Intersensory Perception and Sensory Integration Richard D. Walk, Herbert L. Pick, 2013-03-08 This volume on intersensory perception and sensory integration is the second volume of the series, *Perception and Perceptual Development: A Critical Review Series*. The topic of the volume is timely, for in recent years, many investigators have noted that information about any natural event is obtained by a perceiver from a variety of sources. Such an observation immediately leads to the question of how this information is synthesized and organized. Of course, the implication that there are several discrete input channels that must be processed has come under immediate attack by researchers such as the Gibsons. They find it extremely artificial to regard natural information as being cut up and requiring cementing. Nevertheless, the possibility that during ontogenesis, perception involves the integration of separate information has attracted the attention of scholars concerned with both normal and abnormal development. In the case of normal development, a lively controversy has arisen between those who believe perceptual development goes from integration toward differentiation and those who hold the opposite view. In the case of abnormal psychological development such as learning disabilities, many workers have suggested that perceptual integration is at fault. In thinking about the issues raised in this volume, we are particularly indebted to our former teachers and colleagues: Eleanor and James Gibson, T. A. Ryan, Robert B. MacLeod, and Jerome Bruner. We are pleased to acknowledge the secretarial help of Karen Weeks in the preparation of this volume.

Children's Thinking David F. Bjorklund, Kayla B. Causey, 2017-01-04 The Sixth Edition of David F. Bjorklund and Kayla B. Causey's topically organized *Children's Thinking* presents a current, comprehensive, and dynamic examination of cognitive development. The book covers individual children and their developmental journeys while also following the general paths of overall cognitive development in children. This unique and effective approach gives readers a holistic view of children's cognitive development, acknowledging that while no two children are exactly alike, they tend to follow similar developmental patterns. Supported by the latest research studies and data, the Sixth Edition provides valuable insights for readers to better understand and work with children.

The Development of Intersensory Perception David J. Lewkowicz, Robert Lickliter, 2013-05-13 This book provides the latest information about the development of intersensory perception -- a topic which has recently begun to receive a great deal of attention from researchers studying the general problem of perceptual development. This interest was inspired after the realization that unimodal perception of sensory information is only the first stage of perceptual processing. Under normal conditions, an organism is faced with multiple, multisensory sources of information and its task is to either select a single relevant source of information or select several sources of information and integrate them. In general, perception and action on the basis of multiple sources of information is more efficient and effective. Before greater efficiency and effectiveness can be achieved, however, the organism must be able to integrate the multiple sources of information. By doing so, the organism can then achieve a coherent and unified percept of the world. The various chapters in this book examine the developmental origins of intersensory perceptual capacities by presenting the latest research on the development of intersensory perceptual skills in a variety of different species. By adopting a comparative approach to this problem, this volume as a whole helps uncover similarities as well as differences in the mechanisms underlying the development of intersensory integration. In addition, it shows that there is no longer any doubt that intersensory interactions occur right from the beginning of the developmental process, that the nature of these intersensory interactions changes as development progresses, and that early experience contributes in important ways to these changes.

A Moving Child Is a Learning Child Gill Connell, Cheryl McCarthy, 2013-11-13 In order to learn, kids' need to move! Grounded in best practices and current research, this hands-on resource connects the dots that link brain activity, movement, and early learning. The expert authors unveil the Kinetic Scale: a visual map of the active learning needs of infants, toddlers, preschoolers, and primary graders that fits each child's individual timetable. Teachers, parents, and caregivers will find a wealth of information, actionable tips, and games they can use to support children's healthy development—all presented in a lively, full-color format with demonstrative diagrams and photos. A final section offers easy-to-implement activities geared to the Kinetic Scale. Downloadable digital content includes printable charts, games, and activities from the book plus a PowerPoint presentation for professional development, parent handouts, and bonus activities. An ideal tool for coaches, mentors, and trainers. Introducing the Kinetic Scale unique framework encompassing all the elements of movement: reflexes, sensory tools (sight, hearing, smell, taste, touch, balance, and intuition), motor tools (power, coordination, and control), and language based on six stages of movement development from birth to age 7: snugglers, squiggles, stompers, scampers, scooters, and skedaddlers designed to foster a balanced diet of physical activity that helps each child move, grow, and learn on the child's individual timetable

Sensory Integration Michael C. Abraham, C.A.P.E., 2002-01-02 Addressing the needs of children with sensory integration dysfunction, this handbook offers practical, detailed information. Using the tools provided, teachers can make careful observations to understand sensory problems. By recognizing a child's underlying difficulties, such as hypersensitivity or hyposensitivity to touch and movement, appropriate activities can be planned. The list of suggested strategies cover a wide range of specific needs. Categories include poor posture, clumsiness/poor coordination, excessive restlessness, fine motor problems, trouble with attention, learning behavior, weakness or floppiness of arms or legs, and bilateral integration problems. Working closely with occupational therapists, teachers can use the intervention techniques to enhance the abilities of children with sensory integration dysfunction.

Handbook of Child Psychology, Theoretical Models of Human Development William Damon, Richard M. Lerner, 2006-05-19 Part of the authoritative four-volume reference that spans the entire field of child development and has set the standard against which all other scholarly references are compared. Updated and revised to reflect the new developments in the field, the *Handbook of Child Psychology, Sixth Edition* contains new chapters on such topics as spirituality, social understanding, and non-verbal communication. Volume 1: *Theoretical Models of Human Development*, edited by Richard M. Lerner, Tufts University, explores a variety of theoretical approaches, including life-span/life-course theories, socio-culture theories, structural theories, object-relations theories, and diversity and development theories. New chapters cover phenomenology and ecological systems theory, positive youth development, and religious and spiritual development.

