Why Peace Fails Charles T. Call, 2012-04-03 Why does peace fail? More precisely, why do some countries that show every sign of having successfully emerged from civil war fall once again into armed conflict? What explains why peace sticks after some wars but not others? In this illuminating study, Charles T. Call examines the factors behind fifteen cases of civil war recurrence in Africa, Asia, the Caucasus, and Latin America. He argues that widely touted explanations of civil war—such as poverty, conflict over natural resources, and weak states—are far less important than political exclusion. Call's study shows that inclusion of former opponents in postwar governance plays a decisive role in sustained peace. *Why Peace Fails* ultimately suggests that the international community should resist the temptation to prematurely withdraw resources and peacekeepers after a transition from war. Instead, international actors must remain fully engaged with postwar elected governments, ensuring that they make room for former enemies.

Seeking Viable Grassroots Representation Mechanisms in African Constitutions Charles Mwalimu, 2009 In this book Charles Mwalimu explores viable grassroots representation mechanisms in African constitutions in order to positively integrate indigenous and modern systems in Sub-Saharan Africa. A comparative study method is used to examine the constitutional principles of chieftaincy and local government and their impact on human rights. To

establish and prove lack of positive integration Mwalimu connects this failure to poor constitutionalism, development and stultified growth and human rights violations. This book proposes remedial actions to build nondiscriminatory constitutional regimes eradicating violations of human rights.

The Political Economy of the Kimberley Process Nathan Munier, 2020-09-03
Investigating state responses to the Kimberley Process, an ambitious international agreement meant to reduce the trade of conflict diamonds, this study looks at the political economy of resource-wealthy states in Africa to understand why some African states have higher levels of compliance and co-operation than others.

The Trans Pacific Partnership, China and India Amitendu Palit, 2014-06-05
The United States and 11 other countries from both sides of the Pacific are currently negotiating the Trans-Pacific Partnership (TPP). The agreement is expected to set new benchmark for international trade through its comprehensive coverage of issues and binding regulations. It is expected to eventually mature into a regional trade agreement covering the entire Asia-Pacific. As of now, it does not include China and India, the two largest emerging markets and regional economies. The TPP has generated controversy for its excessive emphasis on trade issues, which have remained unresolved or unaddressed at the WTO due to differences between developed and emerging markets. It has also been criticized for adopting a negotiating style

reflecting the US regulatory approach to international trade and also as a geo-political strategy of the US for supporting its strategic rebalancing towards Asia. From both economic and geo-political perspectives, the TPP has various significant implications for China and India that are examined in the book. This book sheds light on how China and India's entries in the TPP are mutually beneficial and how both countries can gain from the TPP by gaining preferential access to large markets and using it as an opportunity for introducing more outward-oriented reforms. The book also cautions that US must reconcile to the rebalancing of economic power within the grouping that will occur following the entries of China and India. Otherwise, the TPP and China and India might walk divergent paths and trade and regional integration in Asia-Pacific may not ever converge. This book will interest anyone who wishes to learn more about the TPP and its future implications and challenges and China and India's roles in global and regional trade.

Bushmeat Theodore Trefon, 2023-06-15 In much of Central Africa, eating wildlife is seen as a normal, desirable and common-sense practice. Almost all wild animals, from the largest mammals to the smallest invertebrates, are hunted, traded and consumed, providing vital income and nutrition for millions of people. But as demand for bushmeat grows, animal populations are being decimated, directly impacting biodiversity, local economies and public health. Taking an interdisciplinary approach, *Bushmeat* explores questions ranging from deforestation and conservation strategies to infectious

diseases, urban street food and law enforcement. It explains how the popularity of wild meat consumption has spread from rural areas into major cities, fueled by rapid urbanization, poorly defined regulations, and developing trade networks-whether small-scale and informal, or commercial and politically connected. While unsustainable hunting practices pose clear problems for wildlife conservation, they also increase the risk of rural food insecurity and of new infectious diseases emerging-as HIV, Ebola and Covid-19 have shown. But cultural attachment to wild meat, and its dietary importance for many communities, make the bushmeat crisis difficult to solve. Based on extensive interviews and a comprehensive review of secondary literature, *Bushmeat* presents a startling account of one of the Anthropocene's catastrophes in the making.

