Modern Statistics with R Måns Thulin,2021-07-28 The past decades have transformed the world of statistical data analysis, with new methods, new types of data, and new computational tools. The aim of Modern Statistics with R is to introduce you to key parts of the modern statistical toolkit. It teaches you: - Data wrangling - importing, formatting, reshaping, merging, and filtering data in R. - Exploratory data analysis - using visualisation and multivariate techniques to explore datasets. - Statistical inference - modern methods for testing hypotheses and computing confidence intervals. - Predictive modelling - regression models and machine learning methods for prediction, classification, and forecasting. - Simulation - using simulation techniques for sample size computations and evaluations of statistical methods. - Ethics in statistics - ethical issues and good statistical practice. - R programming - writing code that is fast, readable, and free from bugs. Starting from the very basics, Modern Statistics with R helps you learn R by working with R. Topics covered range from plotting data and writing simple R code to using cross-validation for evaluating complex predictive models and using simulation for sample size determination. The book includes more than 200 exercises with fully worked solutions. Some familiarity with basic statistical concepts, such as linear regression, is assumed. No previous programming experience is needed.

Fashion Meets Socialism Jukka Gronow,Sergey Zhuravlev,2015-08-19 This book presents, above all, a study of the establishment and development of the Soviet organization and system of fashion industry and design as it gradually evolved in the years after the Second World War in the Soviet Union, which was, in the understanding of its leaders, reaching the mature or last stage of socialism when the country was firmly set on the straight trajectory to its final goal, Communism. What was typical of this complex and extensive system of fashion was that it was always loyally subservient to the principles of the planned socialist economy. This did not by any means indicate that everything the designers and other fashion professionals did was dictated entirely from above by the central planning agencies. Neither did it mean that their professional judgment would have been only secondary to ideological and political standards set by the Communist Party and the government of the Soviet Union. On the contrary, as our study shows, the Soviet fashion professionals had a lot of autonomy. They were eager and willing to exercise their own judgment in matters of taste and to set the agenda of beauty and style for Soviet citizens. The present book is the first comprehensive and systematic history of the development of fashion and fashion institutions in the Soviet Union after the Second World War. Our study makes use of rich empirical and historical material that has been made available for the first time for scientific analysis and discussion. The main sources for our study came from the state, party and departmental archives of the former Soviet Union. We also make extensive use of oral history and the writings published in Soviet popular and professional press.

An Archaeology of Institutional Confinement Peter Davies,Penny Crook ,Tim Murray,2013-09-29 The archaeological assemblage from the Hyde Park Barracks is one of the largest, most comprehensive and best preserved collections of artefacts from any 19th-century institution in the world. Concealed for up to 160 years in the cavities between floorboards and ceilings, the assemblage is a unique archaeological record of institutional confinement, especially of women. The underfloor assemblage dates to the period 1848 to 1886, during which a female Immigration Depot and a Government Asylum for Infirm and Destitute Women occupied the second and third floors of the Barracks. Over the years the women discarded and swept beneath the floor thousands of clothing and textile fragments, tobacco pipes, religious items, sewing equipment, paper scraps and numerous other objects, many of which rarely occur in typical archaeological deposits. These items are presented in detail in this book, and provide unique insight into the private lives of young female migrants and elderly destitute women, most of whom will never be known from historical records.

Over the Range Richard V. Francaviglia,2019-12-01 Francaviglia looks anew at the geographical-historical context of the driving of the golden

spike in May 1869. He gazes outward from the site of the transcontinental railroad's completion—the summit of a remote mountain range that extends south into the Great Salt Lake. The transportation corridor that for the first time linked America's coasts gave this distinctive region significance, but it anchored two centuries of human activity linked to the area's landscape. Francaviglia brings to that larger story a geographer's perspective on place and society, a railroad enthusiast's knowledge of trains, a cartographic historian's understanding of the knowledge and experience embedded in maps, and a desert lover's appreciation of the striking basin-and-range landscape that borders the Great Salt Lake.

Mirror Symmetry Claire Voisin,1999 This is the English translation of Professor Voisin's book reflecting the discovery of the mirror symmetry phenomenon. The first chapter is devoted to the geometry of Calabi-Yau manifolds, and the second describes, as motivation, the ideas from quantum field theory that led to the discovery of mirror symmetry. The other chapters deal with more specialized aspects of the subject: the work of Candelas, de la Ossa, Greene, and Parkes, based on the fact that under the mirror symmetry hypothesis, the variation of Hodge structure of a Calabi-Yau threefold determines the Gromov-Witten invariants of its mirror; Batyrev's construction, which exhibits the mirror symmetry phenomenon between hypersurfaces of toric Fano varieties, after a combinatorial classification of the latter; the mathematical construction of the Gromov-Witten potential, and the proof of its crucial property (that it satisfies the WDVV equation), which makes it possible to construct a flat connection underlying a variation of Hodge structure in the Calabi-Yau case. The book concludes with the first naive Givental computation, which is a mysterious mathematical justification of the computation of Candelas, et al.

From Xenakis's UPIC to Graphic Notation Today Richard Barrett,Rodolphe Bourotte,Pierre Couprie,Cyrille Delhaye,Julio Estrada,2020-04-20 On the legacy of Xenakis' innovations in music notation for contemporary composers Trained in mechanical engineering, Greek-French composer Iannis Xenakis (1922-2001) transformed mathematical models into architectonic musical entities. In the late 1970s Xenakis developed a digital apparatus that rendered waveforms drawn on a tablet as musical compositions. The device was called UPIC, or Unité Polyagogique Informatique du CEMAMu, named for the French contemporary music research institute that Xenakis had helped found a decade earlier. The device proved to be an essential tool for the development of contemporary music--a version of the software is still used by today's composers. Featuring archival materials, this book examines the origins of Xenakis' UPIC. It also serves as a compositional tool: embedded QR codes allow readers to create their own sound-images from UPIC compositions.

It is addressed to advanced students and research mathematicians, and may also serve as a guide for lectures and for seminars at the graduate level.

So Many Christians, So Few Lions George Yancey,David A. Williamson,2014-11-06 So Many Christians, So Few Lions is a provocative look at anti-Christian sentiments in America. Drawing on both quantitative and qualitative research, authors George Yancey and David A. Williamson show that even though (or perhaps because) Christianity is the dominant religion in the United States, bias against Christians also exists—particularly against conservative Christians—and that this bias is worth understanding. The book does not attempt to show the prevalence of anti-Christian sentiments—called Christianophobia—but rather to document it, to dig into where and how it exists, to explore who harbors these attitudes, and to examine how this bias plays itself out in everyday life. Excerpts from the authors’ interviews highlight the fear and hatred that some people harbor towards Christians, especially the Christian right, and the ways these people exhibit elements of bigotry, prejudice, and dehumanization. The authors argue that understanding anti-Christian bias is important for understanding some social dynamics in America, and they offer practical suggestions to help reduce religious intolerance of all kinds.

Evidence-based LSP Khurshid Ahmad,Margaret Rogers,2007 This book presents a number of different perspectives on the central theme of 'evidence' and its interpretation in the study of specialist languages and their various uses. The principal topics include text corpora, citation patterns, some challenging dichotomies, terminology and knowledge management, and specialist translation. Each topic is presented in one of five parts, each with its own introduction. The volume includes contributions from established and new researchers in the field, as well as well-known scholars from other disciplines who bring a fresh eye to LSP studies. The book presents selected papers from LSP2003, the 14th European Symposium on Language for Special Purposes held at the University of Surrey, Guildford, in co-operation with the AILA Scientific Commission on Language for Special Purposes.
