Pervasive Computing Handbook Uwe Hansmann,Lothar Merk,Martin S. Nicklous,Thomas Stober,2013-04-17 This book is a guide for the world of Pervasive Computing. It describes a new class of computing devices which are becoming omnipresent in every day life. They make information access and processing easily available for everyone from anywhere at any time. Mobility, wireless connectivity, diversity, and ease-of-use are the magic keywords of Pervasive Computing. The book covers these front-end devices as well as their operating systems and the back-end infrastructure which integrate these pervasive components into a seamless IT world. A strong emphasis is placed on the underlying technologies and standards applied when building up pervasive solutions. These fundamental topics include commonly used terms such as XML, WAP, UMTS, GPRS, Bluetooth, Jini, transcoding, and cryptography, to mention just a few. Besides a comprehensive state-of-the-art description of the Pervasive Computing technology itself, this book gives an overview of today's real-life applications and accompanying service offerings. M-Commerce, e-Business, networked home, travel, and finance are exciting examples of applied Pervasive Computing.

Musical Sound Effects Jean-Michel Réveillac,2018-03-07 For decades performers, instrumentalists, composers, technicians and sound engineers continue to manipulate sound material. They are trying with more or less success to create, to innovate, improve, enhance, restore or modify the musical message. The sound of distorted guitar of Jimi Hendrix, Pierre Henry's concrete music, Pink Flyod's rock psychedelic, Kraftwerk 's electronic music, Daft Punk and rap T-Pain, have let emerge many effects: reverb, compression, distortion, auto-tune, filter, chorus, phasing, etc. The aim of this book is to introduce and explain these effects and sound treatments by addressing their theoretical and practical aspects.

Digital Roots Gabriele Balbi,Nelson Ribeiro,Valérie Schafer,Christian Schwarzenegger,2021-09-07 As media environments and communication practices evolve over time, so do theoretical concepts. This book analyzes some of the most well-known and fiercely discussed concepts of the digital age from a historical perspective, showing how many of them have pre-digital roots and how they have changed and still are constantly changing in the

digital era. Written by leading authors in media and communication studies, the chapters historicize 16 concepts that have become central in the digital media literature, focusing on three main areas. The first part, Technologies and Connections, historicises concepts like network, media convergence, multimedia, interactivity and artificial intelligence. The second one is related to Agency and Politics and explores global governance, datafication, fake news, echo chambers, digital media activism. The last one, Users and Practices, is finally devoted to telepresence, digital loneliness, amateurism, user generated content, fandom and authenticity. The book aims to shed light on how concepts emerge and are co-shaped, circulated, used and reappropriated in different contexts. It argues for the need for a conceptual media and communication history that will reveal new developments without concealing continuities and it demonstrates how the analogue/digital dichotomy is often a misleading one.

A Nation on the Line Jan M. Padios, 2018-03-23 In 2011 the Philippines surpassed India to become what the New York Times referred to as the world's capital of call centers. By the end of 2015 the Philippine call center industry employed over one million people and generated twenty-two billion dollars in revenue. In A Nation on the Line Jan M. Padios examines this massive industry in the context of globalization, race, gender, transnationalism, and postcolonialism, outlining how it has become a significant site of efforts to redefine Filipino identity and culture, the Philippine nation-state, and the

value of Filipino labor. She also chronicles the many contradictory effects of call center work on Filipino identity, family, consumer culture, and sexual politics. As Padios demonstrates, the critical question of call centers does not merely expose the logic of transnational capitalism and the legacies of colonialism; it also problematizes the process of nation-building and peoplehood in the early twenty-first century.

ACS Without an Attitude Harold L. Hallock,Gary Welter,David G. Simpson,Christopher Rouff,2017-05-03 This book de-emphasizes the formal mathematical description of spacecraft on-board attitude and orbit applications in favor of a more qualitative, concept-oriented presentation of these topics. The information presented in this book was originally given as a set of lectures in 1999 and 2000 instigated by a NASA Flight Software Branch Chief at Goddard Space Flight Center. The Branch Chief later suggested this book. It provides an approachable insight into the area and is not intended as an essential reference work. ACS Without an Attitude is intended for programmers and testers new to the field who are seeking a commonsense understanding of the subject matter they are coding and testing in the hope that they will reduce their risk of introducing or missing the key software bug that causes an abrupt termination in their spacecraft's mission. In addition, the book will provide managers and others working with spacecraft with a basic understanding of this subject.

Remediation Jay David Bolter, Richard Grusin, 1999 A new framework for considering how all media constantly borrow from and refashion other media. Media critics remain captivated by the modernist myth of the new: they assume that digital technologies such as the World Wide Web, virtual reality, and computer graphics must divorce themselves from earlier media for a new set of aesthetic and cultural principles. In this richly illustrated study, Jay David Bolter and Richard Grusin offer a theory of mediation for our digital age that challenges this assumption. They argue that new visual media achieve their cultural significance precisely by paying homage to, rivaling, and refashioning such earlier media as perspective painting, photography, film, and television. They call this process of refashioning remediation, and they note that earlier media have also refashioned one another: photography remediated painting, film remediated stage production and photography, and television remediated film, vaudeville, and radio.

