The Fingerprint U. S. Department

Justice, 2014-08-02 The idea of The Fingerprint Sourcebook originated during a meeting in April 2002. Individuals representing the fingerprint, academic, and scientific communities met in Chicago, Illinois, for a day and a half to discuss the state of fingerprint identification with a view toward the challenges raised by Daubert issues. The meeting was a joint project between the International Association for Identification (IAI) and West Virginia University (WVU). One recommendation that came out of that meeting was a suggestion to create a sourcebook for friction ridge examiners, that is, a single source of researched information regarding the subject. This sourcebook would provide educational, training, and research information for the international scientific community.

Current Challenges in Pharmacovigilance World Health Organization, Council for International Organizations of Medical Sciences, CIOMS, 2001-01-01

In spite of recent progress in the harmonization of terminology and processes affecting work on the clinical safety of medicines consensus is needed on standards for many difficult aspects of day-to-day pharmacovigilance that continue to pose problems for both the pharmaceutical industry and drug regulators. The CIOMS V Working Group has generated proposals for pragmatic approaches to dealing with such issues as: classification and handling of individual safety case reports from a variety of sources (spontaneous consumer reports solicited reports literature the Internet observational studies and secondary data bases disease and other registries regulatory ADR databases and licensor-licensee interactions); new approaches to case management and regulatory reporting practices (proper clinical evaluation of cases incidental vs other events patient and reporter identifiability seriousness criteria expectedness criteria case follow-up criteria and the role and structure of case narratives); improvements and efficiencies in the format content and reporting of periodic safety update reports (PSURs) (including results of an industry survey on PSUR workloads and practices; proposals for high case volume and long time-period reports simplification of certain PSURs summary bridging reports addendum reports license renewal reports for EU and Japan dealing with old products and other technical details); determination and use of

population exposure (denominator) data (sources of data and a guide to analytical approaches for a variety of circumstances).The Group has also taken stock of the current state of expedited and periodic clinical safety reporting requirements around the world with summary data on regulations from more than 60 countries. Recommendations are made for enhancing the harmonization steps already taken as a result of previous CIOMS publications and the ICH process. In addition to dealing with unfinished and unresolved issues from previous CIOMS initiatives the report covers many emerging topics such as those involving new technologies. Its 20 Appendices provide a wealth of detailed explanations and reference information. It is the most comprehensive and recent treatment of difficult pharmacovigilance issues affecting the working practices and systems of drug safety and other pharmaceutical professionals.

Strengthening the Disaster Resilience of the Academic Biomedical Research Community National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Health and Medicine Division, Institute for Laboratory Animal Research, Board on Earth Sciences and Resources, Board on Health Sciences Policy, Committee on Strengthening the Disaster Resilience of Academic Research Communities, 2017-11-20 The academic biomedical research community is a hub of employment, economic productivity, and scientific progress. Academic research institutions are drivers of economic development in their local and state economies and, by extension, the national economy.

Beyond the economic input that the academic biomedical research community both receives and provides, it generates knowledge that in turn affects society in myriad ways. The United States has experienced and continues to face the threat of disasters, and, like all entities, the academic biomedical research community can be affected. Recent disasters, from hurricanes to cyber-attacks, and their consequences have shown that the investments of the federal government and of the many other entities that sponsor academic research are not uniformly secure. First and foremost, events that damage biomedical laboratories and the institutions that house them can have impacts on the safety and well-being of humans and research animals. Furthermore, disasters can affect career trajectories, scientific progress, and financial stability at the individual and institutional levels. Strengthening the Disaster Resilience of the Academic Biomedical Research Community offers recommendations and guidance to enhance the disaster resilience of the academic biomedical research community, with a special focus on the potential actions researchers, academic research institutions, and research sponsors can take to mitigate the impact of future disasters.

New Frontiers of Molecular Epidemiology of Infectious Diseases Serge Morand,François Beaudreau,Jacques Cabaret,2011-09-08 Molecular epidemiology has recently broaden its focuses due to the development of molecular tools but also by incorporating advances of other fields such as mathematical epidemiology, molecular ecology, population genetics and evolution. Facing new risks of emerging and re-emerging infectious diseases that are threats for humans and their livestock, the objectives of molecular epidemiology include: - the development of molecular tools, genotyping and gene expression - the incorporation of concepts and results of population genetics of infectious diseases - the integration of recent advances in theoretical

epidemiology and evolutionary ecology of diseases - a better understanding of transmission for the development of risk factors analyses. This book will demonstrate how the latest developments in molecular tools and in epidemiology can be integrated with studies of host-pathogen interactions. Besides a strong theoretical component, there will also be an emphasis on applications in the fields of epidemiology, public health, veterinary medicine, and health ecology. Students and researchers in the fields of epidemiology, animal and human health, evolutionary ecology, parasitology are the main potential readers of the book, as well as a broader audience from veterinary medicine and conservation.

Roma in an Expanding Europe Dena

Ringold, Mitchell Alexander Orenstein, Erika Wilkens, 2005 Following the enlargement of the European Union in May 2004, Roma (or gypsies) are now the largest minority group in Europe. They are also one of the poorest and most vulnerable groups, living mainly in Central and Eastern Europe, suffering poverty levels as high as ten times that found within majority populations. The lack of information about the living conditions and needs of Roma people compound these stark gaps in human development outcomes. This publication, prepared for a conference held in Budapest, Hungary in June 2003, brings together original sociological research, evaluations of programme initiatives, and the first comparative cross-country household survey on ethnicity and poverty. It finds that Roma poverty is multi-faceted and

can only be addressed by a inclusive policy approach which respects their diversity.

Disease Eradication in the 21st Century Stephen L. Cochi, Walter R. Dowdle, 2023-09-19 Experts explore the biological, social, and economic complexities of eradicating disease. Disease eradication represents the ultimate in global equity and the definitive outcome of good public health practice. Thirty years ago, the elimination of smallpox defined disease eradication as a monumental global achievement with lasting benefits for society. Today, the global commitment to eradicate polio and guinea worm and heightened interest in the potential eradication of other infectious diseases, including measles/rubella, lymphatic filariasis, onchocerciasis, and malaria, dominate public health concerns. But what does it take to eradicate a disease? This book takes a fresh look at the evolving concepts of disease eradication, influenced by scientific advances, field experience, societal issues, and economic realities. A diverse group of experts from around the world, representing a range of disciplines, examines the biological, social, political, and economic complexities of eradicating a disease. The book details lessons learned from the initiatives against polio, measles/rubella, and onchocerciasis. Further chapters examine ethical issues, the investment case, governance models,

organizational and institutional arrangements, political and social factors, feasibility of eradication goals, priority setting, and the integration of disease eradication programs with existing health systems.
