Revelations of Divine Love Julian of Norwich, 2019-11-13 The fourteenth-century anchorite known as Julian of Norwich offered fervent prayers for a deeper understanding of Christ's passion. The holy woman's petitions were answered with a series of divine revelations that she called shewings. Her mystic visions revealed Christ's sufferings with extreme intensity, but they also confirmed God's constant love for humanity and infinite capacity for forgiveness. Julian of Norwich's Revelations of Divine Love have had a lasting influence on Christian thought. Written in immediate, compelling terms, her experiences remain among the most original and accessible expressions of medieval mysticism. This edition contains both the short text, which is mainly an account of the shewings and Julian's initial analysis of their meaning, and the long text, completed some 20 years later and offering daringly speculative interpretations.

Voice and Involvement at Work Paul J. Gollan, Bruce E. Kaufman, Daphne Taras, Adrian Wilkinson, 2014-08-21 In the last decade, nonunion employee representation (NER) has become a much discussed topic in the fields of human resource management, employment relations, and employment/labor law. This book examines the purpose, structure, and performance of various types of employee representation bodies created by companies in non-union settings to promote collective forums for voice and involvement at the workplace. This unique volume presents the first longitudinal evidence on the performance, success, and failure of NER plans over an extended time period. Consisting of twelve detailed, in-depth case studies of actual NER plans in operation across four countries, this volume provides unparalleled evidence on such matters as: the motives behind the initial establishment of NER, different organizational forms of NER in industry, key success and failure factors over the long-term, pro and con evaluations for employers and employees, and more. Voice and Involvement at Work captures an unequalled international and comparative perspective through a wide cross-section of different NER

forms.

This book offers a fresh perspective on the historical, economic, and cultural foundations of capitalism, cities, and climate change. By exploring the intersection of urbanization, consumerism, and colonialism, the book sheds new light on the origins and development of the economic system that has shaped our world today. What sets this book apart is its unique approach, which challenges conventional wisdom and offers new insights into the complex relationships between culture, politics, and economics. The book is intended for readers interested in the history and evolution of capitalism and its impact on society, as well as those interested in climate change and urbanization. The content level is accessible for general readers, yet sophisticated enough to appeal to scholars and researchers. The two most important features of the book are its fresh perspective on the history of mercantilism and its examination of the economic landscape of cities and climate change. By reading this book, readers gain a deeper understanding of the complex relationships between urbanization, colonialism, and economic policies, and their impact on contemporary society.

A History of Civilization in 50 Disasters (History in 50) Gale Eaton, 2015-10-23 *2016

IBPA Benjamin Franklin Silver Award Winner* The earth shakes and cracks open. Volcanoes erupt. Continents freeze, bake, and flood. Droughts parch the land. Wildfires and hundred-year storms consume anything in their paths. Invisible clouds of disease and pestilence probe for victims. Tidal waves sweep ashore from the vast sea. The natural world is a

dangerous place, but one species has evolved a unique defense against the hazards: civilization. Civilization rearranges nature for human convenience. Clothes and houses keep us warm; agriculture feeds us; medicine fights our diseases. It all works—most of the time. But key resources lie in the most hazardous places, so we choose to live on river flood plains, on the slopes of volcanoes, at the edge of the sea, above seismic faults. We pack ourselves into cities, Petri dishes for germs. Civilization thrives on the edge of disaster. And what happens when natural forces meet molasses holding tanks, insecticides, deepwater oil rigs, nuclear power plants? We learn the hard way how to avoid the last disaster—and maybe how to create the next one. What we don't know can, indeed, hurt us. This book's white-knuckled journey from antiquity to the present leads us to wonder at times how humankind has survived. And yet, as Author Gale Eaton makes clear, civilization has advanced not just in spite of disasters but in part because of them. Hats off to human resilience, ingenuity, and perseverance! They've carried us this far; may they continue to do so into our ever-hazardous future. The History in 50 series explores history by telling thematically linked stories. Each book includes 50 illustrated narrative accounts of people and events—some well-known, others often overlooked—that, together, build a rich connect the-dots mosaic and challenge conventional assumptions about how history unfolds. Dedicated to the premise that history is the greatest story ever told. Includes a mix of “greatest hits” with quirky, surprising, provocative accounts. Challenges readers to think and engage. Includes a glossary of technical terms; sources by chapter; teaching resources as jumping-off points for student research; and endnotes. Fountas & Pinnell Level Z+

