lengthening shadows, changing tides, growing plants, and habits of wildlife. A decade after publication, this modern classic still reminds us that we can find south by joining the horns of the crescent moon—and find adventure in our own backyards.

How to Read Nature: Awaken Your Senses to the Outdoors You've Never Noticed (Natural Navigation) Tristan Gooley, 2017-10-03 Hone your senses and learn to read the hidden signs of nature—from master outdoorsman Tristan Gooley, New York Times–bestselling author of *How to Read a Tree* and *The Lost Art of Reading Nature’s Signs* “Equal parts alfresco inspiration, interesting factoids, how-to instructions and self-help

advice.”—The Wall Street Journal When most of us go for a walk, a single sense—sight—tends to dominate our experience. But when New York Times–bestselling author and expert navigator Tristan Gooley goes for a walk, he uses all five senses to “read” everything nature has to offer. A single lowly weed can serve as his compass, calendar, clock, and even pharmacist. In *How to Read Nature*, Gooley introduces readers to his world—where the sky, sea, and land teem with marvels. Plus, he shares 15 exercises to sharpen all of your senses. Soon you’ll be making your own discoveries, every time you step outside!

The Secret World of Weather: How to Read Signs in Every Cloud, Breeze, Hill, Street, Plant, Animal, and Dewdrop (Natural Navigation) Tristan Gooley, 2023-02-28 Learn to “see” the forecast in the hidden weather signs all around you—from the New York Times–bestselling author of *How to Read a Tree* and *The Lost Art of Reading Nature’s Signs* In *The Secret World of Weather*, bestselling author Tristan Gooley turns his gaze up to the sky, bringing his signature brand of close observation and eye-opening deduction to the fascinating world of weather. Every cloud, every change in temperature, every raindrop, every sunbeam, every breeze reveals something about our weather—if you know what to look for. Before you know it, you’ll be able to forecast impending storms, sunny days, and everything in between, all without needing to consult your smartphone. But *The Secret World of Weather* goes far beyond mere weather prediction, changing the very way we think about weather itself. Weather is not something that blankets an area; rather, it changes constantly as you walk through woods or turn down a street. The weather is never identical on two sides of a tree—or even beneath it. Take, for example, Gooley’s

remarkable discovery that breezes accelerate beneath a tree. To Gooley, this is “weather,” a tiny microclimate that explains why people sit beneath a tree to cool down—not only for the shade but, subconsciously, for cooler breeze. And so Gooley shows us not only what the weather will be like five days from now, but also what to expect about the weather around every corner. By carefully observing the subtle interplay of wind, cloud, fog, temperature, rain and many other phenomena, we not only form a deeper understanding of weather patterns, but also unlock secrets about our environment. Weather forms our landscape, and landscape forms our weather. Everything we see in the sky reflects where we are. When we learn to read weather’s signs, Gooley shows us, the weather becomes our map, revealing to us how it has made our towns, cities, woods, and hills what they are. You’ll never see your surroundings the same way again.

The Lost Art of Finding Our Way John Edward Huth, 2013-05-15 Explains a process of navigation that relies on natural phenomenon and describes techniques followed by ancient people involving the Sun, Moon, tides, currents, wind, and the horizon that can be used to determine direction and ensure arrival at a safe destination.

The Natural Explorer Tristan Gooley, 2013 A new era of exploration is dawning ... The most rewarding travel experiences do not depend on our destination or the length of our journey, but on our levels of awareness. A short walk can compare with an epic journey, when we take the time to focus on the things that dramatically enrich each journey. Combining the work of some of the most insightful travelers of the past two thousand years with his own experience, Tristan Gooley, author of *THE NATURAL NAVIGATOR*

demonstrates how it is possible to connect profoundly with the lands we travel through. Exploration is no longer about hardship or long distances, it is about celebrating the sense of connection and discovery that is possible in all our travels.

Wild Signs and Star Paths 'a Beautifully Written Almanac of Tricks and Tips That We've Lost Alon Tristan Gooley,2018-05-17 Tristan Gooley ... shows how it is possible to achieve a level of outdoors awareness that will enable you to sense direction from stars and plants, forecast weather from woodland sounds and predict the next action of an animal from its body language - instantly. Although once common, this now rare awareness would be labelled by many as a 'sixth sense'. We have become so distanced from this way of experiencing our environment that it may initially seem hard to believe that it is possible, but Tristan Gooley uses a collection of 'keys' to show how everyone can develop this ability and enjoy the outdoors in an exciting way - one that is both new and ancient.

