Discriminatory Clubs Christina L. Davis,2023-07-18 The discriminatory logic at the heart of multilateralism Member selection is one of the defining elements of social organization, imposing categories on who we are and what we do. Discriminatory Clubs shows how international organizations are like social clubs, ones in which institutional rules and informal practices enable states to favor friends while excluding rivals. Where race or socioeconomic status may be a basis for discrimination by social clubs, geopolitical alignment determines who gets into the room to make the rules of global governance. Christina Davis brings together a wealth of data on membership provisions for more than three hundred organizations to reveal the prevalence of club-style selection on the world stage. States join organizations to deepen their association with a particular group of states—most often their allies—and for the gains from policy coordination. Even organizations that claim to be universal, to target narrow issues, or to cover geographic regions use club-style admission criteria. Davis demonstrates that when it comes to the most important decision of cooperation—who belongs to the club and who doesn't—geopolitical alignment can matter more than the merits or policies of potential members. With illuminating case studies ranging from nineteenth-century Japan to contemporary Palestine and Taiwan, Discriminatory Clubs sheds light on how, for global and regional organizations such as the WTO and the EU, alliance ties and shared foreign-policy positions form the basis of cooperation.

Nature-Based Solutions for Urban Water Management Junguo Liu,Zhan Tian,Qinhua Ye,Laixiang Sun,Shiqiang Wu,2024-02-23 Water plays an essential role in the development and functioning of a city, but could also be a key risk factor for urban pluvial flooding, which may occur more frequently in the context of future climate change. The traditional means of flood risk management relied heavily on engineering measures, or the use of "gray" infrastructure. Recently, there has been a call to integrate nature-based solutions (NBS), which make use of natural processes and ecosystem services, with conventional engineering approaches. NBS infrastructures and designs pay great attention to ecosystem services considerations in assessing their induced hydrological processes, as well as in managing the stormwater and mitigating urban flood and droughts. Nevertheless, compared with grey infrastructure, larger space could be demanded for NBS, while the buffer effect for NBS in extremes events is still uncertain for evaluation.

The International Criminal Court and National Courts Nidal Nabil Jurdi,2016-03-03 This book analyzes the position of the ICC in relation to national court systems. The research illustrates that what seemed to be a straight forward relationship between the ICC and national courts under the complementarity mechanism, proves to be much more complex in practice. Using the referrals of Uganda and Darfur, the book demonstrates ways in which it might be possible to prosecute for crimes currently not prosecuted by the ICC and brings to light possible solutions to overcome the gaps in law and practice in the jurisdictional relation between the ICC and national systems. It will be of value to academics, students and policy-makers working in the area of international law, international organizations, and human rights.

Water Security Under Climate Change Asit K. Biswas,Cecilia Tortajada,2021-09-28 This book highlights the likely impacts of climate change in terms of global and national water securities, how different countries are attempting to address these complex problems and to what extent they are likely to succeed. A major global concern at present, especially after the social and economic havoc that has been caused by COVID-19 in only one year, is how we can return to earlier levels of economic development patterns and then further improve the process so that sustainable development goals are reached to the extent possible by 2030, in both developed and developing countries. Mankind is now facing two existential problems over the next several decades. These are climate change and whether the world will have access to enough water to meet all its food, energy, environment and health needs. Much of expected climate change impacts can be seen through the lens of extreme hydrological events, like droughts, floods and other extreme hydrometeorological events. Green Infrastructure in Chinese Cities Ali Cheshmehzangi,2022-03-19 Since 2014, and the start of the New-type Urbanization Plan (NUP), we see a turning point in the sustainability agenda of China. One of the main indicators is greening cities and the built environments, which will be covered holistically in this edited book. From the perspective of green infrastructure, in particular, the book approaches key areas of 'forest city development', 'sponge city program', 'green roofing', 'nature-based solutions', 'urban farming', 'eco-city development', etc. This is the first time that such important areas of research come together under the perspective of green Infrastructure. The results would be beneficial to policymakers, practitioners, and researchers in China and across the globe. The comprehensive set of findings from this book will benefit other countries, as we aim to highlight some of the best practices of the current age. The main aim of the book is to put together an excellent group of scholars and practitioners from the field, focusing on the topic of 'Green Infrastructure in Chinese Cities'. In doing so, we aim to cover some of the key 'best practices' for sustainable urbanism. Divided into four parts, the book covers four key areas of (1) Policy Interventions, (2) Planning Innovation, (3) Design Solutions, and (4) Technical Integration. In doing so, we cover an array of best practices related to green infrastructures of various types and their impacts on cities and communities in China. We expect the book to be a valuable resource for researchers in the areas of sustainability, urbanism, urban planning, urban geography, urban design, geographical sciences, environmental sciences, landscape architecture, and urban ecology. The book covers essential factors such as policy, regulations, and programs (in Part 1), planning paradigms and their impacts on urban development (in Part 2), integrated design solutions that suggest sustainable urbanization progression (in Part 3), and technical knowledge that would be utilized for the future development of green infrastructure practices in China and beyond. Lastly,

