

Brilliant The Evolution Of Artificial Light

Philip Ball

Brilliant Jane Brox, 2010-06-29 This “superb history” of artificial light traces the evolution of society—“invariably fascinating and often original . . . [it] amply lives up to its title” (Publishers Weekly, starred review). In *Brilliant*, Jane Brox explores humankind’s ever-changing relationship to artificial light, from the stone lamps of the Pleistocene to the LEDs embedded in fabrics of the future. More than a survey of technological development, this sweeping history reveals how artificial light changed our world, and how those social and cultural changes in turn led to the pursuit of more ways of spreading, maintaining, and controlling light. Brox plumbs the class implications of light—who had it, who didn’t—through the centuries when crude lamps and tallow candles constricted waking hours. She identifies the pursuit of whale oil as the first time the need for light thrust us toward an environmental tipping point. Only decades later, gas street lights opened up the evening hours to leisure, which changed the ways we live and sleep and the world’s ecosystems. Edison’s bulbs produced a light that seemed to its users all but divorced from human effort or cost. And yet, as Brox’s informative portrait of our current grid system shows, the cost is ever with us. *Brilliant* is infused with human voices, startling insights, and timely questions about how our future lives will be shaped by light

Brilliant Jane Brox, 2012 Tracing the fascinating history of human light, from stone lamps to the lightbulb, the story of light is also the story of

evolving humanity. The class, social and environmental implications of providing light has shaped historical eras: crude lamps and tallow candles constricted waking hours and drove the crazed hunting of whales for their oil towards environmental disaster. Gaslight helped to create leisure hours in the evening and allowed the emergence of vibrant street life in cities while incandescent light changed the ways we live and sleep. Jane Brox asks the reader to consider the cost of the current grid system for providing light.

Five Thousand Days Like This One Jane Brox, 2000-04-07 Amid the turmoil after her father's death-decisions to be made, the future of the family farm to be settled-Jane Brox, using her acclaimed compassion, honesty, and restraint (The Boston Globe), begins a search for her family's story. The search soon leads her to the quintessentially American history of New England's Merrimack Valley, its farmers, and the immigrant workers caught up in the industrial textile age. Jane Brox's first book, *Here and Nowhere Else*, won the 1996 L. L. Winship/PEN New England Award. Her work has appeared in numerous journals and magazines, and has been represented in *Best American Essays*. She is a frequent contributor to *The Georgia Review*. Jane Brox lives in the Merrimack Valley of Massachusetts.

Silence Jane Brox, 2019 Offers a history of silence as a powerful shaper of the human mind, specifically in Eastern State Penitentiary and the monastic world of Medieval Europe.

The Artificial Ape Timothy Taylor, 2010-07-20 A breakthrough theory that

tools and technology are the real drivers of human evolution. Although humans are one of the great apes, along with chimpanzees, gorillas, and orangutans, we are remarkably different from them. Unlike our cousins who subsist on raw food, spend their days and nights outdoors, and wear a thick coat of hair, humans are entirely dependent on artificial things, such as clothing, shelter, and the use of tools, and would die in nature without them. Yet, despite our status as the weakest ape, we are the masters of this planet. Given these inherent deficits, how did humans come out on top? In this fascinating new account of our origins, leading archaeologist Timothy Taylor proposes a new way of thinking about human evolution through our relationship with objects. Drawing on the latest fossil evidence, Taylor argues that at each step of our species' development, humans made choices that caused us to assume greater control of our evolution. Our appropriation of objects allowed us to walk upright, lose our body hair, and grow significantly larger brains. As we push the frontiers of scientific technology, creating prosthetics, intelligent implants, and artificially modified genes, we continue a process that started in the prehistoric past, when we first began to extend our powers through objects. Weaving together lively discussions of major discoveries of human skeletons and artifacts with a reexamination of Darwin's theory of evolution, Taylor takes us on an exciting and challenging journey that begins to answer the fundamental question about our existence: what makes humans unique, and what does that mean for our future?

