Mass Fatality Incidents National Institute of Justice (U.S.). Technical Working Group for Mass Fatality Forensic Identification, 2005 In a mass fatality incident, correct victim identification is essential to satisfying humanitarian considerations, meet civil and criminal investigative needs, and identify victim perpetrators. This report provides medical examiners/coroners with guidelines for preparing the portion of the disaster plan concerned with victim identification and summarizes the victim identification process for other first responders. It discusses the integration of the medical examiner/coroner into the initial response process, and presents the roles of various forensic disciplines (including forensic anthropology, radiology, odontology, fingerprinting, and DNA analysis) in victim identification. This guide represents the experience of dozens of Federal, State and private forensic experts who took part in the Technical Working Group for Mass Fatality Forensic Identification.

Promising Strategies to Reduce Gun Violence David I. Sheppard, 1999 Culmination of a survey and review conducted by a U.S. Department of Justice Work Group and COSMOS Corporation.

The Appropriate and Effective Use of Security Technologies in U. S. Schools Mary W. Green, 2000-08 Provides basic guidelines to law enforce. (LE) agencies and school admin. as they decide what, if any, security technol. should be considered as they develop safe school strategies. This guide will help schools and LE partners analyze their vulnerability to violence, theft, and vandalism, and suggest technol. to address these problems. Describes commercially avail. technol. and urges consideration of not only the potential

safety benefits, but also the costs that schools may incur for capital invest., site mod's., staffing, train., and equip. maint and repair. Topics: security concepts and oper'l. issues, video surveill., weapons detect. devices, entry controls, and duress alarms.

Silvopastoral Systems in Southern South America Pablo Luis Peri, Francis Dube, Alexandre Varella, 2016-03-02 This multi-authored volume contains peer-reviewed chapters from leading researchers and professionals in silvopastoral systems topic in Southern South America (Argentina, Chile and South Brazil). It is a compendium of original research articles, case studies, and regional overviews and summarizes the current state of knowledge on different components and aspects (pasture production, animal production, trees production, carbon sequestration, conservation) of silvopastoral systems in native forests and tree plantations. The main hypothesis of the book is that farmers have integrated tree and pasture/grassland species in their land use systems to reach higher production per unit of land area, risk avoidance, product diversification, and sustainability. These production systems also impact positively in main ecosystem processes. Management of these productive systems, Policy and Socioeconomic Aspects provide great opportunities and challenges for farmers and policy makers in our region. The book is unique on this subject in Southern South America and constitutes a valuable reference material for graduate students, professors, scientists and extensionists who

work with silvopastoral systems.

The Fingerprint U. S. Department Justice, 2014-08-02 The idea of The Fingerprint Sourcebook originated during a meeting in April 2002. Individuals representing the fingerprint, academic, and scientific communities met in Chicago, Illinois, for a day and a half to discuss the state of fingerprint identification with a view toward the challenges raised by Daubert issues. The meeting was a joint project between the International Association for Identification (IAI) and West Virginia University (WVU). One recommendation that came out of that meeting was a suggestion to create a sourcebook for friction ridge examiners, that is, a single source of researched information regarding the subject. This sourcebook would provide educational, training, and research information for the international scientific community.

Plant Virus Evolution Marilyn J. Roossinck, 2008-02-23 This book provides a comprehensive look at the field of plant virus evolution. It is the first book ever published on the topic. Individual chapters, written by experts in the field, cover plant virus ecology, emerging viruses, plant viruses that integrate into the host genome, population biology, evolutionary mechanisms and appropriate methods for analysis. It covers RNA viruses, DNA viruses, pararetroviruses and viroids, and presents a number of thought-provoking ideas.

National Identification Systems Carl Watner, Wendy McElroy, 2003-12-24 Throughout history, governments have sought more efficient ways to count, tax, allocate, monitor and order the activities of their citizens. Watner and McElroy have compiled a collection of essays that present the historical, religious, moral and practical arguments

against government enumeration. The articles look at several government naming practices and the census and discuss how the collection of seemingly innocent data could be used to commit abuses. Section one recounts the history of what we now call national ID. Section two covers contemporary technologies, such as microchips, email tracking and camera-based surveillance systems, applying to each the test, How would this catch terrorists or other criminals without destroying the rights of peaceable people? Section three imagines a future of rebellion against a government tracking its citizens in the name of security, but offers some hope that American culture does not lend itself to the fanatical control that a high-tech national ID system could make possible.

Digital Information Processing and Communications Václav Snásel, Jan Platos, Eyas El-Qawasmeh, 2011-06-30 This two-volume-set (CCIS 188 and CCIS 189) constitutes the refereed proceedings of the International Conference on Digital Information Processing and Communications, ICDIPC 2011, held in Ostrava, Czech Republic, in July 2011. The 91 revised full papers of both volumes presented together with 4 invited talks were carefully reviewed and selected from 235 submissions. The papers are organized in topical sections on network security; Web applications; data mining; neural networks; distributed and parallel processing; biometrics technologies; e-learning; information ethics; image processing; information and data management; software engineering; data compression; networks; computer security; hardware and systems; multimedia; ad hoc network; artificial intelligence; signal processing; cloud computing; forensics; security; software and systems; mobile networking; and some miscellaneous topics in digital information and communications.

Biophysical Aspects of Transmembrane Signaling Sandor

Damjanovich,2005-05-20 Transmembrane signaling is one of the most significant cell biological events in the life and death of cells in general and lymphocytes in particular. Until recently biochemists and biophysicists were not accustomed to thinking of these processes from the side of a high number of complex biochemical events and an equally high number of physical changes at molecular and cellular levels at the same time. Both

types of researchers were convinced that their findings are the most decisive, having higher importance than the findings of the other scientist population. Both casts were wrong. Life, even at cellular level, has a number of interacting physical and biochemical mechanisms, which finally build up the creation of an excited cell that will respond to particular signals from the outer or inner world. This book handles both aspects of the signalling events, and in some cases tries to unify our concepts and help understand the signals that govern the life and death of our cells. Not only the understanding, but also the interference (e.g. medication) may depend on the full knowledge of both sides. These above statements are supported by the application of highly diverse physical and biochemical technologies demonstrated and explained by experts who are pioneers of their particular scientific field.

Information Security United States. Government Accountability Office, 2008 The loss of personally identifiable information can result in substantial harm, embarrassment, and inconvenience to individuals and may lead to identity theft or other fraudulent use of the information. As shown in prior GAO reports, compromises to such information and long-standing weaknesses in federal information security raise important questions about what steps federal agencies should take to prevent them. As the federal government obtains and processes information about individuals in increasingly diverse ways, properly protecting this information and respecting the privacy rights of individuals will remain critically important. GAO was requested to (1) identify the federal laws and guidance issued to protect personally identifiable information from unauthorized use or disclosure and (2) describe agencies progress in developing policies and documented procedures that respond to recent guidance from the Office of Management and Budget (OMB) to protect personally identifiable information that is either accessed remotely or physically transported outside an agency's secured physical perimeter. To do so, GAO reviewed relevant laws and guidance, surveyed officials at 24 major federal agencies, and examined and analyzed agency documents, including policies, procedures, and plans.
