**Diagrammatic Representation and Inference** Gem Stapleton,John Howse,John Lee,2008-09-22 Diagrams is an international and interdisciplinary conference series, covering all aspects of research on the theory and application of diagrams. Recent technological advances have enabled the large-scale adoption of diagrams in a diverse range of areas. Increasingly sophisticated visual representations are emerging and, to enable effective communication, insight is required into how diagrams are used and when they are appropriate for use. The pervasive, everyday use of diagrams for communicating information and ideas serves to illustrate the importance of providing a sound understanding of the role that diagrams can, and do, play. Research in the field of diagrams aims to improve our understanding of the role of diagrams, sketches and other visualizations in communication, computation, cognition, creative thought, and problem solving. These concerns have triggered a surge of interest in the study of diagrams. The study of diagrammatic communication as a whole must be pursued as an interdisciplinary endeavour. Diagrams 2008 was the 7th event in this conference series, which was launched in Edinburgh during September 2000. Diagrams attracts a large number of researchers from virtually all related fields, placing the conference as a major international event in the area. Diagrams is the only conference that provides a united forum for all areas that are concerned with the study of diagrams: for example, architecture, artificial intelligence, cartography, cognitive science, computer science, education, graphic design, history of science, human-computer interaction, linguistics, logic, mathematics, philosophy, psychology, and software modelling. We see issues from all of these fields discussed in the papers collected in the present volume.

*Violations of the Rules Applicable in Non-International Armed Conflicts and Their Possible Causes* Omar Abdulle Alasow,2010-05-17 While all armed conflicts are marked by violations of international humanitarian law, non-international armed conflicts appear to be characterised by even more serious violations of international humanitarian law on a colossal scale. This study is aimed at understanding the possible factors that may cause parties to non-international armed conflicts to engage in violations despite the fact that not only international humanitarian law but also other bodies of rules (e.g. legal and moral) impose restrictions and obligations similar to international humanitarian law. Somalia, which for over two decades has been experiencing internal armed conflicts marked by widespread violations, is a typical case.

*The American Cardiovascular Pandemic* David Gordon,2021-10-19 As Americans and citizens of other industrializing countries began to enjoy lives of increasing affluence and ease during the first half of the 20th century, a rising tide of heart attacks and strokes displaced infectious diseases as the leading cause of death, killing millions in the United States and throughout the world. Although cardiovascular disease remains serious and widespread, the significant decline of per capita deaths is one of the greatest accomplishments of modern public health and medicine. Death rates from heart attack and stroke have fallen dramatically by 80% in the past 50 years -- the progress has been hard won by a combination of basic and applied laboratory research, broad and far-reaching epidemiological studies by physicians, scientists, and public health experts. Cardiovascular disease is no longer viewed as an inevitable feature of the natural course of aging, and complacency has given way to hope. This book focuses on developments that influenced the rise and decline of cardiovascular mortality since 1900, but also includes insider insights from the author, a 42-year NIH employee.

Delivering Dispute Resolution Christopher Hodges,2019-10-17 This book reviews the techniques, mechanisms and architectures of the way disputes are processed in England and Wales. Adopting a comparative approach, it evaluates the current state of the main different types of dispute resolution systems, including business, consumer, personal injury, family, property, employment and claims against the state. It provides a holistic overview of the whole system and suggests both systemic and detailed reforms. Examining dispute resolution pathways from users' perspectives, the book highlights options such as ombudsmen, regulators, tribunals and courts as well as mediation and other ADR and ODR approaches. It maps numerous sectoral developments to see if learning might be spread to other sectors. Several recurrent themes arise, including the diversification in the use of techniques; adoption of digital, online and artificial technology; cost and funding constraints; the emergence of new intermediaries; the need to focus accessibility arrangements for people and businesses that need help with their problems; and identifying effective ways for achieving behavioural change. This timely study analyses the shift from adversarial legalism to softer means of resolving social problems, and points to a major opportunity to devise an imaginative and holistic strategic vision for the jurisdiction.
