Reflecting the work of a truly international panel of experts from Europe, North America and Asia, the International Handbook on Psychopathic Disorders and the Law offers an in-depth, multidisciplinary look at key aspects of the development and etiology of psychopathic disorders, current methods of intervention, treatment and management, and how these disorders impact decision-making in civil and criminal law.

Palgrave Advances in Peacebuilding O. Richmond, 2010-01-20 The quality of the peace arrived at via liberal peacebuilding approaches has been poor. The related statebuilding praxis has generally been unable to respond to its critics. What is at stake is a recognition of peacebuilding's everyday political, social, economic, and cultural dynamics. This indicates the emergence of a post-liberal form of peace.

Does Transnational Mobilization Work for Language Minorities? André Michael Hein, 2014 This study scrutinizes the significance of transnational mobilization for language minorities, both with

regard to their ability and their motivation to undertake such action. It is designed as interpretative case study on Romanian minorities in the post-communist countries of Serbia, Bulgaria, Ukraine, and Hungary. The book concentrates on immobile and marginal groups outside the focus of international politics and research. It contributes to recent research on cosmopolitanism: only an in-depth study of actors' everyday reality can produce qualified claims on the tense relationship between local rootedness on the one hand and possibilities for international mobility on the other. This, in turn, is vital to assess the vigor of international processes such as globalization and European integration. Force Multipliers: The Instrumentalities of Imperialism Maximilian Forte, 2015-09 In the drive to accumulate ever more global power for the US state and its allies, both political and corporate, the quest for totalization confronts the challenge of overreach. To operate using smaller efforts to carry larger loads, US strategists have devised what they call force multipliers. Force multiplication is about leverage using partners and proxies in an expanding network. Forces are conceptualized in multi-dimensional terms. Anything in the world of cultural systems, social relationships, and material production can become force multipliers for imperialism, Chapters in this volume present diverse examples of force multiplication, ranging from Plan Colombia to Bulgarian membership in NATO and the US-Israeli relationship, from the New Alliance for Food Security to charitable aid and the control of migration, to the management of secrecy.

The Political Economy of Reforms and the Remaking of the Proletarian Class in China, 1980s-2010s Shan Shanne Huang, 2023-01-19 This book comprehensively investigates the position of China's working class between the 1980s and 2010s and considers the consequences of economic reforms in historical perspective. It argues the case that, far from the illusion during the Maoist period

that a new society had been established where the working classes held greater political and economic autonomy, economic reforms in the post-Mao era have led to the return of traditional Marxist proletariats in China. The book demonstrates how the reforms of Deng Xiaoping have led to increased economic efficiency at the expense of economic equality through an extensive case study of an SOE (state-owned enterprise) in Sichuan Province as well as wider discussions of the emergence of state capitalism on both a micro and macroeconomic level. The book also discusses workers' protests during these periods of economic reform to reflect the reformation of class consciousness in post-Mao China, drawing on Marx's concept of a transition from a 'class-in-itself' to a 'class-for-itself'. It will be valuable reading for students and scholars of Chinese economic and social history, as well as political economy, sociology, and politics.

Directions for sustainable agricultural water investments Ghosh, E., Kemp-Benedict, E.,

Huber-Lee, A., Nazareth, A., Oudra, I., 2022-04-11 Climate change, poverty, inequality, and other disruptive factors are changing the way water is used for agriculture. Although IFI investments are only one of the tools that can be used to address food and agricultural water security, they can be a critical catalyst for change. A research study carried out by the Stockholm Environment Institute,

under the direction of the FAO Investment Centre, examines IFI investments and financing mechanisms in agricultural water over the last decade (2010–2019) and identifies emerging goals, areas of investments and innovations. The study aims to provide IFIs and international development agencies insight into what has and has not worked in agricultural water investments, while offering promising new mechanisms and investment priorities for the future. The analysis focuses heavily on public investment as provided by IFIs, but also considers the role of private and public-private investment, and farmers as private investors and entrepreneurs. This publication is part of the Directions in Investment series under the FAO Investment Centre's Knowledge for Investment (K4I) programme.

