Help at Any Cost Maia Szalavitz,2006 The troubled-teen industry, with its scaremongering and claims of miraculous changes in behavior through harsh discipline, has existed in one form or another for decades, despite a dearth of evidence supporting its methods. And the growing number of programs that make up this industry are today finding more customers than ever. Maia Szalavitz's Help at Any Cost is the first in-depth investigation of this industry and its practices, starting with its roots in the cultlike sixties rehabilitation program Synanon and Large Group Awareness Training organizations likeest in the seventies; continuing with Straight, Inc., which received Nancy Reagan's seal of approval in the eighties; and culminating with a look at the World Wide Association of Specialty Programs-the leading force in the industry today-which has begun setting up shop in foreign countries to avoid regulation. Szalavitz uncovers disturbing findings about these programs' methods, including allegation of physical and verbal abuse, and presents us with moving, often horrifying, first-person accounts of kids who made it through-as well as stories of those who didn't survive. The book also contains a thoughtfully compiled guide for parents, which details effective treatment alternatives. Weaving careful reporting with astute analysis, Maia Szalavitz has written an important and timely survey that will change the way we look at rebellious teens-and the people to whom we entrust them. Help at Any Cost is a vital resource with an urgent message that will draw attention to a compelling issue long overlooked.

Accelerating Modernization with Agile Integration Adeline SE Chun,Aiden Gallagher,Amar A Shah,Callum Jackson,Claudio Tagliabue,Iliya Dimitrov,James Blackburn,Joel Gomez,Kim Clark,Lee Gavin,Maria Menendez,Martin Evans,Mohammed Alreedi,Murali Sitaraman,Nick Glowacki,Shishir Narain,Timothy Quigly,Tony Curcio,Ulas Cubuk,Vasfi Gucer,IBM Redbooks,2020-07-01 The organization pursuing digital transformation must embrace new ways to use and deploy integration technologies, so they can move quickly in a manner appropriate to the goals of multicloud, decentralization, and microservices. The integration layer must transform to allow organizations to move boldly in building new customer experiences, rather than forcing models for architecture and development that pull away from maximizing the organization's productivity. Many organizations have started embracing agile application techniques, such as microservice architecture, and are now seeing the benefits of that shift. This approach complements and accelerates an enterprise's API strategy. Businesses should also seek to use this approach to modernize their existing integration and messaging infrastructure to achieve more effective ways to manage and operate their integration

services in their private or public cloud. This IBM® Redbooks® publication explores the merits of what we refer to as agile integration; a container-based, decentralized, and microservice-aligned approach for integration solutions that meets the demands of agility, scalability, and resilience required by digital transformation. It also discusses how the IBM Cloud Pak for Integration marks a significant leap forward in integration technology by embracing both a cloud-native approach and container technology to achieve the goals of agile integration. The target audiences for this book are cloud integration architects, IT specialists, and application developers.

Future U.S. Workforce for Geospatial Intelligence National Research Council,Policy and Global Affairs,Board on Higher Education and Workforce,Division on Earth and Life Studies,Board on Earth Sciences and Resources,Committee on the Future U.S. Workforce for Geospatial Intelligence,2013-04-28 We live in a changing world with multiple and evolving threats to national security, including terrorism, asymmetrical warfare (conflicts between agents with different military powers or tactics), and social unrest. Visually depicting and assessing these threats using imagery and other geographically-referenced information is the mission of the National Geospatial-Intelligence Agency (NGA). As the nature of the threat evolves, so do the tools, knowledge, and skills needed to respond. The challenge for NGA is to maintain a workforce that can deal with evolving threats to national security, ongoing scientific and technological advances, and changing skills and expectations of workers. Future U.S. Workforce for Geospatial Intelligence assesses the supply of expertise in 10 geospatial intelligence (GEOINT) fields, including 5 traditional areas (geodesy and geophysics, photogrammetry, remote sensing, cartographic science, and geographic information systems and geospatial analysis) and 5 emerging areas that could improve geospatial intelligence (GEOINT fusion, crowdsourcing, human geography, visual analytics, and forecasting). The report also identifies gaps in expertise relative to NGA's needs and suggests ways to ensure an adequate supply of geospatial intelligence expertise over the next 20 years.