Clearing Land Jane Brox, 2005-09-14 Though few of us now live close to the soil, the world we inhabit has been sculpted by our long national saga of settlement. At the heart of our identity lies the notion of the family farm, as shaped by European history and reshaped by the vast opportunities of the continent. It lies at the heart of Jane Brox's personal story, too: she is the daughter of immigrant New England farmers whose way of life she memorialized in her first two books but has not carried on. In this clear-eyed, lyrical account, Brox twines the two narratives, personal and historical, to explore the place of the family farm as it has evolved from the pilgrims' brutal progress at Plymouth to the modern world, where much of our food is produced by industrial agriculture while the small farm is both marginalized and romanticized. In considering the place of the farm, Brox also considers the rise of textile cities in America, which encroached not only upon farms and farmers but upon the sense of commonality that once sustained them; and she traces the transformation of the idea of wilderness--and its intricate connection to cultivation--which changed as our ties to the land loosened, as terror of the wild was replaced by desire for it. Exploring these strands with neither judgment nor sentimentality, Brox arrives at something beyond a biography of the farm: a vivid depiction of the half-life it carries on in our collective imagination.

Empires of Light Jill Jonnes, 2004-10-12 The gripping history of electricity and how the fateful collision of Thomas Edison, Nikola Tesla, and George

Westinghouse left the world utterly transformed. In the final decades of the nineteenth century, three brilliant and visionary titans of America's Gilded Age—Thomas Edison, Nikola Tesla, and George Westinghouse—battled bitterly as each vied to create a vast and powerful electrical empire. In *Empires of Light*, historian Jill Jonnes portrays this extraordinary trio and their riveting and ruthless world of cutting-edge science, invention, intrigue, money, death, and hard-eyed Wall Street millionaires. At the heart of the story are Thomas Alva Edison, the nation's most famous and folksy inventor, creator of the incandescent light bulb and mastermind of the world's first direct current electrical light networks; the Serbian wizard of invention Nikola Tesla, elegant, highly eccentric, a dreamer who revolutionized the generation and delivery of electricity; and the charismatic George Westinghouse, Pittsburgh inventor and tough corporate entrepreneur, an industrial idealist who in the era of gaslight imagined a world powered by cheap and plentiful electricity and worked heart and soul to create it. Edison struggled to introduce his radical new direct current (DC) technology into the hurly-burly of New York City as Tesla and Westinghouse challenged his dominance with their alternating current (AC), thus setting the stage for one of the eeriest feuds in American corporate history, the War of the Electric Currents. The battlegrounds: Wall Street, the 1893 Chicago World's Fair, Niagara Falls, and, finally, the death chamber—Jonnes takes us on the tense walk down a prison hallway and into the sunlit room where William

Kemmler, convicted ax murderer, became the first man to die in the electric chair.

Bright Earth Philip Ball, 2003-04-15 From Egyptian wall paintings to the Venetian Renaissance, impressionism to digital images, Philip Ball tells the fascinating story of how art, chemistry, and technology have interacted throughout the ages to render the gorgeous hues we admire on our walls and in our museums. Finalist for the 2002 National Book Critics Circle Award.

Illuminated Paris Hollis Clayson, 2019-05-16 The City of Light. For many, these four words instantly conjure late nineteenth-century Paris and the garish colors of Toulouse-Lautrec's iconic posters. More recently, the Eiffel Tower's nightly show of sparkling electric lights has come to exemplify our fantasies of Parisian nightlife. Though we reflect longingly on such scenes, in *Illuminated Paris*, Hollis Clayson shows that there's more to these clichés than meets the eye. In this richly illustrated book, she traces the dramatic evolution of lighting in Paris and how artists responded to the shifting visual and cultural scenes that resulted from these technologies. While older gas lighting produced a haze of orange, new electric lighting was hardly an improvement: the glare of experimental arc lights—themselves dangerous—left figures looking pale and ghoulish. As Clayson shows, artists' representations of these new colors and shapes reveal turn-of-the-century concerns about modernization as electric lighting came to represent the harsh glare of rapidly accelerating social change. At the same time, in part thanks to

American artists visiting the city, these works of art also produced our enduring romantic view of Parisian glamour and its Belle Époque.