Patent Settlements in the Pharmaceutical Industry under US Antitrust and EU Competition Law Amalia Athanasiadou, 2018-08-14 Reverse payment settlements or “pay-for-delay agreements” between originators and generic drug manufacturers create heated debates regarding the balance between competition and intellectual property law. These settlements touch upon sensitive issues such as timely generic entry and access to affordable pharmaceuticals and also the need to preserve innovation incentives for originators and to strengthen the pipeline of life-saving pharmaceuticals. This book is one of the first to critically and comparatively analyse how such patent settlements and various other strategies employed by the pharmaceutical industry are scrutinised by both United States (US) and European courts and enforcement authorities, and to discuss the applicable legal tests and the main criteria used for their assessment. The book’s ultimate objective is to provide guidance to the pharmaceutical industry regarding the types of patent settlements, strategies and conduct which may be problematic from US antitrust and European Union (EU) competition law perspectives and to assist practitioners in structuring settlements which are both efficient and compliant. To this end, an exhaustive legal analysis of some of the most controversial issues regarding pharmaceutical patent settlements is provided, including: – the lengthy split among US Circuit Courts on the issue of pay-for-delay settlements, its resolution by the US Supreme Court in *FTC v. Actavis* and subsequent jurisprudence; – the decision of *Lundbeck v. Commission* by the European General Court and the *Servier* decision of the European Commission; – the *Roche/Novartis* decision of the European Court of Justice and the most important decisions

by National Competition Authorities on pharma patent settlements in the EU; – an overview of other types of strategies such as product-hopping and product reformulations, no-authorised generic commitments, problematic side-deals, mechanisms affecting generic substitution; – the rejection of the “scope of the patent” test in both the US and the EU and the balancing of patent law and antitrust law considerations in the prevailing applicable tests; – the benefits of settlements and the main criteria for assessing their legitimacy under US antitrust and EU competition law. The analysis provides concrete examples of both illegitimate and legitimate settlements and strategies, emphasising on conduct that falls within a grey zone and on the circumstances and criteria under which such conduct could be deemed problematic from an antitrust perspective. This book will serve as a valuable guide for pharmaceutical companies wishing to minimise the risk of engaging in conduct that could potentially infringe US antitrust and EU competition law. It further aims to save courts and enforcement agencies and also practitioners and academics considerable time and resources by providing an exhaustive analysis of the relevant caselaw, with the ultimate goal to increase legal certainty on the most controversial aspects of patent settlements in the pharmaceutical industry.

Upgrading and Repairing Servers Scott Mueller,Mark Edward Soper,Barrie Sosinsky,2006-04-24 As the price of servers comes down to the level of desktop PCs, many small- and medium-sized businesses are forced to provide their own server setup, maintenance and support, without the high-dollar training enjoyed by their big corporation counterparts. Upgrading and Repairing Servers is the first line of defense for small- and

medium-sized businesses, and an excellent go-to reference for the experienced administrators who have been asking for a reference guide like this one for a long time! It's all here in one, incredibly useful tome that you will refer to again and again. Inside is in-depth coverage of server design and implementation, building and deploying, server hardware components, network and backup operations, SAN, fault tolerance, server racks, server rooms, server operating systems, as well as SUN Microsystems servers. No other computer hardware book has ever dared tackle this enormous topic - until now!

Global Climate Change and Extreme Weather Events Institute of Medicine,Board on Global Health,Forum on Microbial Threats,2008-09-23 Long before the germ theory of disease was described, late in the nineteenth century, humans knew that climatic conditions influence the appearance and spread of epidemic diseases. Ancient notions

about the effects of weather and climate on disease remain embedded in our collective consciousness-through expressions such as cold for rhinovirus infections; malaria, derived from the Latin for bad air; and the common complaint of feeling under the weather. Today, evidence is mounting that earth's climate is changing at a faster rate than previously appreciated, leading researchers to view the longstanding relationships between climate and disease with new urgency and from a global perspective. On December 4 and 5, 2007, the Forum on Microbial Threats hosted a public workshop in Washington, DC to consider the possible infectious disease impacts of global climate change and extreme weather events on human, animal, and plant health, as well as their expected implications for global and national security.