From Here to There Michael Bond,2020-05-12 A wise and insightful exploration of human navigation, what it means to be lost, and how we find our way. How is it that we can walk unfamiliar streets while maintaining a sense of direction? Come up with shortcuts on the fly, in places we've never traveled? The answer is the complex mental map in our brains. This feature of our cognition is easily taken for granted, but it's also critical to our species' evolutionary success. In From Here to There Michael Bond tells stories of the lost and found—Polynesian sailors, orienteering champions, early aviators—and surveys the science of human navigation. Navigation skills are deeply embedded in our biology. The ability to find our way over large distances in prehistoric times gave Homo sapiens an advantage, allowing us to explore the farthest regions of the planet. Wayfinding also

shaped vital cognitive functions outside the realm of navigation, including abstract thinking, imagination, and memory. Bond brings a reporter's curiosity and nose for narrative to the latest research from psychologists, neuroscientists, animal behaviorists, and anthropologists. He also turns to the people who design and expertly maneuver the world we navigate: search-and-rescue volunteers, cartographers, ordnance mappers, urban planners, and more. The result is a global expedition that furthers our understanding of human orienting in the natural and built environments. A beguiling mix of storytelling and science, *From Here to There* covers the full spectrum of human navigation and spatial understanding. In an age of GPS and Google Maps, Bond urges us to exercise our evolved navigation skills and reap the surprising cognitive rewards.

Ten Billion Stephen Emmott, 2013-09-10 Deforestation. Desertification. Species extinction. Global warming. Growing threats to food and water. The driving issues of our times are the result of one huge problem: Us. As the population continues to grow, our problems will increase. And this means that every way we look at it, a planet of ten billion people is likely to be a nightmare. Stephen Emmott, a scientist whose lab is at the forefront of research into complex natural systems, sounds the alarm. *TEN BILLION* is a snapshot of our planet, and our species, approaching a crisis, and a stark analysis of where this leaves us. *TEN BILLION* is not another climate book. *TEN BILLION* is a book about us.

Dark and Magical Places: The Neuroscience of Navigation Christopher Kemp, 2022-01-25 How the brain helps us to understand and navigate space—and why, sometimes, it doesn't work the way it should. Inside our heads we carry around an infinite and endlessly unfolding map of the world. Navigation is one of the most ancient neural abilities we have—older than language. In *Dark and Magical Places*, Christopher Kemp embarks on a journey to discover the remarkable extent of what our minds can do. Fueled by his own spatial shortcomings, Kemp describes the brain regions that orient us in space and the specialized neurons that do it. Place cells. Grid cells. He examines how the brain plans routes, recognizes landmarks, and makes sure we leave a room through a door instead of trying to leave through a painting. From the secrets of supernavigators like the indigenous hunters of the Bolivian rainforest to the confusing environments inhabited by people with place blindness, Kemp charts the myriad ways in which we find our way and explains the cutting-edge neuroscience behind them. How did Neanderthals navigate? Why do even seasoned hikers stray from the trail? What spatial skills do we inherit from our parents? How can smartphones and our reliance on GPS devices impact our brains? In

engaging, engrossing language, Kemp unravels the mysteries of navigating and links the brain's complex functions to the effects that diseases like Alzheimer's, types of amnesia, and traumatic brain injuries have on our perception of the world around us. A book for anyone who has ever felt compelled to venture off the beaten path, *Dark and Magical Places* is a stirring reminder of the beauty in losing yourself to your surroundings. And the beauty in understanding how our brains can guide us home.

The Book of Barely Imagined Beings Caspar Henderson, 2013-04-10 From medieval bestiaries to Borges's *Book of Imaginary Beings*, we've long been enchanted by extraordinary animals, be they terrifying three-headed dogs or asps impervious to a snake charmer's song. But bestiaries are more than just zany zoology—they are artful attempts to convey broader beliefs about human beings and the natural order. Today, we no longer fear sea monsters or banshees. But from the infamous honey badger to the giant squid, animals continue to captivate us with the things they can do and the things they cannot, what we know about them and what we don't. With *The Book of Barely Imagined Beings*, Caspar Henderson offers readers a fascinating, beautifully produced modern-day menagerie. But whereas medieval bestiaries were often based on folklore and myth, the creatures that abound in Henderson's book—from the axolotl to the zebrafish—are, with one exception, very much with us, albeit sometimes in depleted numbers. *The Book of Barely Imagined Beings* transports readers to a world of real creatures that seem as if they should be made up—that are somehow more astonishing than anything we might have imagined. The yeti crab, for example, uses its furry claws to farm the bacteria on which it feeds. The waterbear, meanwhile, is among nature's "extreme survivors," able to withstand a week

unprotected in outer space. These and other strange and surprising species invite readers to reflect on what we value—or fail to value—and what we might change. A powerful combination of wit, cutting-edge natural history, and philosophical meditation, *The Book of Barely Imagined Beings* is an infectious and inspiring celebration of the sheer ingenuity and variety of life in a time of crisis and change.
