Japanese Business Operations in an Uncertain World Anshuman Khare, Nobutaka Odake, Hiroki Ishikura, 2021-12-19 This book looks at Japanese companies in manufacturing and services sectors and how they are trying to emerge from the prolonged uncertainty of the pandemic. The chapters are written by those dealing with Japanese business under the shadow of the pandemic and being influenced by the continuous and rapid adoption of digital technologies in business and our daily lives. This book brings together the experiences of big and small corporations while looking at how digital transformation and the pandemic combined have led to a transformation in the product, production processes and services. It highlights the role played by robots, 3-D printing and renewable energy in manufacturing while the impact can be seen in the changes coming to future offices, how we work and interact and how we relax through tourism and travel on the service side. The services sector is as much impacted by digital transformation and the pandemic as any other field in business. Aimed at academics, researchers and practitioners, *Japanese Business Operations in an Uncertain World* will provide valuable insights into how Japanese organizations are adapting to the dual impact of the pandemic and advancements in digital technologies.

Cloud Data Centers and Cost Modeling Caesar Wu,Rajkumar Buyya,2015-02-27 Cloud Data Centers and Cost Modeling establishes a framework for strategic decision-makers to facilitate the development of cloud data centers. Just as building a house requires a clear understanding of the blueprints, architecture, and costs of the project; building a cloud-based data center requires similar knowledge. The authors take a theoretical and practical approach, starting with the key questions to help uncover needs and clarify project scope. They then demonstrate probability tools to test and support decisions, and provide processes that resolve key issues. After laying a foundation of cloud concepts and definitions, the book addresses data center creation, infrastructure

development, cost modeling, and simulations in decision-making, each part building on the previous. In this way the authors bridge technology, management, and infrastructure as a service, in one complete guide to data centers that facilitates educated decision making. Explains how to balance cloud computing functionality with data center efficiency Covers key requirements for power management, cooling, server planning, virtualization, and storage management Describes advanced methods for modeling cloud computing cost including Real Option Theory and Monte Carlo Simulations Blends theoretical and practical discussions with insights for developers, consultants, and analysts considering data center development

Twitterville Shel Israel, 2009-09-03 Twitter is the most rapidly adopted communication tool in history, going from zero to ten million users in just over two years. On Twitter, word can spread faster than wildfire. Companies no longer have the option of ignoring the conversation. Unlike other hot social media spaces, Twitterville is dominated by professionals, not students. And despite its size, it still feels like a small town. Twitter allows people to interact much the way they do face-to-face, honestly and authentically. One minute, you're complaining about the weather with local friends, the next, you're talking shop with a colleague based halfway across the globe. No matter where you're from or what you do for a living, you will find conversations on Twitter that are valuable. Despite the millions of people joining the site, you'll quickly find the ones who can make a difference to you. Social media writer Shel Israel shares revealing stories of Twitterville residents, from CEOs to the student who became the first to report the devastation of the Szechuan earthquake; from visionaries trying to raise money for a cause to citizen

journalists who outshine traditional media companies. Israel introduces you to trailblazers such as: · Frank Eliason, who used Twitter to reverse Comcast's blemished customer service reputation · Bill Fergus, who was on the team at Henry Ford Medical Center during the first "live tweeted" surgery · Scott Monty, social media officer for Ford, who held off a mob of misinformed Ranger fans and averted a PR crisis · Connie Reece, who used Twitter to raise tens of thousands of dollars for cancer patients in need · The Coffee Groundz, a Houston-area coffee shop that uses Twitter to pack the tables (and fight off Starbucks) Twitterville features many true stories as dramatic as these. But it also recounts those of ordinary businesspeople who use Twitter to get closer to their customers. And it explains how global neighborhoods will make geography increasingly irrelevant. It even explains why people sometimes really do care what you had for lunch.
