Landscape as Infrastructure Pierre Belanger, 2016-11-10 As ecology becomes the new engineering, the projection of landscape as infrastructure—the contemporary alignment of the disciplines of landscape architecture, civil engineering, and urban planning— has become pressing. Predominant challenges facing urban regions and territories today—including shifting climates, material flows, and population mobilities, are addressed and strategized here. Responding to the under-performance of master planning and over-exertion of technological systems at the end of twentieth century, this book argues for the strategic design of infrastructural ecologies, describing a synthetic landscape of living, biophysical systems that operate as urban infrastructures to shape and direct the future of urban economies and cultures into the 21st century. Pierre Bélanger is Associate Professor of Landscape Architecture and Co-Director of the Master in Design Studies Program at Harvard University's Graduate School of Design. As part of the Department of Landscape Architecture and the Advanced Studies Program, Bélanger teaches and coordinates graduate courses on the convergence of ecology, infrastructure and urbanism in the interrelated fields of design, planning and engineering. Dr. Bélanger is author of the 35th edition of the Pamphlet Architecture Series from Princeton Architectural Press, *GOING LIVE: from States to Systems* (pa35.net), co-editor with Jennifer Sigler of the 39th issue of *Harvard Design Magazine*, *Wet Matter*, and co-author of the forthcoming volume *ECOLOGIES OF POWER: Mapping Military Geographies & Logistical Landscapes of the U.S. Department of Defense*. As a landscape architect and urbanist, he is the recipient of the 2008 Canada Prix de Rome in Architecture and the Curator for the Canada Pavilion and Canadian Exhibition, *EXTRACTION*, at the 2016 Venice Architecture Biennale (extraction.ca).

Molten Salts Marcelle Gaune-Escard, 2012-12-06 Several state-of-the-art applications of molten salts are presented, such as metal-molten salt systems, room temperature glass formation, and room temperature melts. Several recent examples of applications highlight the importance of molten salts in various industries (batteries, pyrochemical reprocessing of nuclear fuel, synthesis and catalysis). The basic concepts of the structure, dynamics, electrochemistry, interfacial and thermodynamic properties are detailed and relevant experimental methods described. Such fundamental concepts are essential for an in-depth understanding of the physicochemical properties of molten salts in general, including metal-molten salts, glass forming and low temperature melts. Experimental methods for investigating structural, dynamical, electrochemical thermodynamical and interfacial properties are detailed, as also are techniques for data collection and analysis. Scientists, engineers and technologists will find the volume a valuable reference source covering a wide spectrum of fundamental concepts and modern technologies.

IS-IS Network Design Solutions Abe Martey, 2002 The definitive IS-IS reference and design guide Extensive coverage of both underlying concepts and practical applications of the IS-IS protocol Detailed explanation of how the IS-IS database works and relevant insights into the operation of the shortest path first (SPF) algorithm Comprehensive tutorial on configuring and troubleshooting IS-IS on Cisco routers Advanced information on IP network design and performance optimization strategies using IS-IS Network design case studies provide a practical perspective of various design strategies Comprehensive overview of routing and packet-switching mechanisms on modern routers A collection of IS-IS packet formats and analyzer decodes useful for mastering the nuts and bolts of the IS-IS protocol and troubleshooting complex problems Interior gateway protocols such as Intermediate System-to-Intermediate System (IS-IS) are used in conjunction with the Border Gateway Protocol (BGP) to provide robust, resilient performance and intelligent routing capabilities required in large-scale and complex internetworking environments. Despite the popularity of the IS-IS protocol, however, networking professionals have depended on router configuration manuals, protocol

specifications, IETF RFCs, and drafts. Mastering IS-IS, regardless of its simplicity, has been a daunting task for many. IS-IS Network Design Solutions provides the first comprehensive coverage available on the IS-IS protocol. Networking professionals of all levels now have a single source for all the information needed to become true experts on the IS-IS protocol, particularly for IP routing applications. You will learn about the origins of the IS-IS protocol and the fundamental underlying concepts and then move to complex protocol mechanisms involving building, maintaining, and dissemination of the information found in the IS-IS database on a router. Subsequent discussions on IP network design issues include configuration and troubleshooting techniques, as well as case studies with practical design scenarios.