The Oxford Encyclopedia of Economic History Joel Mokyr, 2003-10-16 What were the economic roots of modern industrialism? Were labor unions ever effective in raising workers' living standards? Did high levels of taxation in the past normally lead to economic decline? These and similar questions profoundly inform a wide range of intertwined social issues whose complexity, scope, and depth become fully evident in the Encyclopedia. Due to the interdisciplinary nature of the field, the Encyclopedia is divided not only by chronological

and geographic boundaries, but also by related subfields such as agricultural history, demographic history, business history, and the histories of technology, migration, and transportation. The articles, all written and signed by international contributors, include scholars from Europe, Latin America, Africa, and Asia. Covering economic history in all areas of the world and segments of economies from prehistoric times to the present, The Oxford Encyclopedia of Economic History is the ideal resource for students, economists, and general readers, offering a unique glimpse into this integral part of world history.

Tally-Ho Patrick G. Eriksson, 2023-02-15 Have the squadron leaders over southern England in that long autumn of 1940, and their supporting flight commanders who led the squadrons into battle, had been neglected in the history books? Patrick Eriksson thinks so.

Race and Human Rights Curtis Stokes, 2008-10-16 The terrorist attacks against U.S. targets on September 11, 2001, and the subsequent wars in Afghanistan and Iraq, sparked an intense debate about human rights. According to contributors to this provocative book, the discussion of human rights to date has been far too narrow. They argue that any conversation about human rights in the United States must include equal rights for all residents. Essays examine the historical and intellectual context for the modern debate about human rights, the racial implications of the war on terrorism, the intersection of racial oppression, and the national security state. Others

look at the Pinkerton detective agency as a forerunner of the Federal Bureau of Investigation, the role of Africa in post-World War II American attempts at empire-building, and the role of immigration as a human rights issue.

Handbook of the History of Religions in China I Zhongjian Zhan, Jian Mu,2020-10-27 This book is part of an initiative in cooperation with renowned Chinese publishers to make fundamental, formative, and influential Chinese thinkers available to a western readership, providing absorbing insights into Chinese reflections of late, and offering a chance to grasp today's China. In their influential book *Handbook of the History of Religions in China*, Zhongjian Mou and Jian Zhang present a panorama of the religions existing in China through time. In their fascinating *History*, they delineate the emergence and development of Daoism, Buddhism, Confucianism, Islam, and Christianity and explore the roles they played in Chinese society and the interrelations between them. In China, also due to the encompassing Confucian idea of "living together harmoniously while maintaining differences," religions—including newly arrived ones—came closer together than anywhere else in the world and reached a unique level of peaceful societal coexistence. Despite many frictions and conflicts, communication and reconciliation were indisputably predominant in China throughout history. Buddhism was peacefully introduced into China and, later on, a harmonious, symbiotic syncretism of Confucianism, Buddhism, and Daoism developed—an

exemplary process of how a diverse set of different religions can complement each other and contribute to a better life.

The Political Economy of Japanese Trade Policy Aurelia George

Mulgan,Masayoshi Honma,2015-08-11 This study provides up-to-date coverage of the most important domestic and external political and economic influences on Japanese trade policy, as well as the evolutionary dynamics of that policy in the post-war period.

The Many Not The Few Richard North,2013-03-05 Immortalized in Churchill's often quoted assertion that never before was so much owed by so few, the top-down narrative of the Battle of Britain has been firmly established in British legend: Britain was saved from German invasion by the gallant band of Fighter Command Pilots in their Spitfires and Hurricanes, and the public owed them their freedom. Richard North's radical re-evaluation of the Battle of Britain dismantles this mythical retelling of events. Taking a wider perspective than the much-discussed air war, North takes a fresh look at the conflict as a whole to show that the civilian experience, far from being separate and distinct, was integral to the Battle. This recovery of the people's stolen history demonstrates that Hitler's aim was not the military conquest of England, and that his unattained target was the hearts and minds of British people.