Our Final Invention James Barrat, 2013-10-01 Elon Musk named Our Final Invention one of 5 books everyone should read about the future A Huffington Post Definitive Tech Book of 2013 Artificial Intelligence helps choose what books you buy, what movies you see, and even who you date. It puts the smart in your smartphone and soon it will drive your car. It makes most of the trades on Wall Street, and controls vital energy, water, and transportation infrastructure. But Artificial Intelligence can also threaten our existence. In as little as a decade, AI could match and then surpass human intelligence. Corporations and government agencies are pouring billions into achieving AI's Holy Grail—human-level intelligence. Once AI has attained it, scientists argue, it will have survival drives much like our own. We may be forced to compete with a rival more cunning, more powerful, and more alien than we can imagine. Through profiles of tech visionaries, industry watchdogs, and groundbreaking AI systems, Our Final Invention explores the perils of the heedless pursuit of advanced AI. Until now, human intelligence has had no rival. Can we coexist with beings whose intelligence dwarfs our own? And will they allow us to?

The Beginning of Infinity David Deutsch, 2011-03-31 'Science has never had an advocate quite like David Deutsch ... A computational physicist on a par with his touchstones Alan Turing and Richard Feynman, and a philosopher in the line of his greatest hero, Karl Popper. His arguments are so clear that to read him is to experience the thrill of the highest level of discourse available on this planet and to understand it' Peter Forbes, Independent In our search for truth, how far have we advanced? This uniquely human quest for good explanations has driven amazing improvements in everything from scientific understanding and technology to politics, moral values and human welfare. But will progress end, either in catastrophe or completion - or will it continue infinitely? In this profound and seminal book, David Deutsch explores the furthest reaches of our current understanding, taking in the Infinity Hotel, supernovae and the nature of optimism, to instill in all of us a wonder at what we have achieved - and the fact that this is only the beginning of humanity's infinite possibility. 'This is Deutsch at his most ambitious, seeking to understand the implications of our scientific

explanations of the world ... I enthusiastically recommend this rich, wide-ranging and elegantly written exposition of the unique insights of one of our most original intellectuals' Michael Berry, Times Higher Education Supplement 'Bold ... profound ... provocative and persuasive' Economist 'David Deutsch may well go down in history as one of the great scientists of our age' Scotsman

Brilliant Blunders Mario Livio, 2014-05-27 Drawing on the lives of five great scientists -- Charles Darwin, William Thomson (Lord Kelvin), Linus Pauling, Fred Hoyle and Albert Einstein -- scientist/author Mario Livio shows how even the greatest scientists made major mistakes and how science built on these errors to achieve breakthroughs, especially into the evolution of life and the universe--

Here and Nowhere Else Jane Brox, 2004-09-15 In her first book, which won the L. L. Winship/PEN New England Award, Jane Brox writes of going back to the farm where she grew up, to help her aging father and the troubled brother who works the land with him. She memorably captures the cadences of farm life and the people who sustain it, at a time when both are waning.

Children of the Sun Alfred W. Crosby, 2006-01-01 A spirited survey of humanity's historical and modern efforts to harness sun-based energy reveals how the human race's successes have hinged directly on effective uses of sun energy, cites rates in pollution and global warming as warning signs of fossil fuel limits, and makes optimistic predictions about future

innovations. 13,000 first printing.

Immortal Coil Jeffrey Lang,2002-03-21 He is perhaps the ultimate human achievement: a sentient artificial life-form -- self-aware, self-determining, possessing a mind and body far surpassing that of his makers, and imbued with the potential to evolve beyond the scope of his programming. Created by one of the most brilliant and eccentric intellects the Federation has ever known, the android Data has always believed he was unique, the one true fulfillment of a dream to create children of the mind. But is he? Investigating the mysterious destruction of a new android created by Starfleet, Data and the crew of the U.S.S. Enterprise™ uncover startling secrets stretching back to the galaxy's dim past. That knowledge is coveted by beings who will stop at nothing to control it, and will force Data to redefine himself as he learns the hidden history of artificial intelligence.