Industrially Important Fungi for Sustainable Development Ahmed M. Abdel-Azeem, Ajar Nath Yadav, Neelam Yadav, Zeba Usmani, 2021-06-18 Fungi are an understudied, biotechnologically valuable group of organisms. Due to their immense range of habitats, and the consequent need to compete against a diverse array of other fungi, bacteria, and animals, fungi have developed numerous survival mechanisms. However, besides their major basic positive role in the cycling of minerals, organic matter and mobilizing insoluble nutrients, fungi have other beneficial impacts: they are considered good sources of food and active agents for a number of industrial processes involving fermentation mechanisms as in the bread, wine and beer industry. A number of fungi also produce biologically important metabolites such as enzymes, vitamins, antibiotics and several products of important pharmaceutical use; still others are involved in the production of single cell proteins. The economic value of these marked positive activities has been estimated as approximating to trillions of US dollars. The unique attributes of fungi thus herald great promise for their application in biotechnology and industry. Since ancient Egyptians mentioned in their medical prescriptions how they can use green molds in curing wounds as the obvious historical uses of penicillin, fungi can be grown with relative ease, making production at scale viable. The search for fungal biodiversity, and the construction of a living fungi collection, both have incredible economic potential in locating organisms with novel industrial uses that will lead to novel products. Fungi have provided the world with penicillin, lovastatin, and other globally significant medicines, and they remain an untapped resource with enormous industrial potential. Volume 1 of Industrially Important Fungi for Sustainable Development provides an overview to understanding fungal diversity from diverse habitats and their industrial application for future sustainability. It encompasses current advanced knowledge of fungal communities and their potential biotechnological applications in industry and allied sectors. The book will be useful to scientists, researchers, and students of microbiology, biotechnology, agriculture, molecular biology, and environmental biology.

S., 2021-11-29 COVID-19 has, like other crises, thrown into relief social injustices and gendered inequalities. BIAS 31/ ERA 8 offers theological responses to and reflections on the COVID-19 outbreak and pandemic. All are by African scholars and authors; some are academic, some experiential, and others creative or impressionistic in tone. Reflecting the ethos and commitment of the Circle of Concerned African Women Theologians (The Circle) to nurture and promote the publications by and about African women and men committed to social justice and positive change, this issue contains the writings of some established but, predominantly, of emerging theologians. For some contributors, this is their first publication in an international series.

Geoecology of Landscape Dynamics Seema Sahdev, R. B. Singh, Manish Kumar, 2020-03-03

This book provides an overview of the ecological indicators of landscape dynamics in the context of geographical landscape integration. Landscape dynamics depicts every change that occurs in the physical, biological, and cognitive assets of a landscape. To understand and interpret the complex physical, biological, and cognitive phenomena of landscapes, it is necessary to operate conceptually and practically on a broad range of spatial and temporal scales. Rapid land use changes have become a concern to environmentalists and planners because of their impacts on the natural ecosystem, which further determines socioeconomic dynamics. In this regard, the book discusses case studies that share new insights into how landscape patterns and processes impact small creatures, and how small creatures in turn influence landscape structure and composition. In turn, the relevant aspects of land use and land cover dynamics are covered, and the multi-faceted relationship between the substrata and ecological community is highlighted. The book is unique in its focus on the application of spatial informatics such as automatic building extraction from high-resolution imagery; a soil resource inventory for meeting the challenges of land degradation; hydrological modeling; the temporal variation analysis of glacier area and the identification and mapping of glacial lakes; morphometric analysis of river basins; and the monitoring and modeling of urban sprawl, among other features.

