Intelligence Analysis National Research Council, Division of Behavioral and Social Sciences and Education, Board on Behavioral, Cognitive, and Sensory Sciences, Committee on Behavioral and Social Science Research to Improve Intelligence Analysis for National Security, 2011-04-08 The U.S. intelligence community (IC) is a complex human enterprise whose success depends on how well the people in it perform their work. Although often aided by sophisticated technologies, these people ultimately rely on their own intellect to identify, synthesize, and communicate the information on which the nation's security depends. The IC's success depends on having trained, motivated, and thoughtful people working within organizations able to understand, value, and coordinate their capabilities. Intelligence Analysis provides up-to-date scientific guidance for the intelligence community (IC) so that it might improve individual and group judgments, communication between analysts, and analytic processes. The papers in this volume provide the detailed evidentiary base for the National Research Council's report, *Intelligence Analysis for Tomorrow: Advances from the Behavioral and Social Sciences*. The opening chapter focuses on the structure, missions, operations, and characteristics of the IC while the following 12 papers provide in-depth reviews of key topics in three areas: analytic methods, analysts, and organizations. Informed by the IC's unique missions and constraints, each paper documents the latest advancements of the relevant science and is a stand-alone resource for the IC's leadership and workforce. The collection allows readers to focus on one area of interest (analytic methods, analysts, or organizations) or even one particular aspect of a category. As a collection, the volume provides a broad perspective of the issues involved in making

difficult decisions, which is at the heart of intelligence analysis.

Security Operations Management Robert McCrie, 2011-03-31 The second edition of Security Operations Management continues as the seminal reference on corporate security management operations. Revised and updated, topics covered in depth include: access control, selling the security budget upgrades to senior management, the evolution of security standards since 9/11, designing buildings to be safer from terrorism, improving relations between the public and private sectors, enhancing security measures during acute emergencies, and, finally, the increased security issues surrounding the threats of terrorism and cybercrime. An ideal reference for the professional, as well as a valuable teaching tool for the security student, the book includes discussion questions and a glossary of common security terms. Additionally, a brand new appendix contains contact information for academic, trade, and professional security organizations. * Fresh coverage of both the business and technical sides of security for the current corporate environment * Strategies for outsourcing security services and systems * Brand new appendix with contact information for trade, professional, and academic security organizations

Border Management Modernization Gerard McLinden, Enrique Fanta, David Widdowson, Tom Doyle, 2010-11-30 Border clearance processes by customs and other agencies are among the most important and problematic links in the global supply chain. Delays and costs at the border undermine a country's competitiveness, either by taxing imported inputs with deadweight inefficiencies or by adding costs and reducing the competitiveness of exports. This book provides a practical guide to assist policy makers, administrators, and border management professionals with information and advice on how to improve border management systems, procedures, and

institutions.

Our Italy Charles Dudley Warner, 1891 Famed essayist and journalist Charles Dudley Warner (1829-1900) was the editor of the Hartford, Connecticut, Courant and a contributing editor to Harper's Magazine. Our Italy (1891) is Warner's account of a trip he made to Southern California in 1890. He describes conditions after the collapse of the 1886-1887 real estate boom and dubs the state south of the Sierra Madres our Italy. He focuses on the region's economic future: its promise as a healthy, productive residence, agricultural developments (particularly the citrus industry), climate and industry. He devotes less attention to beauty spots and tourist attractions, but he does discuss the Grand Canyon, Yosemite, and Monterey.

A League of Airmen James A. Winnefeld, Preston Niblack, Dana J. Johnson, 1994 This report examines the contributions and limitations of air power in the Persian Gulf War. The authors conclude that, for the first time in modern combat, air power was the equal partner of land and sea

power, performing the critical enabling function that led to victory. The authors seek to moderate, however, certain claims made by airpower advocates after the war: they maintain that the war did not demonstrate that a strategic air campaign guarantees victory, but rather that air power, skillfully employed under the right conditions, can neutralize, if not completely destroy, a modern army in the field. Nor did the war display breakthroughs in weapon technology, but rather the prowess of well-trained and motivated airmen and their support crews in using maturing technology. Moreover, the authors maintain, the air war was not fought as jointly as many supposed. The sheer mass of available air power allowed it to be used inefficiently at times to cater to doctrinal preferences of the various services.