Natural Language Processing with Python Steven Bird,Ewan Klein,Edward Loper,2009-06-12 This book offers a highly accessible introduction to natural language processing, the field that supports a variety of language technologies, from predictive text and email filtering to automatic summarization and translation. With it, you'll learn how to write Python programs that work with large collections of unstructured text. You'll access richly annotated datasets using a comprehensive range of linguistic data structures, and you'll understand the main algorithms for analyzing the content and structure of

written communication. Packed with examples and exercises, Natural Language Processing with Python will help you: Extract information from unstructured text, either to guess the topic or identify named entities Analyze linguistic structure in text, including parsing and semantic analysis Access popular linguistic databases, including WordNet and treebanks Integrate techniques drawn from fields as diverse as linguistics and artificial intelligence This book will help you gain practical skills in natural language processing using the Python programming language and the Natural Language Toolkit (NLTK) open source library. If you're interested in developing web applications, analyzing multilingual news sources, or documenting endangered languages -- or if you're simply curious to have a programmer's perspective on how human language works -- you'll find Natural Language Processing with Python both fascinating and immensely useful.

Think Bayes Allen B. Downey,2021-05-18 If you know how to program, you're ready to tackle Bayesian statistics. With this book, you'll learn how to solve statistical problems with Python code instead of mathematical formulas, using discrete probability distributions rather than continuous mathematics. Once you get the math out of the way, the Bayesian fundamentals will become clearer and you'll begin to apply these techniques to real-world problems. Bayesian statistical methods are becoming more common and more important, but there aren't many resources available to help beginners. Based on undergraduate classes taught by author Allen B. Downey, this book's computational approach helps you get a solid start. Use your programming skills to learn and understand Bayesian statistics Work with problems involving estimation, prediction, decision analysis, evidence, and Bayesian hypothesis testing Get started with simple examples, using coins, dice, and a bowl of cookies Learn computational methods for solving real-world problems

Apache Spark Implementation on IBM z/OS Lydia Parziale,Joe Bostian,Ravi Kumar,Ulrich Seelbach,Zhong Yu Ye,IBM Redbooks,2016-08-13 The term big data refers to extremely large sets of data that are analyzed to reveal insights, such as patterns, trends, and associations. The algorithms that analyze this data to provide these insights must extract value from a wide range of data sources, including business data and live, streaming, social media data. However, the real value of these insights comes from their timeliness. Rapid delivery of insights enables anyone (not only data scientists) to make effective decisions, applying deep intelligence to every enterprise application. Apache Spark is an integrated analytics framework and runtime to accelerate and simplify algorithm development, depoyment, and realization of business insight from analytics. Apache Spark on IBM® z/OS® puts the open source engine, augmented with unique differentiated features, built specifically

for data science, where big data resides. This IBM Redbooks® publication describes the installation and configuration of IBM z/OS Platform for Apache Spark for field teams and clients. Additionally, it includes examples of business analytics scenarios.

The introductory and connective essays have been expanded and updated, and completely new sections have been added on the vital topics of today.

Saving Normal Allen Frances, M.D.,2013-05-14 From the most powerful psychiatrist in America (New York Times) and the man who wrote the book on mental illness (Wired), a deeply fascinating and urgently important critique of the widespread medicalization of normality Anyone living a full, rich life experiences ups and downs, stresses, disappointments, sorrows, and setbacks. These challenges are a normal part of being human, and they should not be treated as psychiatric disease. However, today millions of people who are really no more than worried well are being diagnosed as having a mental disorder and are receiving unnecessary treatment. In Saving Normal, Allen Frances, one of the world's most influential psychiatrists, warns that mislabeling everyday problems as mental illness has shocking implications for individuals and society: stigmatizing a healthy person as mentally ill leads to unnecessary, harmful medications, the narrowing of horizons, misallocation of medical resources, and draining of the budgets of families and the nation. We also shift responsibility for our mental well-being away from our own naturally resilient and self-healing brains, which have kept us sane for hundreds of thousands of years, and into the hands of Big Pharma, who are reaping multi-billion-dollar profits. Frances cautions that the new edition of the bible of psychiatry, the Diagnostic and Statistical Manual of Mental Disorders-5 (DSM-5), will turn our current diagnostic inflation into hyperinflation by converting millions of normal people into mental patients. Alarmingly, in DSM-5, normal grief will become Major Depressive Disorder; the forgetting seen in old age is Mild Neurocognitive Disorder; temper tantrums are Disruptive Mood Dysregulation Disorder; worrying about a medical illness is Somatic Symptom Disorder; gluttony is Binge Eating Disorder; and most of us will qualify for adult Attention Deficit Disorder. What's more, all of these newly invented conditions will worsen the cruel paradox of the mental health industry: those who desperately need psychiatric help are left shamefully neglected, while the worried well are given the bulk of the treatment, often at their own detriment. Masterfully