Parallel Encounters Gillian Roberts, David Stirrup, 2014-03-24 The essays collected in offer close analysis of an array of cultural representations of the Canada–US border, in both site-specificity and in the ways in which they reveal and conceal cultural similarities and differences. Contributors focus on a range of regional sites along the border and examine a rich variety of expressive forms, including poetry, fiction, drama, visual art, television, and cinema produced on both sides of the 49th parallel. The field of border studies has hitherto neglected the Canada–US border as a site of cultural interest, tending to examine only its role in transnational policy, economic cycles, and legal and political frameworks. Border studies has long been rooted in the US–Mexico divide; shifting the locus of that discussion north to the 49th parallel, the contributors ask what added complications a site-specific analysis of culture at the Canada–US border can bring to the conversation. In so doing, this collection responds to the demands of Hemispheric American Studies to broaden considerations of the significance of American culture to the Americas as a whole—bringing Canadian Studies into dialogue with the dominantly US-centric critical theory in questions of citizenship, globalization, Indigenous mobilization, hemispheric exchange,

and transnationalism.

Regulating Safety of Traditional and Ethnic Foods V. Prakash, Olga Martin-Belloso, Larry Keener, Siân B. Astley, Susanne Braun, Helena McMahon, Huub Lelieveld, 2015-11-25 *Regulating Safety of Traditional and Ethnic Foods*, a compilation from a team of experts in food safety, nutrition, and regulatory affairs, examines a variety of traditional foods from around the world, their risks and benefits, and how regulatory steps may assist in establishing safe parameters for these foods without reducing their cultural or nutritive value. Many traditional foods provide excellent nutrition from sustainable resources, with some containing nutraceutical properties that make them not only a source of cultural and traditional value, but also valuable options for addressing the growing need for food resources. This book discusses these ideas and concepts in a comprehensive and scientific manner. Addresses the need for balance in safety regulation and retaining traditional food options Includes case studies from around the world to provide practical insight and guidance Presents suggestions for developing appropriate global safety standards

Food Safety and Quality Systems in Developing Countries André Gordon, 2020-04-30 *Food Safety and Quality Systems in Developing Countries: Volume III: Technical and Market Considerations* is a practical resource for

companies seeking to supply food products from developing countries to developed country markets or to transnational business located in developing countries. It explores practical approaches to complying with food safety and quality systems requirements, backed by the science-based approaches used in the major markets applied in a developing country context. It explores the topic from the perspective of agribusiness value chains and includes deconstructions of regulatory and market channel-specific technical requirements in North America, Europe, and other major markets. Volume III builds on the platforms laid by the previous two volumes, providing guidance from industry-leading experts on addressing regulatory and market-specific microbiological, chemical, packaging and labelling, supply chain, and systems-related food safety and quality compliance requirements. This book addresses technical and market-determined standards that value chain participants in developing countries face supplying developed country markets or transnational firms, including hotels, major multiples, and quick serve restaurant brands. Provides detailed, scientific, and technical information to assist food safety and marketing professionals operating in the global market Helps farmers, processors, exporters, food scientists and technologists, regulators, students, and other stakeholders in the global food industry understand and apply tailored technical and scientific information to their food industry sector Uses specific real-world examples of systems implementation, supported by case studies and the required

scientific and marketing inputs in a range of product categories including fruits and vegetables, sauces and spices, beverages, produce staples, dairy products, seafood, and others

The Age of Living Machines: How Biology Will Build the Next Technology Revolution Susan Hockfield, 2019-05-07 From the former president of MIT, the story of the next technology revolution, and how it will change our lives. A century ago, discoveries in physics came together with engineering to produce an array of astonishing new technologies: radios, telephones, televisions, aircraft, radar, nuclear power, computers, the Internet, and a host of still-evolving digital tools. These technologies so radically reshaped our world that we can no longer conceive of life without them. Today, the world's population is projected to rise to well over 9.5 billion by 2050, and we are currently faced with the consequences of producing the energy that fuels, heats, and cools us. With temperatures and sea levels rising, and large portions of the globe plagued with drought, famine, and drug-resistant diseases, we need new technologies to tackle these problems. But we are on the cusp of a new convergence, argues world-renowned neuroscientist Susan Hockfield, with discoveries in biology coming together with engineering to produce another array of almost inconceivable technologies—next-generation products that have the potential to be every bit as paradigm shifting as the twentieth century's digital wonders. The Age of Living Machines describes some of the most exciting new developments and the scientists and engineers

who helped create them. Virus-built batteries. Protein-based water filters. Cancer-detecting nanoparticles. Mind-reading bionic limbs. Computer-engineered crops. Together they highlight the promise of the technology revolution of the twenty-first century to overcome some of the greatest humanitarian, medical, and environmental challenges of our time.