Brain-Computer Interfaces Aboul Ella Hassanien, Ahmad Taher Azar, 2014-11-01 The success of a BCI system depends as much on the system itself as on the user's ability to produce distinctive EEG activity. BCI systems can be divided into two groups according to the placement of the electrodes used to detect and measure neurons firing in the brain. These groups are: invasive systems, electrodes are inserted directly into the cortex are used for single cell or multi unit recording, and electrocorticography (EcoG), electrodes are placed on the surface of the cortex (or dura); noninvasive systems, they are placed on the scalp and use electroencephalography (EEG) or magnetoencephalography (MEG) to detect neuron activity. The book is basically divided into three parts. The first part of the book covers the basic concepts and overviews of Brain Computer Interface. The second part describes new theoretical developments of BCI systems. The third part covers views on real applications of BCI systems.

The 'Made in Germany' Champion Brands Ugesh A. Joseph, 2016-03-09 Germany's economic miracle is a widely-known phenomenon, and the world-leading, innovative products and services associated with German companies are something that others seek to imitate. In *The 'Made in Germany' Champion Brands*, Ugesh A. Joseph provides an extensively researched, insightful look at over 200 of Germany's best brands to see what they stand for, what has made them what they are today, and what might be transferable. The way Germany is branded as a nation carries across into the branding of its companies and services, particularly the global superstar brands - truly world-class in size, performance and reputation. Just as important are the medium-sized and small enterprises, known as the 'Mittelstand'. These innovative and successful enterprises from a wide range of industries and product / service categories are amongst the World market leaders in their own niche and play a huge part in making Germany what it is

today. The book also focuses on German industrial entrepreneurship and a selection of innovative and emergent stars. All these companies are supported and encouraged by a sophisticated infrastructure of facilitators, influencers and enhancers - the research, industry, trade and standards organizations, the fairs and exhibitions and all the social and cultural factors that influence, enhance and add positive value to the country's image. Professionals or academics interested in business; entrepreneurship; branding and marketing; product or service development; international trade and business development policy, will find fascinating insights in this book; while those with an interest in Germany from emerging industrial economies will learn something of the secrets of German success.

The Net and the Butterfly Olivia Fox Cabane, Judah Pollack, 2017-02-07 In *The Charisma Myth*, Olivia Fox Cabane offered a groundbreaking approach to becoming more charismatic. Now she teams up with Judah Pollack to reveal how anyone can train their brain to have more eureka insights. The creative mode in your brain is like a butterfly. It's beautiful and erratic, hard to catch and highly valued as a result. If you want to capture it, you need a net. Enter the executive mode, the task-oriented network in your brain that help you tie your shoes, run a meeting, or pitch a client. To succeed, you need both modes to work together--your inner butterfly to be active and free, but your inner net to be ready to spring at the right time and create that aha! moment. But is there any way to trigger these insights, beyond dumb luck? Thanks to recent neuroscience discoveries, we can now explain these breakthrough moments--and also induce them through a series of specific practices. It turns out there's a hidden pattern to all these seemingly random breakthrough ideas. From Archimedes' iconic moment in the bathtub to designer Adam Cheyer's idea for Siri, accidental breakthroughs throughout history share a common origin story. In this book, you will learn to master the skills that will transform your brain into a consistent generator of insights. Drawing on their extensive coaching and training practice with top Silicon Valley firms, Cabane and Pollack provide a step-by-step process for accessing the part of the brain that produces breakthroughs and systematically removing internal blocks. Their tactics range from simple to zany, such as:

- Imagine an alternate universe where gravity doesn't exist, and the social and legal rules that govern it.
- Map Disney's Pocahontas story onto James Cameron's Avatar.
- Rid yourself of imposter syndrome through mental exercises.
- Literally change your perspective by climbing a tree.
- Stimulate your butterfly mode by watching a foreign film without subtitles.

By trying the exercises in this book, readers will emerge with a powerful new capacity for breakthrough thinking.

Critical CALL – Proceedings of the 2015 EUROCALL Conference, Padova, Italy Francesca Helm,Linda Bradley,Marta Guarda,Sylvie

Thouësny,2015-12-02 The theme of the conference this year was Critical CALL, drawing inspiration from the work carried out in the broader field of Critical Applied Linguistics. The term ‘critical’ has many possible interpretations, and as Pennycook (2001) outlines, has many concerns. It was from these that we decided on the conference theme, in particular the notion that we should question the assumptions that lie at the basis of our praxis, ideas that have become ‘naturalized’ and are not called into question. Over 200 presentations were delivered in 68 different sessions, both in English and Italian, on topics related specifically to the theme and also more general CALL topics. 94 of these were submitted as extended papers and appear in this volume of proceedings.
