Read 180, 2002 READ 180 is a comprehensive reading intervention program designed to meet the needs of elementary to middle school students whose reading achievement is below the proficient level. The program directly addresses individual needs through differentiated instruction, adaptive and instructional software, high-interest literature, and direct instruction in reading, writing, and vocabulary skills. Stage A provides tools for young struggling readers in elementary school to develop critical literacy skills. Stage B provides middle school struggling readers with topics designed for their level of reading that hold their interest. System 44 was designed for the most challenged, older struggling readers, and helps these students understand that the English language is a finite system of 44 sounds and 26 letters that can be mastered. It uses validated assessment for screening and placement, research-based phonics instruction and highly motivating and age-appropriate adaptive technology.

Gaillard, Ilan Kelman, 2012-03-29 The Handbook provides a comprehensive statement and reference point for hazard and disaster research, policy making, and practice in an international and multi-disciplinary context. It offers critical reviews and appraisals of current state of the art and future development of conceptual, theoretical and practical approaches as well as empirical knowledge and available tools. Organized into five inter-related sections, this Handbook contains sixty-five contributions from leading scholars. Section one situates hazards and disasters in their broad political, cultural, economic, and environmental context. Section two contains treatments of potentially damaging natural events/phenomena organized by major earth system. Section three critically reviews progress in responding to disasters including warning, relief and recovery. Section four addresses mitigation of potential loss and prevention of disasters under two sub-headings: governance, advocacy and self-help, and communication and participation. Section five ends with a concluding chapter by the editors. The engaging international contributions reflect upon the politics and policy of how we think about and practice applied hazard research and disaster risk reduction. This Handbook provides a wealth of interdisciplinary information and will appeal to students and practitioners interested in Geography, Environment Studies and Development Studies.

Clinton in Haiti P. Girard, 2004-12-09 The book focuses on Aristide's political career, emphasizing his strategizing, compromising and dealing with the Clinton administration. In his presentation of the conflict, Girard carefully balances Aristide's and Clinton's needs, and the demands and moral positions the leaders make against each other - the result is that each leader and his constituency comes to life, and their maneuverings and decisions become engaging and meaningful. While Girard focuses on the conflict itself and the foreign policy dynamics at play between Haiti and the US, he also paints a compelling picture of contemporary Haiti and delineates with great clarity the tensions which led to recent violence and the deposition of Aristide.

Marketing in the Age of Google Vanessa Fox, 2010-05-03 Search has changed everything. Search has become woven into our everyday lives, and permeates offline as well as online activities. Every business should have a search strategy. How a business appears online can impact consumer influence as much as if not more than offline advertising like TV commercials. A business's search strategy can have a dramatic impact on how consumers interact with that business. But even more importantly, search engine activity provides amazingly useful data about customer behavior, needs, and motivations. Accessing search data is like conducting focus groups with millions of people for free. Search isn't just for marketers and techies. It can provide valuable insight on business strategy and product strategy. Companies of all sizes - from startups to global enterprise level corporations, and even businesses without web sites - can benefit from understanding how consumers are searching for them and talking about them online, both as a powerful acquisition channel and a vast repository of market research. In this non-technical book for executives, business owners, marketers, and product managers, search engine strategy guru Vanessa Fox-who created Google's portal for site owners, Google Webmaster Central -explains what every marketer or business owner needs to understand about how search rankings work, how to use search to better understand your customers and attract new ones, how to develop a comprehensive search strategy for your business, and how to build execution of this strategy into the businesses processes. This isn't another book about paid search for advertisers. This book focuses on organic listings - the unpaid results that receive 86% of searcher clicks. Written by search engine guru Vanessa Fox, formerly Google's search engine strategy spokesperson and creator of Google Webmaster Central Explains from a businessperson's perspective how to develop a successful search engine strategy Shows how to use the easily accessible data from search engines to increase qualified traffic, better understand customers, and strengthen customer relationships Reveals how smaller companies can leverage search

engine marketing to achieve parity with larger brands With this book in hand, every businessperson will have the knowledge and the tools to maximize the potential of search engine marketing to build a brand, draw new prospects, and generate sales.