Smoking Cigarettes, Eating Glass Annita Perez Sawyer,2015-06-01 A fiercely honest and beautifully written book. –Paul Austin, author, Beautiful Eyes and Something for the PainA cautionary tale of careless psychiatric diagnosis, treatment, and resilienceSawyer's memoir is a harrowing, heroic, and redeeming story of her battle with mental illness, and her triumph in overcoming it. In 1960, as a suicidal teenager, Sawyer was institutionalized, misdiagnosed, and suffered through 89 electroshock treatments before being transferred, labeled as unimproved. The damage done has haunted her life. Discharged in 1966, after finally receiving proper psychiatric care, Sawyer

kept her past secret and moved on to graduate from Yale University, raise two children, and become a respected psychotherapist. That is, until 2001, when she reviewed her hospital records and began to remember a broken childhood and the even more broken mental health system of the 1950s and 1960s.

Extra Life Steven Johnson, 2021-05-11 “Offers a useful reminder of the role of modern science in fundamentally transforming all of our lives.” –President Barack Obama (on Twitter) “An important book.” –Steven Pinker, The New York Times Book Review The surprising and important story of how humans gained what amounts to an extra life, from the bestselling author of *How We Got to Now* and *Where Good Ideas Come From* In 1920, at the end of the last major pandemic, global life expectancy was just over forty years. Today, in many parts of the world, human beings can expect to live more than eighty years. As a species we have doubled our life expectancy in just one century. There are few measures of human progress more astonishing than this increased longevity. *Extra Life* is Steven Johnson’s attempt to understand where that progress came from, telling the epic story of one of humanity’s greatest achievements. How many of those extra years came from vaccines, or the decrease in famines, or seatbelts? What are the forces that now keep us alive longer? Behind each breakthrough lies an inspiring story of cooperative innovation, of brilliant thinkers bolstered by strong systems of public support and collaborative networks, and of dedicated activists fighting for meaningful reform. But for all its focus on positive change, this book is

also a reminder that meaningful gaps in life expectancy still exist, and that new threats loom on the horizon, as the COVID-19 pandemic has made clear. How do we avoid decreases in life expectancy as our public health systems face unprecedented challenges? What current technologies or interventions that could reduce the impact of future crises are we somehow ignoring? A study in how meaningful change happens in society, Extra Life celebrates the enduring power of common goals and public resources, and the heroes of public health and medicine too often ignored in popular accounts of our history. This is the sweeping story of a revolution with immense public and personal consequences: the doubling of the human life span.

Birth of Intelligence Daeyeol Lee, 2020 What is intelligence? How did it begin and evolve to human intelligence? Does a high level of biological intelligence require a complex brain? Can man-made machines be truly intelligent? Is AI fundamentally different from human intelligence? In Birth of Intelligence, distinguished neuroscientist Daeyeol Lee tackles these pressing fundamental issues. To better prepare for future society and its technology, including how the use of AI will impact our lives, it is essential to understand the biological root and limits of human intelligence. After systematically reviewing biological and computational underpinnings of decision making and intelligent behaviors, Birth of Intelligence proposes that true intelligence requires life.

If Walls Could Talk Lucy Worsley, 2012-02-28 From the Joint Chief Curator at

Historic Royal Palaces and BBC Television series including Lucy Worsley: Mozart's London Odyssey and Six Wives with Lucy Worsley, available on Netflix. "Worsley is a thoughtful, charming, often hilarious guide to life as it was lived, from the mundane to the esoteric." -The Boston Globe Why did the flushing toilet take two centuries to catch on? Why did medieval people sleep sitting up? When were the two "dirty centuries"? Why, for centuries, did rich people fear fruit? In her brilliantly and creatively researched book, Lucy Worsley takes us through the bedroom, bathroom, living room, and kitchen, covering the history of each room and exploring what people actually did in bed, in the bath, at the table, and at the stove-from sauce stirring to breast-feeding, teeth cleaning to masturbating, getting dressed to getting married-providing a compelling account of how the four rooms of the home have evolved from medieval times to today, charting revolutionary changes in society.
