Pirates of Pensacola Keith Thomson,2005-04 The Cooke and Hood families have been at each other's throats since the Spanish Main days. The latest chapter in their piratic rivalry takes place in 2004, when an old treasure map turns up. None of this seems to matter to Morgan Cooke, a cowardly, landlubbing accountant entirely ignorant of his heritage until his estranged father, Isaac, in need of crewmen, kidnaps him and thrusts him into the fray. When Morgan wakes up on a boat in the middle of the Caribbean, he learns that piracy still flourishes, albeit with far more discretion than in the old days--pirates disguise their fast boats as shrimpers or tugs--but with no less bloodshed. Judging even a shot at riches vastly preferable to a return to his lonely, fluorescent-lit work station existence, Morgan pierces his ear, dons the eye patch and peg leg, and set sail for glorious adventure.

The Craft of Scientific Presentations Michael Alley, 2006-05-17 This timely and hugely practical work provides a score of examples from contemporary and historical scientific presentations to show clearly what makes an oral presentation effective. It considers presentations made to persuade an audience to adopt some course of action (such as funding a proposal) as well as presentations made to communicate information, and it considers these from four perspectives: speech, structure, visual aids, and delivery. It also discusses computer-based projections and slide shows as well as overhead projections. In particular, it looks at ways of organizing graphics and text in projected images and of using layout and design to present the information efficiently and effectively.

Cinema of Outsiders Emanuel Levy, 1999-09-01 A Los Angeles Times Bestseller The most important development in American culture of the last two decades is the emergence of independent cinema as a viable alternative to Hollywood. Indeed, while Hollywood's studios devote much of their time and energy to churning out big-budget, star-studded event movies, a renegade independent cinema that challenges mainstream fare continues to flourish with strong critical support and loyal audiences. *Cinema of Outsiders* is the first and only comprehensive chronicle of contemporary independent movies from the late 1970s up to the present. From the hip, audacious early works of maverick David Lynch, Jim Jarmusch, and Spike Lee, to the contemporary Oscar-winning success of indie dynamos, such as the Coen brothers (*Fargo*), Quentin Tarantino (*Pulp Fiction*), and Billy Bob Thornton (*Sling Blade*), Levy describes in a lucid and accessible manner the innovation and diversity of American indies in theme, sensibility, and style. Documenting the socio-economic, political and artistic forces that led to the rise of American independent film, *Cinema of Outsiders* depicts the pivotal role of indie guru Robert Redford and his Sundance Film Festival in creating a showcase for indies, the function of film schools in supplying talent, and the continuous tension between indies and Hollywood as two distinct industries with their own structure, finance, talent and audience. Levy describes the major cycles in the indie film movement: regional cinema, the New York school of film, African-American, Asian American, gay and lesbian, and movies made by women. Based on exhaustive research of over 1,000 movies made between 1977 and 1999, Levy evaluates some 200 quintessential indies, including *Choose Me*, *Stranger Than Paradise*, *Blood Simple*, *Blue Velvet*, *Desperately Seeking Susan*, *Slacker*, *Poison*, *Reservoir Dogs*, *Gas Food Lodging*, *Menace II Society*, *Clerks*, *In the Company of Men*, *Chasing Amy*, *The Apostle*, *The Opposite of Sex*, and *Happiness*. *Cinema of Outsiders* reveals the artistic and political impact of bold and provocative independent movies in displaying the cinema of outsiders—the cinema of the other America.

Optical Design for Biomedical Imaging Rongguang Liang,2010 Designing an efficient imaging system for biomedical optics requires a solid understanding of the special requirements of the optical systems for biomedical imaging and the optical components used in the systems. However, a lack of reference books on optical design (imaging and illumination) for biomedical imaging has led to some inefficient systems. This book fills the gap between biomedical optics and optical design by addressing the fundamentals of biomedical optics and optical engineering, and biomedical imaging systems. The first half provides a brief introduction to biomedical optics and then covers the fundamentals of optics, optical components, light sources, detectors, optical imaging system design, and illumination system design. This also includes important issues related to biomedical imaging, such as autofluorescence from optical materials. The second half of the text covers various biomedical imaging techniques and their optical systems, along with design examples.
