportunities, One World One School recognises that, as our starting-point, we must agree upon a fresh comprehension of what education is really for in the third millennium and beyond. Mike Douse and Philip Uys affirm that it needs to be totally restructured with digitisation as the cohesive force. Moreover, the novel Coronavirus/COVID-19 pandemic (appearing as this book was on the point of completion) necessitates an immediate and inspirational online educational response which may well pave the way towards that fundamental transformation. Education's substance, practice and consequences may now become much more equitable, ethical and enjoyable (and far less competitive, test-oriented and world-of-work-dominated). Billions of learners are yearning for education. Instead, nine-tenths of them are fobbed off with job preparation - and discriminatory job preparation at that. Just as there is now, virtually, just the one global library, so also we are moving towards the worldwide universal school, consigning contemporary educational arrangements (including competitive examinations, imposed curricula, indoctrination and propaganda, the reproduction of inequality and the demeaning power of PISA) to the rubbish bin of history. As delineated in One World One School, the primary phase is the time of preparation - enjoyable and stimulating years aimed at enabling each child to become ready for self-directed learning. From then onwards, throughout life, the curriculum may and must be learner driven (rather than designed externally from and directed at learners as victims) embodying a convivial learning-supporting pedagogy, with teachers playing (dramatically altered, more professionally fulfilling and essentially responsive) concierges of learning and escorts to wisdom roles. The Digital Age creates the universal consciousness embodying the tangible/digital duality that characterises these petrifyingly exciting times. These coming COVID19 months offer an opportunity to invest substantially in effective and enjoyable online education for all. Digitisation involves a pivotal leap in human potential as profound as the wheel in terms of development, as significant as the book in relation to information, and as iconoclastic as anything dreamed up by the deepest analyst/therapist in terms of the human psyche. Nothing - educationally - will ever be the same again [just as nothing - economically and socially - will ever be the same post-pandemic] and all of this is thoughtfully and entertainingly explored in One World One School.

*Earth Observation Open Science and Innovation* Christoph Aubrecht, Pierre-Philippe

Mathieu,2020-10-08 Over the past decades, rapid developments in digital and sensing technologies, such as the Cloud, Web and Internet of Things, have dramatically changed the way we live and work. The digital transformation is revolutionizing our ability to monitor our planet and transforming the way we access, process and exploit Earth Observation data from satellites. This book reviews these megatrends and their implications for the Earth Observation community as well as the wider data economy. It provides insight into new paradigms of Open Science and Innovation applied to space data, which are characterized by openness, access to large volume of complex data, wide availability of new community tools, new techniques for big data analytics such as Artificial Intelligence, unprecedented level of computing power, and new types of collaboration among researchers, innovators, entrepreneurs and citizen scientists. In addition, this book aims to provide readers with some reflections on the future of Earth Observation, highlighting through a series of use cases not just the new opportunities created by the New Space revolution, but also the new challenges that must be addressed in order to make the most of the large volume of complex and diverse data delivered by the new generation of satellites. **Security Guide for IBM i V6.1** Jim Cook, Juan Carlos Cantalupo, MinHoon Lee, IBM Redbooks, 2009-05-29 The IBM® i operation system (formerly IBM i5/OS®) is considered one of the most secure systems in the industry. From the beginning, security was designed as an integral part of the system. The System i® platform provides a rich set of security features and services that pertain to the goals of authentication, authorization, integrity, confidentiality, and auditing. However, if an IBM Client does not know that a service, such as a virtual private network (VPN) or hardware cryptographic support, exists on the system, it will not use it. In addition, there are more and more security auditors and consultants who are in charge of implementing corporate security policies in an organization. In many cases, they are not familiar with the IBM i operating system, but must understand the security services that are available. This IBM Redbooks® publication guides you through the broad range of native security features that are available within IBM i Version and release level 6.1. This book is intended for security auditors and consultants, IBM System Specialists, Business Partners, and clients to help you answer first-level questions concerning the security features that are available under IBM. The focus in this publication is the integration of IBM 6.1 enhancements into the range of security facilities available within IBM i up through Version release level 6.1. IBM i 6.1 security enhancements include: - Extended IBM i password rules and closer affinity between normal user IBM i operating system user profiles and IBM service tools user profiles - Encrypted disk data within a user Auxiliary Storage Pool (ASP) - Tape data save and restore encryption under control of the Backup Recovery and Media Services for i5/OS (BRMS) product, 5761-BR1 - Networking security enhancements including additional control of Secure Sockets Layer (SSL) encryption rules and greatly expanded IP intrusion detection protection and actions. DB2® for i5/OS built-in column encryption expanded to include support of the Advanced Encryption Standard (AES) encryption algorithm to the already available Rivest Cipher 2 (RC2) and Triple DES (Data Encryption Standard) (TDES) encryption algorithms. The IBM i V5R4 level IBM Redbooks publication IBM System i Security Guide for IBM i5/OS Version 5 Release 4, SG24-6668, remains available.
