Médias, pouvoirs et identités PATRAQUIM Luis

Carlos, 2005-09-01 Partout, les médias sont un enjeu de pouvoir, et c'est par le biais de ces enjeux que s'expriment les identités ethniques ou politiques, les trajectoires professionnelles des journalistes, les techniques de reportage, les traditions cinématographiques émergentes etc.. Introduit par un beau texte de l'écrivain mozambicain Luis Carlos Patraquin, ce dossier ne prétend pas à l'exhaustivité. Mais en une dizaine d'articles d'auteurs de nationalités brésilienne, britannique, française, mozambicaine et portugaise, il offre une clé supplémentaire d'approche du puzzle lusophone.

**Médias, pouvoir et identités** , A l'aire de la mondialisation, le fait linguistique est marchandisé de manière croissante. Ainsi, le marché des feuilletons brésiliens (telenovelas) s'est brusquement élargi et tend à devenir un phénomène lusophone majeur. Si personne ne nie l'influence croissante que le géant brésilien acquiert dans l'aire dessinée par la pratique du portugais - la quatrième langue européenne la plus parlée dans le monde -, le phénomène produit-il une uniformisation tendancielle des pays de langue portugaise ? L'analyse des médias dévoile certes des phénomènes de rapprochement provoqués par la communauté de langue, mais renforce aussi l'impression que chaque pays reste surtout influencé par son aire d'insertion propre. La lusophonie demeure une aire spécifique d'intersection avec d'autres identités, et n'est pas, en tant que telle, une aire culturelle.

Partout, les médias sont un enjeu de pouvoir, et c'est par le biais de ces enjeux que s'expriment les identités ethniques ou politiques, les trajectoires professionnelles des journalistes, les techniques de reportage, les traditions cinématographiques émergentes, etc. Bien entendu, la vitalité des médias sera plus forte là où le mouvement social a imposé une réelle pluralité politique : c'est, en négatif, pourquoi l'Angola n'est pas directement présent dans ce dossier, même si certaines initiatives (le plus souvent restreintes à la capitale) sont prometteuses. En revanche, les vitalités portugaise, brésilienne, capverdienne et même mozambicaine, apparaissent pleinement, qu'il s'agisse de la télévision, de générations journalistiques, du développement d'internet notamment au Cap-Vert, l'archipel de tous les réseaux. Introduit par un beau texte de l'écrivain mozambicain Luis Carlos Patraquim, ce dossier ne prétend pas à l'exhaustivité. Mais, en une dizaine d'articles d'auteurs de nationalités brésilienne, britannique, française, mozambicaine et portugaise, il offre une clé supplémentaire d'approche du puzzle lusophone.

*Grapevine Viruses: Molecular Biology, Diagnostics and Management* Baozhong Meng, Giovanni P. Martelli, Deborah A. Golino, Marc Fuchs, 2017-07-05 The domestication of grapes dates back five thousand years ago and has spread to nearly all continents. In recent years, grape acreage has increased dramatically in new regions, including the United States of America, Chile, Asia (China and India), and Turkey. A major limiting factor to the sustained production of

premium grapes and wines is infections by viruses. The advent of powerful molecular and metagenomics technologies, such as molecular cloning and next generation sequencing, allowed the discovery of new viruses from grapes. To date, grapevine is susceptible to 64 viruses that belong to highly diverse taxonomic groups. The most damaging diseases include: (1) infectious degeneration; (2) leafroll disease complex; and (3) rugose wood complex. Recently, two new disease syndromes have been recognized: Syrah decline and red blotch. Losses due to fanleaf degeneration are estimated at \$1 billion annually in France alone. Other diseases including leafroll, rugose wood, Syrah decline and red blotch can result in total crop loss several years post-infection. This situation is further exacerbated by mixed infections with multiple viruses and other biotic as well as adverse abiotic environmental conditions, such as drought and winter damage, causing even greater destruction. The book builds upon the last handbook (written over twenty years ago) on the part of diagnostics and extensively expands its scope by inclusion of molecular biology aspects of select viruses that are widespread and economically most important. This includes most current information on the biology, transmission, genome replication, transcription, subcellular localization, as well as virus-host interactions. It also touches on several novel areas of scientific inquiry. It also contains suggested directions for future research in the field of grapevine virology.
