The Art of Military Innovation Edward N. Luttwak,Eitan Shamir,2023-10-10 A world-leading military strategist and an IDF insider explain the improbable success of the Israeli armed forces. When the Israel Defense Forces was established in May 1948, it was small, poorly equipped, and already at war. Lacking sufficient weaponry or the domestic industrial base to produce it, the newborn military was forced to make do with whatever it could get its hands on. That spirit of improvisation carried the IDF to a decisive victory in the First Arab-Israeli War. Today the same spirit has made the IDF the most powerful military in the Middle East and among the most capable in the world. In *The Art of Military Innovation*, Edward N. Luttwak and Eitan Shamir trace the roots of this astounding success. What sets the IDF apart, they argue, is its singular organizational structure. From its inception, it has been the world's only one-service military, encompassing air, naval, and land forces in a single institutional body. This unique structure, coupled with a young officer corps, allows for initiative from below. The result is a nimble organization inclined toward change rather than beholden to tradition. The IDF has fostered some of the most significant advances in military technology of the past seventy years, from the first wartime use of drones to the famed Iron Dome missile defense system, and now the first laser weapon, Iron Beam. Less-heralded innovations in training, logistics, and human resources have been equally important. Sharing rich insights and compelling stories, Luttwak and Shamir reveal just what makes the IDF so agile and effective.

Politics as Usual Thomas Pogge,2010-05-17 Worldwide, human lives are rapidly improving. Education, health-care, technology, and political participation are becoming ever more universal, empowering human beings everywhere to enjoy security, economic sufficiency, equal citizenship, and a life in dignity. To be sure, there are some specially difficult areas disfavoured by climate, geography, local diseases, unenlightened cultures or political tyranny. Here progress is slow, and there may be set-backs. But the affluent states and many international organizations are working steadily to extend the blessings of modernity through trade and generous development assistance, and it won't be long until the last pockets of severe oppression and poverty are gone. Heavily promoted by Western governments and media, this comforting view of the world is widely shared, at least among the affluent. Pogge's new book presents an alternative view: Poverty and oppression persist on a massive scale; political and economic inequalities are rising dramatically both intra-nationally and globally. The affluent states and the international organizations they control knowingly contribute greatly to these evils – selfishly promoting rules and policies harmful to the poor while hypocritically pretending to set and promote ambitious development goals. Pogge's case studies include the \$1/day poverty measurement exercise, the cosmetic statistics behind the first Millennium Development Goal, the War on Terror, and the proposed relaxation of the constraints on humanitarian intervention. A powerful moral analysis that shows what Western states would do if they really cared about the values they profess.

Green Chemistry in Environmental Sustainability and Chemical Education Virinder S. Parmar,Priti Malhotra,Divya Mathur,2018-08-13 Chemistry is considered to be one of the prime causes of environmental pollution and degradation. The United Nations General Assembly also addressed the environmental challenges in its Sustainable Development Goals (SDGs), which have been adopted in 2015. A closer look shows that to meet these goals chemistry will play an important role. Green chemistry encompasses design and synthesis of environmentally benign chemical processes, green approaches to minimize and/or remediate environmental pollution, the development of biomaterials, biofuel, and bioenergy production, biocatalysis, and policies and ethics in green chemistry. When products in use today become waste, we need to treat that waste so that hazardous substances are not re-circulated into new products. In this context, circular economy is also an important point of discussion, which focuses on recycling, reuse and use of renewable sources. The theme of the International Conference on Green Chemistry in Environmental Sustainability & Chemical Education (ICGC-2016) held in Delhi from 17-18 November 2016 was to discuss the emerging

green trends in the direction of sustainability and environmental safety. ICGC-2016 consisted of keynote, plenary and invited lectures, panel discussion, contributed oral papers and poster presentations. The conference provided a platform for high school students, undergraduate and postgraduate students, teaching fraternity and young researchers to interact with eminent scientists and academicians from all over the world who shared their valuable views, experience and research on the harmonious methods in chemistry for a sustainable environment. This volume of proceedings from the conference provides an opportunity for readers to engage with a selection of refereed papers that were presented during the ICGC-2016 conference. The overarching goal of this book is to discuss most recent innovations and concerns in green chemistry as well as practical challenges encountered and solutions adopted to remediate a scathed environment into a pristine one. It includes an extensive variety of contributions from participants of ICGC-2016 that demonstrate the importance of multidisciplinary and interdisciplinary approach to problem solving within green chemistry and environmental management. The proceedings is thus a green chemistry monograph resulting from the fruitful deliberations in the conference, which will deeply enhance awareness about our responsibility towards the environment.