Growing Smarter Robert D. Bullard, 2007-01-12 The smart growth movement aims to combat urban and suburban sprawl by promoting livable communities based on pedestrian scale, diverse populations, and mixed land use. But, as this book documents, smart growth has largely failed to address issues of social equity and environmental justice. Smart growth sometimes results in gentrification and displacement of low- and moderate-income families in existing neighborhoods, or transportation policies that isolate low-income populations. *Growing Smarter* is one of the few books to view smart growth from an environmental justice perspective, examining the effect of the built environment on access to economic opportunity and quality of life in American cities and metropolitan regions. The contributors to *Growing Smarter*—urban planners, sociologists, economists, educators, lawyers, health professionals, and environmentalists—all place equity at the center of their analyses of place, space, and race. They consider such topics as the social and environmental effects of sprawl, the relationship between sprawl and concentrated poverty, and community-based regionalism that can link cities and suburbs. They examine specific cases that

illustrate opportunities for integrating environmental justice concerns into smart growth efforts, including the dynamics of sprawl in a South Carolina county, the debate over the rebuilding of New Orleans after Hurricane Katrina, and transportation-related pollution in Northern Manhattan. *Growing Smarter* illuminates the growing racial and class divisions in metropolitan areas today—and suggests workable strategies to address them.

Intelligence Analysis for Tomorrow National Research Council,Division of Behavioral and Social Sciences and Education,Board on Behavioral, Cognitive, and Sensory Sciences,Committee on Behavioral and Social Science Research to Improve Intelligence Analysis for National Security,2011-04-08 The intelligence community (IC) plays an essential role in the national security of the United States. Decision makers rely on IC analyses and predictions to reduce uncertainty and to provide warnings about everything from international diplomatic relations to overseas conflicts. In today's complex and rapidly changing world, it is more important than ever that analytic products be accurate and timely. Recognizing that need, the IC has been actively seeking ways to improve its performance and expand its capabilities. In 2008, the Office of the Director of National Intelligence (ODNI) asked the National Research Council (NRC) to establish a committee to synthesize and assess evidence from the behavioral and social sciences relevant to analytic methods and their potential application for the U.S. intelligence community. In *Intelligence Analysis for Tomorrow*:

Advances from the Behavioral and Social Sciences, the NRC offers the Director of National Intelligence (DNI) recommendations to address many of the IC's challenges. Intelligence Analysis for Tomorrow asserts that one of the most important things that the IC can learn from the behavioral and social sciences is how to characterize and evaluate its analytic assumptions, methods, technologies, and management practices. Behavioral and social scientific knowledge can help the IC to understand and improve all phases of the analytic cycle: how to recruit, select, train, and motivate analysts; how to master and deploy the most suitable analytic methods; how to organize the day-to-day work of analysts, as individuals and teams; and how to communicate with its customers. The report makes five broad recommendations which offer practical ways to apply the behavioral and social sciences, which will bring the IC substantial immediate and longer-term benefits with modest costs and minimal disruption.

Managing Green Mandates Pietro S. Nivola,Jon A. Shields,2004-06-23 A Brookings Institution Press and American Enterprise Institute publication Federal policies have made great progress protecting the environment. But the policies sometimes have imposed inordinate costs on local governments. Managing Green Mandates describes how various federal environmental directives do not suit diverse conditions at the local level, and compel local communities to spend their revenues on reducing relatively minor risks to the public health. While policymakers have thrown far-reaching requirements at the feet of local authorities, the federal government is providing them less aid to comply with the increasingly stringent standards. The burden of these underfunded mandates can further disadvantage many overtaxed municipalities. Pietro Nivola is a senior fellow in the

Governmental Studies program at the Brookings Institution. He is the author of *The Laws of the Landscape: How Politics Shape Cities in Europe and America* (Brookings 1999). Jon Shields is a graduate student in the Department of Government and Foreign Affairs at the University of Virginia.

Moon-face and Other Stories Jack London,1906 JACK LONDON (1876-1916), American novelist, born in San Francisco, the son of an itinerant astrologer and a spiritualist mother. He grew up in poverty, scratching a living in various legal and illegal ways -robbing the oyster beds, working in a canning factory and a jute mill, serving aged 17 as a common sailor, and taking part in the Klondike gold rush of 1897. This various experience provided the material for his works, and made him a socialist. *The son of the Wolf* (1900), the first of his collections of tales, is based upon life in the Far North, as is the book that brought him recognition, *The Call of the Wild* (1903), which tells the story of the dog Buck, who, after his master's death, is lured back to the primitive world to lead a wolf pack. Many other tales of struggle, travel, and adventure followed, including *The Sea-Wolf* (1904), *White Fang* (1906), *South Sea Tales* (1911), and *Jerry of the South Seas* (1917). One of London's most interesting novels is the semi-autobiographical *Martin Eden* (1909). He also wrote socialist treatises, autobiographical essays, and a good deal of journalism.
