Paganism, Traditionalism, Nationalism Kaarina Aitamurto,2016-05-05 Rodnoverie was one of the first new religious movements to emerge following the collapse of the Soviet Union, its development providing an important lens through which to view changes in post-Soviet religious and political life. Rodnovers view social and political issues as inseparably linked to their religiosity but do not reflect the liberal values dominant among Western Pagans. Indeed, among the conservative and nationalist movements often associated with Rodnoverie in Russia, traditional anti-Western and anti-Semitic rhetoric has recently been overshadowed by anti-Islam and anti-migrant tendencies. Providing a fascinating overview of the history, organisations, adherents, beliefs and practices of Rodnoverie this book presents several different narratives; as a revival of the native Russian or Slavic religion, as a nature religion and as an alternative to modern values and lifestyles. Drawing upon primary sources, documents and books this analysis is supplemented with extensive fieldwork carried out among Rodnoverie communities in Russia and will be of interest to scholars of post-Soviet society, new religious movements and contemporary Paganism in general.

SQL Tuning Dan Tow,2003-11-19 A poorly performing database application not only costs users time, but also has an impact on other applications running on the same computer or the same network. SQL Tuning provides an essential next step for SQL developers and database administrators who want to extend their SQL tuning expertise and get the most from their database applications. There are two basic issues to focus on when tuning SQL: how to find and interpret the execution plan of an SQL statement and how to change SQL to get a specific alternate execution plan. SQL Tuning provides answers to these questions and addresses a third issue that's even more important: how to find the optimal execution plan for the query to use. Author Dan Tow outlines a timesaving method he's developed for finding the optimum execution plan--rapidly and systematically--regardless of the complexity of the SQL or the database platform being used. You'll learn how to understand and control SQL execution plans and how to diagram SQL queries to deduce the best execution plan for a query. Key chapters in the book include exercises to reinforce the concepts you've learned. SQL Tuning concludes by addressing special concerns and unique solutions to unsolvable problems. Whether you are a programmer who develops SQL-based applications or a database administrator or other who troubleshoots poorly tuned applications, SQL Tuning will arm you with a reliable and deterministic method for tuning your SQL queries to gain optimal performance.

*Climate Change Impact on Livestock: Adaptation and Mitigation* Veerasamy Sejian,John Gaughan,Lance Baumgard,Cadaba Prasad,2015-03-31 This volume addresses in detail both livestock's role in climate change and the impacts of climate change on livestock production and reproduction. Apart from these cardinal principles of climate change and livestock production, this volume also examines the various strategies used to mitigate livestock-related GHG emissions, and those which can reduce the impacts of climate change on livestock production and reproduction. Presenting information and case studies collected and analyzed by professionals working in diversified ecological zones, the book explores the influence of climate change on livestock production across the globe. The most significant feature of this book is that it addresses in detail the different adaptation strategies and identifies targets for different stakeholders in connection with climate change and livestock production. Further, it puts forward development plans that will allow the livestock industries to cope with current climate changes and strategies that will mitigate the effects by 2025. Lastly, it provides researchers and policymakers several researchable priorities to help develop economically viable solutions for livestock production with less GHG emissions, promoting a cleaner environment in which human beings and livestock can live in harmony without adverse effects on productivity. Given that livestock production systems are sensitive to climate change and at the same are themselves a contributor to the phenomenon, climate change has the potential to pose an increasingly formidable challenge to the development of the livestock sector. However, there is a dearth of scientific information on adapting livestock production to the changing climate; as such, well-founded reference material on sustaining livestock production systems under the changing climate scenarios in different agro-ecological zones of the world is essential. By methodically and extensively addressing all aspects of climate change and livestock production, this volume offers a valuable tool for understanding the hidden intricacies of climatic stress and its influence on livestock production.

Innovative Saline Agriculture J.C. Dagar,P.C. Sharma,D.K. Sharma,A.K. Singh,2016-08-10 The land degradation due to salinity and waterlogging is a global phenomenon, afflicting about one billion hectares within the sovereign borders of at least 75 countries. Besides staring at the food security, it has far reaching and unacceptable socio-economic consequences since a large proportion of this land is inhabited by smallholder farmers. The anthropogenic-environmental changes and the climate change are further adding to the problem of salinity and waterlogging. The phenomenon of sea-level rise will bring more areas under waterlogged salinity due