Linking Optical and Chemical Properties of Dissolved Organic Matter in Natural Waters Christopher L. Osburn, Thomas S. Bianchi, 2017-01-17 A substantial increase in the number of studies using the optical properties (absorbance and fluorescence) of dissolved organic matter (DOM) as a proxy for its chemical properties in estuaries and the coastal and open ocean has occurred during the last decade. We are making progress on finding the actual chemical compounds or phenomena responsible for DOM's optical properties. Ultrahigh resolution mass spectrometry, in particular, has made important progress in making the key connections between optics and chemistry. But serious questions remain and the last major special issue on DOM optics and chemistry occurred nearly 10 years ago. Controversies remain from the non-specific optical properties of DOM that are not linked to discrete sources, and sometimes provide conflicting information. The use of optics, which is relatively

easier to employ in synoptic and high resolution sampling to determine chemistry, is a critical connection to make and can lead to major advances in our understanding of organic matter cycling in all aquatic ecosystems. The contentions and controversies raised by our poor understanding of the linkages between optics and chemistry of DOM are bottlenecks that need to be addressed and overcome.

Death Orders Anna Geifman, 2010-05-20 This fascinating study shows how terrorism as developed and practiced in Romanov Russia has, over the past century, manifested itself as the template for modern and postmodern terrorism as a universal sociocultural, psychological, and existential experience, irrespective of particular political causes, ethnic distinctions, and ideological boundaries. Arguing that Russia is the birthplace of modern terrorism, *Death Orders: The Vanguard of Modern Terrorism in Revolutionary Russia* uses the nation as a case study of psycho-historical patterns of worldwide terrorist activity during the past century. Key features of early-20th century Russian political extremism serve as models for terrorist experiences in other periods and regions as author Anna Geifman builds a typology of a universal phenomenon. The book shows how, in Russia and elsewhere, terrorists' objectives have degenerated from punishment of individual adversaries and attempts to intimidate political elites to indiscriminate acts of political violence. It shifts attention from ideology to practices that had been previously hidden, ignored, or rationalized, demonstrating that what terrorists say about their motives may not be what actually drives them to brutality. By looking closely at Russian precedents for the general experience of modern political violence, the book helps illuminate many obscure aspects of terrorism today.

Sustainable Rural Development Perspective and Global Challenges Orhan Özçatalbaş, 2023-03-29 Agriculture is vitally important to humanity. Climate change, environmental pollution, global warming,

and the COVID-19 pandemic have highlighted the importance of food safety and food security. This book discusses sustainable agriculture and its importance in combatting the adverse effects of climate change and meeting the world's food demand. And essentially the technologies to be used for CE to prevent climate change should be "common property of humanity". This may be a new paradigm, but the real issue is the future of the earth and ensuring the continuity of sustainable life. It is a fact that the creation of such a culture of sharing will serve all the SDGs put forward by the UN.

Handbook of Special Education James M. Kauffman, Daniel P. Hallahan, 2011-05-15 Special education is now an established part of public education in the United States—by law and by custom. However, it is still widely misunderstood and continues to be dogged by controversies related to such things as categorization, grouping, assessment, placement, funding, instruction, and a variety of legal issues. The purpose of this 13-part, 57-chapter handbook is to help profile and bring greater clarity to this sprawling and growing field. To ensure consistency across the volume, chapter authors review and integrate existing research, identify strengths and weaknesses, note gaps in the literature, and discuss implications for practice and future research. Key features include: Comprehensive Coverage—Fifty-seven chapters cover all aspects of special education in the United States including cultural and international comparisons. Issues & Trends—In addition to synthesizing empirical findings and providing a critical analysis of the status and direction of current research, chapter authors discuss issues related to practice and reflect on trends in thinking. Categorical Chapters—In order to provide a comprehensive and comparative treatment of the twelve categorical chapters in section IV, chapter authors were asked to follow a consistent outline: Definition, Causal Factors, Identification, Behavioral Characteristics, Assessment, Educational Programming, and Trends and Issues.

Expertise—Edited by two of the most accomplished scholars in special education, chapter authors include a carefully chosen mixture of established and rising young stars in the field. This book is an appropriate reference volume for anyone (researchers, scholars, graduate students, practitioners, policy makers, and parents) interested in the state of special education today: its research base, current issues and practices, and future trends. It is also appropriate as a textbook for graduate level courses in special education.

Pathways towards lower emissions Food and Agriculture Organization of the United Nations, 2023-12-08 This FAO report presents a comprehensive global assessment of greenhouse gas emissions from livestock systems, utilizing FAO's Global Livestock Environmental Assessment Model (GLEAM) based on the most recent available data. GLEAM also considers indirect emissions from upstream activities, such as feed and other inputs, and part of the downstream processes including post-farm transport, processing and packaging of raw products. Drawing from an extensive literature review, this publication illustrates pathways towards lower emissions through a set of interventions on both the supply and the demand sides of animal production.