Opportunities and Challenges for New and Peripheral Political Science Communities Gabriella

Ilonszki, Christophe Roux, 2022 The volume demonstrates that political science on the European fringes has seized opportunities and shown a remarkable development. On the other hand, perils of deinstitutionalization mainly caused by lack of resources and democratic backsliding may darken the discipline's future. It is a must read for all those interested in political science as a discipline and for policy-makers as well. -Hans-Dieter Klingemann, Emeritus Professor, Berlin Social Science Centre, Germany As Gabriel Almond famously noted, political science has always been a discipline divided into a great variety of schools and sects. This volume brings a perspective on this perennial theme which is as fresh as it is fascinating. What this reveals is the essential fragility of the discipline due to its power-challenging foundations - an insight which is of increasing significance for the discipline in all parts of the world. -Matthew Flinders, Professor of Politics at the University of Sheffield, UK This volume shows how the autonomous status reached by political science in the analysed countries

cannot be guaranteed against persistent threats and significant risks of de-institutionalization. A book that deserves to be read by all those who have at heart both the future of the discipline and the quality of democracy. -Giliberto Capano, Professor of Political Science and Public Policy, University of Bologna, Italy This open access book offers an updated examination of the institutionalisation of political science in sixteen latecomer or peripheral countries in Europe. Its main theme is how political science as a science of democracy is influenced and how it responds to the challenges of the new millennium. The chapters, built upon a common theoretical framework of institutionalisation, are evidence-based and comparative. Overall, the book diagnoses diversity among the country cases due to their take-off points and varied political and economic trajectories. Gabriella Ilonszki is Professor Emerita of Political Science at Corvinus University Budapest, Hungary. Christophe Roux is Professor of Political Science at the University of Montpellier, France.

Managed Aquifer Recharge for Water Resilience Peter Dillon, Enrique Fernández Escalante, Sharon B. Megdal, 2021-04-01 This book is a hard copy of the editorial and all the papers in a Special Issue of the peer-reviewed open access journal 'Water' on the theme 'Managed Aquifer Recharge for Water Resilience'. Managed aquifer recharge (MAR) is the purposeful recharge of water to aquifers for subsequent recovery or environmental benefit. MAR is increasingly used to make water supplies resilient to drought, climate change and deteriorating water quality, and to protect ecosystems from declining groundwater levels. Global MAR has grown exponentially to 10 cu.km/year and will increase ten-fold within a few decades. Well informed hydrogeologists, engineers and water quality scientists are needed to ensure that this investment is effective in meeting increasingly pressing needs. This compilation contains lessons from many examples of existing projects, including several national and continental summaries. It also addresses the elements essential for identifying and advancing projects such as mapping aquifer suitability and opportunities, policy matters, operational issues, and some innovations in MAR methods and monitoring. This collection exemplifies the state of progress in the science and practice of MAR and is intended to be useful, at least to water managers, water utilities, agricultural water users and urban planners, to facilitate water resilience through new MAR projects.

The Global Connections of Gandhāran Art Wannaporn Rienjang, Peter Stewart, 2020-09-02 Gandhāran art is often regarded as the epitome of cultural exchange in antiquity. The ancient region of Gandhāra, centred on what is now the northern tip of Pakistan, has been called the 'crossroads of Asia'. The Buddhist art produced in and around this area in the first few centuries AD exhibits extraordinary connections with other traditions across Asia and as far as the Mediterranean. Since the nineteenth century, the Graeco-Roman associations of Gandhāran art have attracted particular attention. Classically educated soldiers and administrators of that era were astonished by the uncanny resemblance of many works of Gandhāran sculpture to Greek and Roman art made thousands of miles to the west. More than a century later we can recognize that the Gandhāran artists' appropriation of classical iconography and styles was diverse and extensive, but the explanation of this 'influence' remains puzzling and elusive. The Gandhāra Connections project at the University of Oxford's Classical Art Research Centre was initiated principally to cast new light on this old problem. This volume is the third set of proceedings of the project's annual workshop, and the first to address directly the question of cross-cultural influence on and by Gandhāran art. The contributors wrestle with old controversies, particularly the notion that Gandhāran art is a legacy of Hellenistic Greek rule in Central Asia and the growing consensus around the important role of the Roman Empire in shaping it. But they also seek to present a more complex and expansive view of the networks in which Gandhāra was embedded. Adopting a global perspective on the subject, they examine aspects of Gandhāra's connections both within and beyond South Asia and Central Asia, including the profound influence which Gandhāran art itself had on the development of Buddhist art in China and

India.
