International Standards for Food Safety Naomi Rees,David Watson,2000-04-30 This is one of the first books to draw together information and views about international control of food safety from around the world. Demands for safe food, against a background of increasing trade, are making international controls on food safety essential. Agreements on how to control the safety of food to meet these needs are now in place among the major trading blocks, particularly in Europe and in the USA, and more recently, in Australia. This book also describes progress in areas such as systematically reviewing risk from food; developing national infrastructures to enforce standards; and growing input from consumer groups and others, including economists, to the debate on how to set international food standards. Discussed in depth is the effort to achieve global standards for food safety under the auspices of the Codex Alimentarius Commission. There are chapters from world-leading experts on Codex, international control of radiological contamination, pesticides and veterinary drugs, and other chemical contaminants.

Handbook of Industrial Polyethylene and Technology Mark A. Spalding,Ananda Chatterjee,2017-10-12 This handbook provides an exhaustive description of polyethylene. The 50+ chapters are written by some of the most experienced and prominent authors in the field, providing a truly unique view of polyethylene. The book starts with a historical discussion on how low density polyethylene was discovered and how it provided unique opportunities in the early days. New catalysts are presented and show how they created an expansion in available products including linear low density polyethylene, high density polyethylene, copolymers, and polyethylene produced from metallocene catalysts. With these different catalysts systems a wide range of structures are possible with an equally wide range of physical properties. Numerous types of additives are presented that include additives for the protection of the resin from the environment and processing, fillers, processing aids, anti-fogging agents, pigments, and flame retardants. Common processing methods including extrusion, blown film, cast film, injection molding, and thermoforming are presented along with some of the more specialized processing techniques such as rotational molding, fiber processing, pipe extrusion, reactive extrusion, wire and cable, and foaming processes. The business of polyethylene including markets, world capacity, and future prospects are detailed. This handbook provides the most current and complete technology assessments and business practices for polyethylene resins.

Food Law for Public Health Jennifer L. Pomeranz,2015-10-20 Food and its many aspects -- production, consumption, marketing, labeling, procurement, safety -- have become a mainstay of both popular discourse and the practice of public health. As topics such as GMO labeling, food-borne illness outbreaks, soda bans, and food taxes have come to the forefront of the public and academic conscious, understanding the legal underpinnings of these issues is vital. Food Law for Public Health is the first book on food law written specifically for a public health audience without a legal background. It offers comprehensive coverage of every aspect of food law: · Established and newer food law issues in the United States · Overview of US law, plus federal, state, and local governments' authorities and limitations to address food for public health · Controversial topics related to food marketing, food labeling, and the various regulatory concerns over food safety · Federal nutrition programs and guidelines · Litigation among the food industry, consumers, and the government Food Law for Public Health offers necessary grounding in food law for audiences in public health, nutrition, food studies, policy, or anyone with a professional interest in this increasingly important area. With clear writing and thought-provoking questions and exercises for classroom discussion, it is an ideal tool for learning and teaching.

Intelligence, Biosecurity and Bioterrorism Patrick F. Walsh,2018-09-18 This book explores how potential bio-threats and risks may evolve post 9/11 given the rapid changes in biotechnology and synthetic biology. It also explores what role intelligence communities can play in understanding threats and risks. It argues that although bio-threats and risks are largely low probability and high impact in nature, intelligence in ‘Five Eyes’ countries remain insufficiently prepared to understand them. This book identifies key areas where intelligence reforms need to take place including a more strategic and systematic collaboration between national security/law enforcement intelligence and the scientific community. It is aimed at intelligence analysts, those in the scientific community working on health security threats, policy makers and researchers working on biosecurity and bioterrorism threats and risks.
