War Photographs Taken on the Battlefields of the Civil War Mathew B.

Brady,Alexander Gardner,2013-06-01 Fought over the course of four years, the Civil War pitted countrymen against countrymen, North versus South, friend against friend, and brother against brother. The photographs within these pages document the war that united America as one. These rare shots were taken in the middle of the battlefield during the earliest days of photography. Selected from a collection of seven thousand original negatives, these historic photos capture nearly every aspect of Civil War life. Among these photos are images of camps sprawling across acres, soldiers at their battlements, firing of heavy artillery, the aftermath of battle, and the terror that these young men faced. See first-hand of Union and Confederate officers strategizing their next moves, and Abraham Lincoln addressing his Union commanders. Originally released from the private collection of Edward Bailey Eaton in 1907, this edition is a must have for any Civil War buff or historian. No collection can be considered complete without these photographs by Matthew Brady and Alexander Gardner, as well as the meticulous passages that put the images in illuminating context.

Development Models, Globalization and Economies John B. Kidd, Frank-Jürgen Richter, 2005-01-31 This text considers different economic models available in the global

market. The US or Anglo-Saxon model is often portrayed as the best but now Asia is again on a roll. The book analyzes how these models have influenced both regional and global development, and engages in discussions upon alternatives and the search for the 'grail'.

Accident At Three Mile Island David L. Sills, 2019-03-01 The nuclear accident at Three Mile Island in March 1979 was as much a social-systems failure as it was an engineering failure. It raised questions not only about the regulation and management of nuclear-power plants but also about the effects of nuclear accidents on the community, on society, and on the total controversy surrounding nuclear energy. Questions were also raised about public perceptions of the risks of high technology. At the request of the President's Commission on the Accident at Three Mile Island (the Kemeny Commission), the Social Science Research Council commissioned social scientists to write a series of papers on the human dimensions of the event. This volume includes those papers, in revised and expanded form, and a comprehensive bibliography of published and unpublished social science research on the accident and its aftermath.

Innovations, Technologies and Research in Education Linda Daniela, 2018-06-11 The book includes studies presented at the ATEE Spring Conference 2017 on emerging trends in the use of technology in educational processes, the use of robotics to facilitate the construction of knowledge, how to facilitate learning motivation, transformative learning, and innovative educational solutions. Chapters here are devoted to studies on the didactic aspects of technology usage, how to facilitate learning, and the social aspects affecting acquisition of education, among others. This volume serves as a basis for further discussions on the development of educational science, on topical research fields and

practical challenges. It will be useful to scientists in the educational field who wish to get acquainted with the results of studies conducted in countries around the world on emerging educational issues. Moreover, teachers who need to implement into practice the newest scientific findings and opinions and future teachers who need to acquire new knowledge will also find this book useful.

The Next Catastrophe Charles Perrow, 2011-02-07 Charles Perrow is famous worldwide for his ideas about normal accidents, the notion that multiple and unexpected failures--catastrophes waiting to happen--are built into our society's complex systems. In *The Next Catastrophe*, he offers crucial insights into how to make us safer, proposing a bold new way of thinking about disaster preparedness. Perrow argues that rather than laying exclusive emphasis on protecting targets, we should reduce their size to minimize damage and diminish their attractiveness to terrorists. He focuses on three causes of disaster--natural, organizational, and deliberate--and shows that our best hope lies in the deconcentration of high-risk populations, corporate power, and critical infrastructures such as electric energy, computer systems, and the chemical and food industries. Perrow reveals how the threat of catastrophe is on the rise, whether from terrorism, natural disasters, or industrial accidents. Along the way, he gives us the first comprehensive history of FEMA and the Department of Homeland Security and examines why these agencies are so ill equipped to protect us. *The Next Catastrophe* is a penetrating

reassessment of the very real dangers we face today and what we must do to confront them. Written in a highly accessible style by a renowned systems-behavior expert, this book is essential reading for the twenty-first century. The events of September 11 and Hurricane Katrina--and the devastating human toll they wrought--were only the beginning. When the next big disaster comes, will we be ready? In a new preface to the paperback edition, Perrow examines the recent (and ongoing) catastrophes of the financial crisis, the BP oil spill, and global warming.

The Myths of Security John Viega, 2009-06-19 If you think computer security has improved in recent years, *Myths of Security* will shake you out of your complacency. Longtime security professional John Viega reports on the sorry state of security, with concrete suggestions for professionals and individuals confronting the issue. Provocative, insightful, and often controversial, *The Myths of Security* addresses IT professionals who deal with security issues, and speaks to Mac and PC users who spend time online.

The Resilient Sector Lester M. Salamon, 2003-08-29 The Resilient Sector makes available in an updated form the concise overview of the state of health of America's nonprofit organizations that Johns Hopkins scholar Lester Salamon recently completed as part of the state of nonprofit America project he undertook in cooperation with the Aspen Institute. Contrary to popular understanding, Salamon argues, America's nonprofit organizations have shown remarkable resilience in recent years in the face of a variety of difficult challenges, significantly re-engineering themselves in the process. But this very resilience now poses risks for the sector's continued ability to perform the tasks that we have long expected of it. The Resilient Sector offers nonprofit practitioners, policymakers, the press, and the public at large a lively assessment of this set of institutions that we have long taken for granted, but that the Frenchman Alexis de-Toqueville recognized to be more deserving of our attention than almost any other part of the American experiment.
