Introduction to Permanent Plug and Abandonment of Wells Mahmoud Khalifeh,Arild Saasen,2020-01-27 This open access book offers a timely guide to challenges and current practices to permanently plug and abandon hydrocarbon wells. With a focus on offshore North Sea, it analyzes the process of plug and abandonment of hydrocarbon wells through the establishment of permanent well barriers. It provides the reader with extensive knowledge on the type of barriers, their functioning and verification. It then discusses plug and abandonment methodologies, analyzing different types of permanent plugging materials. Last, it describes some tests for verifying the integrity and functionality of installed permanent barriers. The book offers a comprehensive reference guide to well plugging and abandonment (P&A) and well integrity testing. The book also presents new technologies that have been proposed to be used in plugging and abandoning of wells, which might be game-changing technologies, but they are still in laboratory or testing level. Given its scope, it addresses students and researchers in both academia and industry. It also provides information for engineers who work in petroleum industry and should be familiarized with P&A of hydrocarbon wells to reduce the time of P&A by considering it during well planning and construction.

An Introduction to Applied Multivariate Analysis with R Brian Everitt, Torsten Hothorn, 2011-04-23 The majority of data sets collected by researchers in all disciplines are multivariate, meaning that several measurements, observations, or recordings are taken on each of the units in the data set. These units might be human subjects, archaeological artifacts, countries, or a vast variety of other things. In a few cases, it may be sensible to isolate each variable and study it separately, but in most instances all the variables need to be examined simultaneously in order to fully grasp the structure and key features of the data. For this purpose, one or another method of multivariate analysis might be helpful, and it is with such methods that this book is largely concerned. Multivariate analysis includes methods both for describing and exploring such data and for making formal inferences about them. The aim of all the techniques is, in general sense, to display or extract the signal in the data in the presence of noise and to find out what the data show us in the midst of their apparent chaos.

An Introduction to Applied Multivariate Analysis with R explores the correct application of these methods so as to extract as much information as possible from the data at hand, particularly as some type of graphical representation, via the R software. Throughout the book, the authors give many examples of R code used to apply the multivariate techniques to multivariate data.

Unexploded Ordnance Detection and Mitigation James Byrnes, 2008-12-19 The chapters in this volume were presented

at the July–August 2008 NATO Advanced Study Institute on Unexploded Ordnance Detection and Mitigation. The conference was held at the beautiful Il Ciocco resort near Lucca, in the glorious Tuscany region of northern Italy. For the ninth time we gathered at this idyllic spot to explore and extend the reciprocity between mathematics and engineering. The dynamic interaction between world-renowned scientists from the usually disparate communities of pure mathematicians and applied scientists which occurred at our eight previous ASI's continued at this meeting. The detection and neutralization of unexploded ordnance (UXO) has been of major concern for very many decades; at least since the First World war. UXO continues to be the subject of intensive research in many fields of science, including mathematics, signal processing (mainly radar and sonar) and chemistry. While today's headlines emphasize the mayhem resulting from the placement of improvised explosive devices (IEDs), humanitarian landmine clearing continues to draw significant global attention as well. In many countries of the world, landmines threaten the population and hinder reconstruction and fast, efficient utilization of large areas of the mined land in the aftermath of military conflicts.

The Diabetic Foot Aristidis Veves, John M. Giurini, Frank W. Logerfo, 2014-01-15

Do They Walk Like They Talk? Louis M. Imbeau, 2009-07-16 George Bush's 1988 campaign pledge, Read my lips: no new taxes, has become a mantra for those who distrust politicians and bureaucrats. The gulf between what political leaders say and do seems to be widening, and in democratic societies around the world, contributing to an atmosphere of cynicism and apathy among the citizenry. Understanding the characteristics and functions of speech in policy processes is a requirement for trying to overcome this problem; indeed, politicians and bureaucrats spend a good proportion of their time and resources discoursing, i.e., writing, speaking, and publishing. However, there has been scant analysis of political discourse; the aim of this book is to fill this analytical gap, by exploring political speech from a variety of perspectives, including normative, epistemological, and empirical. Incorporating insights from economics, political science, philosophy, and law, and evidence from the United States, Canada, France, Italy, Turkey, and the EU, the book addresses a wide variety of timely issues, including: Fiscal discipline in speeches vs budget balance: Is an improvement (deterioration) of the budget balance preceded by a more (less) fiscally disciplined discourse? Revenues and spending forecasted in budget speeches vs realised budget outcomes: Is there a systematic bias? If so, how can we explain it? Electoral pledges vs actual realisations: Do governments follow up on their electoral pledges? Ideological stance in party publications vs spending and revenues of party governments: Do parties of the right and the left speak different languages? How can we validly classify a government as of the left or of the right? Is there a systematic difference between governments of the right and of the left in terms of their policy? Speeches by central bank officers vs monetary policy: Can changes in monetary policy be predicted by official speeches? The political business cycle: How can taking into consideration the speech-action relationship strengthen (or threaten) our knowledge about electoral and partisan cycles in public spending? Other questions explored include: Should policy makers always tell the truth and all the truth? What are the benefits and the costs of transparency? How can we resolve the apparent

contradiction between the democratic demand for transparency and the efficiency requirement of secrecy in many policy areas (budget preparation, monetary policy, foreign policy, security, etc.)? Under which conditions is secrecy acceptable in a democratic society? To what extent may deception and lies lead to a breach of trust or to power abuse? What are the most efficient institutional mechanisms to prevent such abuse? Collectively, the authors present new insights for understanding political process and government activity, and suggest avenues for further research.

Environmental Risks and Challenges of Anthropogenic Metals Flows and Cycles E. van der Voet, 2013 A key question that relates to the very broad and intensive use of metals is whether society needs to be concerned about long-term supplies of any or many of them. This is a many-faceted question that cannot be answered quickly or unequivocally. To address it, the Global Metal Flows Working Group envisions a series of six reports, of which this is the third one addressing environmental risks and challenges of anthropogenic metals flows and cycles. This report, compiled by a group of international experts, focuses on the impact of metals on the environment as well as on their life cycle energy use. Currently, primary metals production is responsible for 7-8% of the total global energy use as well as for severe local environmental impacts. The report suggests to apply best available techniques and to increase recycling of metals, which not only requires significantly less energy per kg metal produced than primary production but also helps decreasing the overall local impacts of mining. However, even if recycling rates are increased, rising global demand for many metals will remain a huge environmental challenge in the next decades worldwide.--Page 4 of cover.