charting the history of psychiatric fads throughout history, Frances argues that whenever we arbitrarily label another aspect of the human condition a disease, we further chip away at our human adaptability and diversity, dulling the full palette of what is normal and losing something fundamental of ourselves in the process. Saving Normal is a call to all of us to reclaim the full measure of our humanity.

Kazakhstan: Accelerating Economic Diversification Kym Anderson,Giovanni Capannelli,Edimon Ginting,Kiyoshi Taniguchi,2018-08-01 Kazakhstan has the potential to become an economic leader in Central Asia. Relying on oil and gas alone, however, will not produce the long-run level of growth needed to meet this potential. Reforms geared to improve the business climate, enhance competitiveness, and increase private sector participation are essential. This book examines reforms to accelerate economic diversification in the country. This involves not only modernizing and using public resources in agriculture more efficiently to increase productivity, but also transitioning of manufacturing toward high-potential exports to help the country's industrial development and create employment opportunities. Upgrading innovation of oilfield services and improving transport and logistics are important to increase participation in the global value chains.

Families and Food in Hard Times Rebecca O'Connell ,Julia Brannen,2021-05-24 Food is fundamental to health and social participation, yet food poverty has increased in the global North. Adopting a realist ontology and taking a comparative case approach, Families and Food in Hard Times addresses the global problem of economic retrenchment and how those most affected are those with the least resources. Based on research carried out with low-income families with children aged 11-15, this timely book examines food poverty in the UK, Portugal and Norway in the decade following the 2008 financial crisis. It examines the resources to which families have access in relation to public policies, local institutions and kinship and friendship networks, and how they intersect. Through 'thick description' of families' everyday lives, it explores the ways in which low income impacts upon practices of household food provisioning, the types of formal and informal support on which families draw to get by, the provision and role of school meals in children's lives, and the constraints upon families' social participation involving food. Providing extensive and intensive knowledge concerning the conditions and experiences of low-income parents as they endeavour to feed their families, as well as children's perspectives of food and eating in the context of low income, the book also draws on the European social science literature on food and families to shed light on the causes and consequences of food poverty in austerity Europe.

The Next Arms Race Henry D. Sokolski,2015-01-31 With most of the world's advanced economies now stuck in recession; Western support for defense cuts and nuclear disarmament increasing; and a major emerging Asian power at odds with its neighbors and the United States; it is tempting to think our times are about to rhyme with a decade of similar woes—the disorderly 1930s.Might we again be drifting toward some new form of mortal national combat? Or, will our future more likely ape the near-half-century that defined the Cold War—a period in which tensions between competing states ebbed and flowed but peace mostly prevailed by dint of nuclear mutual fear and loathing?The short answer is, nobody knows. This much, however, is clear: The strategic military competitions of the next 2 decades will be unlike any the world has yet seen. Assuming U.S., Chinese, Russian, Israeli, Indian, French, British, and Pakistani strategic forces continue to be modernized and America and Russia continue to reduce their strategic nuclear deployments, the next arms race will be run by a much larger number of contestants—with highly destructive strategic capabilities far more closely matched and capable of being quickly enlarged than in any other previous period in history.

Does Religion Make a Difference? Andreas Heuser,Jens Koehrsen,2020-05-08 Religions are increasingly being regarded as relevant partners in international development cooperation due to their special attributes. However, to date there has been little research into what the special attributes of religious development agencies actually are or how such organisations employ them. What resources do religious NGOs draw on in development cooperation? How do such NGOs differ from other development agencies? Does their engagement make a considerable difference to collaborative development work? Using empirical case studies and theoretical analysis, the contributions in this book address these questions. In doing so, they examine different religions and their collaborative development work in various regions of the world, and chart the most recent changes in religions. With contributions by Jeffrey Haynes, Katherine Marshall, Andreas Heuser, Jens Koehrsen, Dena Freeman,
