Redbooks,2018-06-14 One of a firm's most valuable
resources is its data: client lists, accounting
data, employee information, and so on. This
critical data must be securely managed and
controlled, and simultaneously made available to
those users authorized to see it. The IBM® z/VSE®
system features extensive capabilities to
simultaneously share the firm's data among
multiple users and protect them. Threats to this
data come from various sources. Insider threats
and malicious hackers are not only difficult to
detect and prevent, they might be using resources
with the business being unaware. This IBM
Redbooks® publication was written to assist z/VSE
support and security personnel in providing the
enterprise with a safe, secure and manageable
environment. This book provides an overview of the
security that is provided by z/VSE and the
processes for the implementation and configuration
of z/VSE security components, Basic Security

  The Fingerprint U. S. Department
Justice,2014-08-02 The idea of The Fingerprint

Sourcebook originated during a meeting in April 2002. Individuals representing the fingerprint, academic, and scientific communities met in Chicago, Illinois, for a day and a half to discuss the state of fingerprint identification with a view toward the challenges raised by Daubert issues. The meeting was a joint project between the International Association for Identification (IAI) and West Virginia University (WVU). One recommendation that came out of that meeting was a suggestion to create a sourcebook for friction ridge examiners, that is, a single source of researched information regarding the subject. This sourcebook would provide educational, training, and research information for the international scientific community.

Cybersecurity Framework Manufacturing Profile National Institute of Standards,2017-05-31 March 2017 If you like this book (or the Kindle version), please leave positive review. This document provides the Cybersecurity Framework implementation details developed for the manufacturing environment. The Manufacturing Profile of the Cybersecurity Framework can be used as a roadmap for reducing cybersecurity risk for manufacturers that is aligned with manufacturing sector goals and industry best practices. The Profile gives manufacturers:* A method to identify opportunities for improving the current cybersecurity posture of the manufacturing system* An evaluation of their ability to operate the control environment at their acceptable risk level* A standardized approach to preparing the cybersecurity plan for ongoing assurance of the manufacturing system's security Why buy a book you can download for free? First you gotta find it and make sure it's the latest version (not always easy). Then you gotta print it using a network printer you share with 100 other people – and its outta paper – and the toner is low (take out the toner cartridge, shake it, then put it back). If it's just 10 pages, no problem, but if it's a 250-page book, you will need to punch 3 holes in all those pages and put it in a 3-ring binder. Takes at least an hour. An engineer that's paid $75 an hour has to do this himself (who has assistant's anymore?). If you are paid more than $10 an hour and use an ink jet printer, buying this book will

save you money. It's much more cost-effective to just order the latest version from Amazon.com This book is published by 4th Watch Books and includes copyright material.