to inundation by sea water. Thus, dealing with the salinity in reality is becoming a highly onerous task owing to its complex nature, uncertainty and differential temporal and spatial impacts. Nevertheless, with the need to provide more food, feed, fuel, fodder and fiber to the expanding population, and non-availability of new productive land, there is a need for productivity enhancement of these lands. In fact, the salt-affected and waterlogged lands cannot be neglected since huge investments have been made throughout the world in the development of irrigation and drainage infrastructure. The social, economic and environmental costs being high for the on- and off-farm reclamation techniques, saline agriculture including agroforestry inculcated with modern innovative techniques, is now emerging as a potential tool not only for arresting salinity and waterlogging but for other environmental services like mitigate climate change, sequester carbon and biodiversity restoration. This publication attempts to address a wide range of issues, principles and practices related to the salinity involved in rehabilitation of waterlogged saline soils and judicious use of saline waters including sea water. Many of the site specific case studies typical to the saline environment including coastal ecologies sustaining productivity, rendering environmental services, conserving biodiversity and mitigating climate change have been described in detail. Written by leading researchers and experts of their own fields, the book is a must, not only for salinity experts but also for policy makers, environmentalists, students and educationists alike. More importantly, it contributes to reversing the salinity trends and teaches to sustain with salinity ensuring the livelihood of resource-poor farming families leaving in harsh ecologies including coastal areas which are more vulnerable to climate change.

**Effects of water availability on goat farming in Jordan** Ja'far Al-Khaza'leh, 2015-05-18 A sufficient supply of good quality drinking water is essential for health and productivity of livestock. In Jordan, goat production is an integral part of farming systems and plays a significant role for the food security of rural households. Jordan is one of the poorest countries in the world in terms of water availability with no positive prognosis due to its susceptibility to the impacts of climate change. This study evaluates the seasonal availability, quality, accessibility and utilization of goats' drinking water sources in different production systems of two agro-ecological zones in the Karak Governorate in southern Jordan, investigates the perception of farmers about breed differences with respect to their tolerance to water restrictions and production, and assesses the productive and economic performance of goats under different production systems and conditions of water availability with emphasis on water as a core element. Methods used comprised a questionnaire survey with 120 goat keepers, focus group discussions, laboratory analysis of water quality parameters, on-farm measurements of goat body weight and evaluation of body condition score.

**The Hydropolitics of Africa** Raj Bardouille, Mechthild Nagel, Muna Ndulo, 2008-12-11 Water is both an essential resource and a source of disease and conflict in contemporary Africa. And we begin to learn that far distant processes of consumption and pollution can have their impact on the water systems of Africa: global warming produced by the material culture of the first world threatens the weather systems and very survival of developing countries. In this context, this volume – the product of an expert meeting at Cornell University's Institute for African Development – traces and tracks the dynamics of the contemporary hydropolitics of Africa. The volume contains a variety of approaches to the study of the organisation of water within Africa ranging from technical essays on water borne diseases, through institutional analyses of the legal and political arrangements around the distribution of water to social policy analyses of the unmet demand for water amongst Africa's poor. Taken as a whole, the volume provides the reader with a useful reference work on the contemporary hydropolitics of Africa whilst simultaneously providing a lively introduction to a critical and much neglected area of African development policy.

**Proceedings, Second Expert Meeting on Harmonizing Forest-Related Definitions for Use by Various Stakeholders** , 2002 The objectives of the meeting were to (i) recommend options for harmonizing forest-related definitions, (ii) make proposals for the implementation of these options, and (iii) establish a commonly agreed upon future agenda. It was expected to thus contribute towards improving efficiency of processes in different international policies related to forests. It was clearly stated that harmonization does not mean standardization. **World Drug Report 2008** United Nations Office on Drugs and Crime, 2008-06-26 The Report continues to provide in-depth trend analysis of the four main drug markets in its first section. In addition, to mark the one hundred year anniversary of the Shanghai Opium Commission, and one hundred years of international drug control, the Report contains an in-depth look at the development of the international drug control system. The Report also contains a small statistical annex which provides a detailed look at production, prices and consumption. As in previous years, the present Report is based on data obtained primarily from the annual reports questionnaire (ARQ) sent by Governments to UNODC in 2007, supplemented by other sources when necessary and where available. Two of the main limitations herein are: (i) that ARQ reporting is not systematic enough, both in terms of number of countries responding and of content, and (ii) that most countries lack the adequate monitoring systems required to produce reliable, comprehensive and internationally comparable data. National monitoring systems are, however, improving and UNODC has contributed to this process.

Chadwell, 2015-09-07 The chapters in this book address the growing endeavours of shared print repositories and programs in academic libraries, representing a global perspective with authors from Canada, Australia, Great Britain, and the United States. This book illustrates the complicated processes and challenges of coordinating selection, determining storage agreements (distributed or shared), ownership concerns, business models, and a host of collection maintenance issues. These efforts entail immense collaboration, regardless of the size of the project. Luckily, librarians are good at collaboration, but not always good at forging ahead into an uncertain future with regard to print collections.
