Pollution Control Handbook for Oil and Gas Engineering Nicholas P. Cheremisinoff, 2016-04-20 This is a major new handbook that covers hundreds of subjects that cross

numerous industry sectors; however, the handbook is heavily slanted to oil and gas environmental management, control and pollution prevention and energy efficient practices. Multi-media pollution technologies are covered : air, water, solid waste, energy. Students, technicians, practicing engineers, environmental engineers, environmental managers, chemical engineers, petroleum engineers, and environmental attorneys are all professionals who will benefit from this major new reference source. The handbook is organized in three parts. Part A provides an extensive compilation of abbreviations and concise glossary of pollution control and engineering terminology. More than 400 terms are defined. The section is intended to provide a simple look-up guide to confusing terminology used in the regulatory field, as well as industry jargon. Cross referencing between related definitions and acronyms are provided to assist the user. Part B provides physical properties and chemical safety information. This part is not intended to be exhaustive; however it does provide supplemental information that is useful to a number of the subject entries covered in the main body of the handbook. Part C is the Macropedia of Subjects. The part is organized as alphabetical subject entries for a wide range of pollution controls, technologies, pollution prevention practices and tools, computational methods for preparing emission estimates and emission inventories and much more. More than 100 articles have been prepared by the author, providing a concise overview of each subject, supplemented by sample calculation methods and examples where appropriate, and references. Subjects included are organized and presented in a macropedia format to assist a user in gaining an overview of the subject, guidance on performing certain calculations or estimates as in cases pertinent to preliminary sizing and selection of pollution controls or in preparing emissions inventories for reporting purposes, and recommended references materials and web sites for more in-depth information, data or computational tools. Each subject

entry provides a working overview of the technology, practice, piece of equipment, regulation, or other relevant issue as it pertains to pollution control and management. Cross referencing between related subjects is included to assist the reader to gain as much of a practical level of knowledge.

Anti-Cancer N-Heterocyclic Carbene Complexes of Gold(III), Gold(I) and Platinum(II) Taotao Zou, 2016-02-19
This thesis focuses on the development of gold- and non-classical platinum-based anti-cancer agents that display distinctively different anti-cancer mechanisms compared to the commonly used cisplatin. These metal complexes contain N-heterocyclic carbene (NHC) ligands which are able to form strong M-C(NHC) bonds, conferring high stability and favorable lipophilicity, reactivity and binding specificity of metal complexes on biomolecules. The author demonstrates significant advances made in anti-cancer gold(III), gold(I) and platinum(II) complexes. Detailed chemical synthesis, in vitro and/or in vivo anti-cancer activities are clearly presented including: (i) a class of Au(III) complexes containing a highly fluorescent N[^]N[^]N ligand and NHC ligand that simultaneously act as fluorescent thiol “switch-on” probes and anti-cancer agents; (ii) a dinuclear gold(I) complex with a mixed diphosphine and bis(NHC) ligand displaying favorable stability and showing significant inhibition of tumor growth in two independent mice models with no observable side effects; and (iii) a panel of stable luminescent cyclometalated platinum(II) complexes exhibiting high specificity to localize to the endoplasmic reticulum (ER) domain, inducing ER stress and cell apoptosis. These works highlight the clinical potential that gold and platinum complexes offer for cancer treatment.

The Art of Military Innovation Edward N. Luttwak,Eitan Shamir,2023-10-10 A world-leading military strategist and an IDF insider explain the improbable success of the Israeli armed forces. When the Israel Defense Forces was established in May 1948, it was small, poorly equipped, and already at war. Lacking sufficient weaponry or the domestic industrial base to produce it, the newborn military was forced to make do with whatever it could get its hands on. That spirit of improvisation carried the IDF to a decisive victory in the First Arab-Israeli War. Today the same spirit has made the IDF the most powerful military in the Middle East and among the most capable in the world. In *The Art of Military Innovation*, Edward N. Luttwak and Eitan Shamir trace

the roots of this astounding success. What sets the IDF apart, they argue, is its singular organizational structure. From its inception, it has been the world's only one-service military, encompassing air, naval, and land forces in a single institutional body. This unique structure, coupled with a young officer corps, allows for initiative from below. The result is a nimble organization inclined toward change rather than beholden to tradition. The IDF has fostered some of the most significant advances in military technology of the past seventy years, from the first wartime use of drones to the famed Iron Dome missile defense system, and now the first laser weapon, Iron Beam. Less-heralded innovations in training, logistics, and human resources have been equally important. Sharing rich insights and compelling stories, Luttwak and Shamir reveal just what makes the IDF so agile and effective.

Law, Ethics, and the War on Terror Matthew

Evangelista,2013-04-22 In recent years the mass murder of thousands of innocent civilians by al Qaeda terrorists has plumbed the depths of criminality and immorality. Yet it is the response to those attacks, particularly by the United States, that has provoked widespread accusations that the anti-terrorist cure may be worse than the terrorist disease. This book explores the key legal and ethical controversies that arose in the wake of the brutal attacks of 11 September 2001. After the Cold War, progress in human rights and limitations on warfare created an impression that global civil society had emerged to challenge the dominance of states and establish new norms to guide their behavior. The events of 9/11, however, witnessed a reassertion of state prerogatives, reflected in challenges to the Geneva Conventions and the stigma against torture. Focusing on core debates about preventive war and the implications of targeted assassination, kidnapping, indefinite detention, and the torture of suspected terrorists, Evangelista asks whether state practice will further undermine the very norms of international law and morality, or whether efforts to combat terrorism can be brought back into conformity with ethical and legal standards.