IQ and Human Intelligence Nicholas John Mackintosh,1998 'What is intelligence?' may seem like a simple question to answer, but the study and measurement of human intelligence is one of the most controversial subjects in psychology. For much of its history, the focus has been on differences between people, on what it means for one person to be more intelligent than another, and how such differences might have arisen, obscuring efforts to understand the general nature of intelligence. These are obviously fundamental questions, still widely debated and misunderstood. New definitions of intelligence and new factors affecting intelligence are frequently being described, while psychometric testing is applied in most large industries. IQ and Human Intelligence provides a clear, authoritative overview of the main issues surrounding this fascinating area, including the modern development of IQ tests, the heritability of intelligence, theories of intelligence, environmental effects on IQ, factor analysis, relationship of cognitive psychology to measuring IQ, and intelligence in the social context. The clear, accessible style and numerous explanatory boxes make this the ideal text for advanced undergraduate and graduate students in psychology.

Dismantling Race in Higher Education Jason Arday,Heidi Safia Mirza,2018-08-31 This book reveals the roots of structural racism that limit social mobility and equality within Britain for Black and ethnicised students and academics in its inherently white Higher Education institutions. It brings together both established and emerging scholars in the fields of Race and Education to explore what institutional racism in British Higher Education looks like in colour-blind 'post-race' times, when racism is deemed to be 'off the political agenda'. Keeping pace with our rapidly changing global universities, this edited collection asks difficult and challenging questions, including why black academics leave the system; why the curriculum is still white; how elite universities reproduce race privilege; and how Black, Muslim and Gypsy traveller students are disadvantaged and excluded. The book also discusses why British racial equality legislation has failed to address racism, and explores what the Black student movement is doing about this. As the authors powerfully argue, it is only by dismantling the invisible architecture of post-colonial white privilege that the 21st century struggle for a truly decolonised academy can begin. This collection will be essential reading for students and academics working in the fields of Education, Sociology, and Race.

The Routledge Handbook on Cities of the Global South Susan Parnell,Sophie Oldfield,2014-03-26 The renaissance in urban theory draws directly from a fresh focus on the neglected realities of cities beyond the west and embraces the global south as the epicentre of urbanism. This Handbook engages the complex ways in which cities of the global south and the global north are rapidly shifting, the imperative for multiple genealogies of knowledge production, as well as a diversity of empirical entry points to understand contemporary urban dynamics. The Handbook works towards a geographical realignment in urban studies, bringing into conversation a wide array of cities across the global south – the 'ordinary', 'mega', 'global' and 'peripheral'. With interdisciplinary contributions from a range of leading international experts, it profiles an emergent and geographically diverse body of work. The contributions draw on conflicting and divergent debates to open up discussion on the meaning of the city in, or of, the global south; arguments that are fluid and increasingly contested geographically and conceptually. It reflects on critical urbanism, the macro- and micro-scale forces that shape cities, including ideological, demographic and technological shifts, and constantly changing global and regional economic dynamics. Working with southern reference points, the chapters present themes in urban politics, identity and environment in ways that (re)frame our thinking about cities. The Handbook engages the twenty-first-century city through a 'southern urban' lens to stimulate scholarly, professional and activist engagements with the city.

The Language of Gaming Astrid Ensslin,2017-09-16 This innovative text examines videogames and gaming from the point of view of discourse analysis. In particular, it studies two major aspects of videogame-related communication: the ways in which videogames and their makers convey meanings to their audiences, and the ways in which gamers, industry professionals, journalists and other stakeholders talk about games. In doing so, the book offers systematic analyses of games as artefacts and activities, and the discourses surrounding them. Focal areas explored in this book include: - Aspects of videogame textuality and how games relate to other texts - the formation of lexical terms and use of metaphor in the language of gaming - Gamer slang and 'buddylects' - The construction of game worlds and their rules, of gamer identities and communities - Dominant discourse patterns among gamers and how they relate to the nature of gaming - The multimodal language of games and gaming - The ways in which ideologies of race, gender, media effects and language are constructed Informed by the very latest scholarship and illustrated with topical examples throughout, *The Language of Gaming* is ideal for students of applied linguistics, videogame studies and media studies who are seeking a wide-ranging introduction to the field.
