A New Theory of Urban Design Christopher Alexander, 1987 The venerable cities of the past, such as Venice or Amsterdam, convey a feeling of wholeness, an organic unity that surfaces in every detail, large and small, in restaurants, shops, public gardens, even in balconies and ornaments. But this sense of wholeness is lacking in modern urban design, with architects absorbed in problems of individual structures, and city planners preoccupied

with local ordinances, it is almost impossible to achieve. In this groundbreaking volume, architect and planner Christopher Alexander presents a new theory of urban design which attempts to recapture the process by which cities develop organically. To discover the kinds of laws needed to create a growing whole in a city, Alexander proposes here a preliminary set of seven rules which embody the process at a practical level and which are consistent with the day-to-day demands of urban development. He then puts these rules to the test, setting out with a number of his graduate students to simulate the urban redesign of a high-density part of San Francisco, initiating a project that encompassed some ninety different design problems, including warehouses, hotels, fishing piers, a music hall, and a public square. This extensive experiment is documented project by project, with detailed discussion of how each project satisfied the seven rules, accompanied by floorplans, elevations, street grids, axonometric diagrams and photographs of the scaled-down model which clearly illustrate the discussion. *A New Theory of Urban Design* provides an entirely new theoretical framework for the discussion of urban problems, one that goes far to remedy the defects which cities have today.

Religious Revival in the Tibetan Borderlands Koen Wellens, 2011-04-01 Revival of religious practices of all sorts in China, after decades of systematic government suppression, is a topic of considerable interest to scholars in disciplines ranging from religious studies to anthropology to political science. This book examines contemporary religious practices among the Premi people of the Sichuan-Yunnan-Tibet area, a group of about 60,000 who speak a language belonging to the Qiang branch of Tibeto-Burman. Koen Wellens's ethnographic research in two Premi communities on opposite sides of the border, and his analysis of available historical documents, find multiple advocates and rationales for the revival of both formal Tibetan Buddhism and the indigenous Premi practices centered on ritual specialists called anji. Wellens argues that the variety in the shape the revitalization process takes--as it affects Premi on the Sichuan side of the border and their counterparts on the Yunnan side--can only be understood in a local cultural context. This full-length study of the Premi, the first in a language other than Chinese, makes a valuable contribution to our ethnographic knowledge of Southwest China, as well as to our understanding of contemporary Chinese religious and cultural politics.
