Lean In Sheryl Sandberg, 2013-03-11 The #1 international best seller In Lean In, Sheryl Sandberg reignited the conversation around women in the workplace. Sandberg is chief operating officer of Facebook and coauthor of Option B with Adam Grant. In 2010, she gave an electrifying TED talk in which she described how women unintentionally hold themselves back in their careers. Her talk, which has been viewed more than six million times, encouraged women to “sit at the table,” seek challenges, take risks, and pursue their goals with gusto. Lean In continues that conversation, combining personal anecdotes, hard data, and compelling research to change the conversation from what women can’t do to what they can. Sandberg provides practical advice on negotiation techniques, mentorship, and building a satisfying career. She describes specific steps women can take to combine professional achievement with personal fulfillment, and demonstrates how men can benefit by supporting women both in the workplace and at home. Written with humor and wisdom, Lean In is a revelatory, inspiring call to action and a blueprint for individual growth that will empower women around the world to achieve their full potential.

The Grant Writing Guide Betty S. Lai, 2023-01-10 Grant writing skills are critical for researchers. According to author Betty Lai, a study of 92 institutions found that 67% listed grant-funding as a major criterion for promotion and tenure. Yet many scholars do not receive grant writing training. Addressing this need, The Grant Writing Guide is a concrete roadmap intended specifically for scholars for learning how to write fundable grants. This book walks academic readers through steps to generate ideas, determine which grants help create in career advancement, find the right funder, and write in a way that excites reviewers and funders. Organized into 14 brief chapters, every chapter is designed to build grant-writing skills. Drawing from interviews with 100 grant writers, program officers, administrators, writers, and researchers in every phase of their career, the Grant Writing Guide lays out best practices, common questions, and pitfalls to avoid. Important topics covered will include finding available grants, generating ideas aligned with one's values, furthering one's career goals, creating effective pitches, talking to program officers, completing grant applications and structuring timelines, communicating clearly in prose and images, and soliciting feedback to strengthen your proposal. Chapters will open with stories from successful grant writers about the skill. Chapters will then describe and teach the skill. Chapters will end with an exercise designed to help researchers develop the skill While this book is intended specifically for academics, Dr. Lai has strived to incorporate advice and examples that will resonate with women as well as scholars from non-traditional backgrounds

Agent-Oriented Information Systems II Paolo Bresciani, Paolo Giorgini, Brian Henderson-Sellers, Graham Low, Michael Winikoff, 2005-05-10 Information systems have become the backbone of all kinds of organizations - day. In almost every sector - manufacturing, education, health care, government and businesses large and small - information systems are relied upon for - eryday work, communication, information gathering and decision-making. Yet, the in?exibilities in current technologies and methods have also resulted in poor performance, incompatibilities and obstacles to change. As many organizations are reinventing themselves to meet the challenges of global competition and e-commerce, there is increasing pressure to develop and deploy new technologies that are ?exible, robust and responsive to rapid and unexpected change. Agent concepts hold great promise for responding to the new realities of - formation systems. They o?er higher-level abstractions and mechanisms which address issues such as knowledge representation and reasoning, communication, coordination, cooperation among heterogeneous and autonomous parties, p- ception, commitments, goals, beliefs, intentions, etc., all of which need conc- tual modelling. On the one hand, the concrete implementation of these concepts can lead to advanced functionalities, e.g., in inference-based query answering, transaction control, adaptive work ?ows, brokering and integration of disparate information sources, and automated communication processes. On the other hand, their rich representational capabilities allow for more faithful and ?- ible treatments of complex organizational processes, leading to more e?ective requirements analysis and architectural/detailed design.

Integrative Document & Content Management Len Asprey, Michael Middleton, 2003-01-01 Portals present unique strategic challenges in the academic environment. Their conceptualization and design requires the input of campus constituents who seldom interact and whose interests are often opposite. The implementation of a portal requires a coordination of applications and databases controlled by different campus units at a level that may never before have been attempted at the institution. Building a portal is as much about constructing intra-campus bridges as it is about user interfaces and content. Designing Portals: Opportunities and Challenges discusses the current status of portals in higher education by providing insight into the role portals play in an institution's business and educational strategy, by taking the reader through the processes of conceptualization, design, and implementation of the portals (in different stages of development) at major universities and by offering insight from three producers of portal software systems in use at institutions of higher learning and elsewhere.
