Introduces all the statistical models covered by R, beginning with simple classical tests such as chi-square and t-test. Proceeds to examine more advanced methods, from regression and analysis of variance, through to generalized linear models, generalized mixed models, time series, spatial statistics, multivariate statistics and much more. *The R Book* is aimed at undergraduates, postgraduates and professionals in science, engineering and medicine. It is also ideal for students and professionals in statistics, economics, geography and the social sciences.

Innovations and Implementations of Computer Aided Drug Discovery Strategies in Rational Drug Design Sanjeev Kumar Singh, 2021-02-02 This book presents various computer-aided drug discovery methods for the design and development of ligand and structure-based drug molecules. A wide variety of computational approaches are now being used in various stages of drug discovery and development, as well as in clinical studies. Yet, despite the rapid advances in computer software and hardware, combined with the exponential growth in the available biological information, there are many challenges that still need to be addressed, as this book shows. In turn, it shares valuable insights into receptor-ligand interactions in connection with various biological functions and human diseases. The book discusses a wide range of phylogenetic methods and highlights the applications of Molecular Dynamics Simulation in the drug discovery process. It also explores the application of quantum mechanics in order to provide better accuracy when calculating protein-ligand binding interactions and predicting binding affinities. In closing, the book provides illustrative descriptions of major challenges associated with computer-aided drug discovery for the development of therapeutic drugs. Given its scope, it offers a valuable asset for life sciences researchers, medicinal chemists and bioinformaticians looking for the latest information on computer-aided methodologies for drug development, together with their applications in drug discovery.

Cataloging Cultural Objects Murtha Baca, 2006-06-12 In a visual and artifact-filled world, cataloging one-of-a-kind cultural objects without published guidelines and standards has been a challenge. This cutting-edge reference offers practical resources for cataloging and flexibility to meet the needs of a wide range of institutions—from libraries to museums to archives. Consistently following these guidelines for selecting, ordering, and formatting data used to populate metadata elements in cultural materials' catalog records:

Promotes good descriptive cataloging and reduces redundancy Builds a foundation of shared documentation Creates data sharing opportunities Enhances end-user access across institutional boundaries Complements existing standards (AACR) This is a must-have reference for museum professionals, visual resources curators, archivists, librarians and anyone who documents cultural objects (including architecture, paintings, sculpture, prints, manuscripts, photographs, visual media, performance art, archaeological sites, and artifacts) and their images.