Vertigo and Balance Disorders in Children Kimitaka Kaga, 2014-02-10 Many congenitally deaf infants and children suffer vestibular failure, which produces problems with their postural control, locomotion and gait. However it is known that these children can eventually catch up with their normal balance control status in terms of development and growth as a result of central vestibular compensation. In *Vertigo and Balance Disorders in Children* the author provides comprehensive and integrative information on the vestibular system. The materials presented range from the history of its study, basic anatomy and physiology of vestibular organs, mechanism of balance and motor function development, to clinical aspects of vestibular disorders including their evaluation and pediatric neurology. Although there have been books discussing postural responses of infants and children with vestibular disorders, this is the first to present the influence of peripheral vestibular disorders and central vestibular compensation comprehensively. This book will benefit not only practitioners in this field such as pediatric

otolaryngologists, pediatricians, child neurologists and neurologists, but also clinical specialists such as neonatologists, physical therapists and speech therapists, helping them to better care for patients with vestibular failure.

Ethics, Disability and Sports Ejgil Jespersen, Mike J. McNamee, 2013-10-18 This volume addresses a range of philosophical and ethical issues in adapted physical activity and disability sports participation more broadly. It is comprised of a range of essays by international scholars whose backgrounds embrace different traditions of philosophy, pedagogy and adapted physical activity. The principal aim of the symposium was to open up and critically explore a range of conceptual and ethical issues and perspectives that have arisen with respect to the engagement of persons with dis/abilities in a range of physical activity contexts including, but not exclusively located in, mainstream sporting activities. This book was published as a special issue in *Sport, Ethics and Philosophy*.

Children's Thinking Robert S. Siegler, 1998 Author is an alumnus of Evanston Township High School from the class of 1966.

The Psychology of Touch Morton A. Heller, 2013-11-12 Designed to make research on touch understandable to those not specifically involved in tactile research, this book provides broad coverage of the field. It includes material on sensory physiology and psychophysics, thermal sensibility, pain, pattern participation, sensory aids, and tactile perception in blind people. While the volume is important for researchers in the area of touch, it should also prove valuable to a broad audience of experimental and educational psychologists, and health professionals. The book should also be of interest to scientists in perception, cognition, and cognitive science, and can be used as a supplementary reader for courses in sensation and perception.

Sensory Integration and Self-regulation in Infants and Toddlers G. Gordon Williamson, Marie E. Anzalone, 2001 Some children require a great deal of assistance to overcome difficulties in taking in and responding to information from their senses, and to achieve the levels of self-regulation they need to interact with and explore the world around them. This monograph, targeted to a wide array of disciplines from the medical, therapeutic, educational, mental health, and psychosocial fields, presents information on the sensory development of children from birth to 3 years. The monograph describes assessment and intervention approaches designed to promote very young children's self-regulation and adaptive behavior, and discusses new directions and outstanding questions in basic and applied research. Chapter 1 describes the modalities through which infants and toddlers receive sensory input from the environment and their bodies, and introduces the concept of sensory integration, which involves organizing sensation for adaptive use. Chapter 2 provides a framework for understanding how the sensory integrative process is revealed in the behavior of infants and young children, particularly with respect to arousal, attention, affect, and action. Chapter 3 introduces the concepts of sensory modulation and praxis, and introduces several frameworks for classifying problems in sensory integration and self-regulation. Chapter 4 presents guidelines and methods for the screening and assessment of sensory integration, and discusses interpretation of assessment data, leading to intervention planning. Chapter 5 addresses the needs of parents, the importance of modifying the sensory environment, and the nature of clinical reasoning during direct intervention; this chapter also provides intervention guidelines with accompanying case studies for children with hyperreactivity, hyporeactivity, and dyspraxia. Two appendices discuss play in the context of sensory-based intervention and describe strategies to enhance self-initiation and adaptive behavior. (Contains 86 references.) (KB)

Developmental/adapted Physical Education Michael A. Horvat, 2003 The new edition of *Developmental/Adapted Physical Education: Making Ability Count* takes a developmental approach to special education and physical education, and focuses on the physical functioning and motor functioning that is relevant to both physical education and adapted physical education instructors. The book incorporates the extensive changes in methodology, teaching techniques, and legal requirements for instructors of individuals with disabilities that have occurred over the past 15 years. Drawing on the extensive teaching and coaching experience of all four authors, the book encourages teachers to emphasize what students with disabilities can accomplish, and stresses the importance of a collaborative team approach to meet the needs of individuals with disabilities. Coverage of assessment techniques includes performing valid and reliable assessment, selecting appropriate programming, making proper placement, and using various teaching methods and evaluation procedures. For anyone interested in adapted physical education.

The Effects of a Physical Education Program on Auditory Discrimination Ability, Verbal and Non-verbal, of Kindergarten Children Mildred May Bailey Evans, 1971

Advances in Child Development and Behavior Robert V. Kail, 2002-10-24 *Advances in Child Development and Behavior* is intended to ease the task faced by researchers, instructors, and students who are confronted by the vast amount of research and theoretical discussion in child development and behavior. The serial provides scholarly technical articles with critical reviews, recent advances in research, and fresh theoretical viewpoints. Volume 30 discusses early recall memory, balance and motor learning, sexual selection, emotion-related regulation, maternal sensitivity and attachment, and influences of friends.