this edited book aims to provide a collaborative opportunity for experts and researchers of the field, who could contribute to the future pathways of sustainable urbanization of China. Lessons extracted from these contributions could be utilized for other contexts, which will benefit a wider group of stakeholders.

Mid-Century Modern – Visionary Furniture Design from Vienna Caroline Wohlgemuth,2021-12-31 In 1938, Vienna lost its best and most creative minds. This rupture was manifested in all of the arts and sciences and its mark is felt to this day – not least in the field of furniture design. With inexhaustible creativity the Jewish furniture designers who were forced to flee Vienna continued to work while in exile. They taught at the best universities and spread their ideas and vision throughout the entire world. Their creations became classics of twentieth-century furniture design, the epitome of mid-century modern style. This book honors the memory of the exiled designers with a thorough overview of their work. It details their life stories and their visionary designs, which remain as relevant and contemporary as ever, and brings to light new aspects of the history of Viennese furniture design.

Sustainable Environmental Engineering Walter Z. Tang,Mika Sillanpää,2018-08-01 The important resource that explores the twelve design principles of sustainable environmental engineering Sustainable Environmental Engineering (SEE) is to research, design, and build Environmental Engineering Infrastructure System (EEIS) in harmony with nature using life cycle cost analysis and benefit analysis and life cycle assessment and to protect human health and environments at minimal cost. The foundations of the SEE are the twelve design principles (TDPs) with three specific rules for each principle. The TDPs attempt to transform how environmental engineering could be taught by prioritizing six design hierarchies through six different dimensions. Six design hierarchies are prevention, recovery, separation, treatment, remediation, and optimization. Six dimensions are integrated system, material economy, reliability on spatial scale, resiliency on temporal scale, and cost effectiveness. In addition, the authors, two experts in the field, introduce major computer packages that are useful to solve real environmental engineering design problems. The text presents how specific environmental engineering issues could be identified and prioritized under climate change through quantification of air, water, and soil quality indexes. For water pollution control, eight innovative technologies which are critical in the paradigm shift from the conventional environmental engineering design to water resource recovery facility (WRRF) are examined in detail. These new processes include UV disinfection, membrane separation technologies, Anammox, membrane biological reactor, struvite precipitation, Fenton process, photocatalytic oxidation of organic pollutants, as well as green infrastructure. Computer tools are provided to facilitate life cycle cost and benefit analysis of WRRF. This important resource: • Includes statistical analysis of engineering design parameters using Statistical Package for the Social Sciences (SPSS) • Presents Monte Carlos simulation using Crystal ball to quantify uncertainty and sensitivity of design parameters • Contains design methods of new energy, materials, processes, products, and system to achieve energy positive WRRF that are illustrated with Matlab • Provides information on life cycle costs in terms of capital and operation for different processes using MatLab Written for senior or graduates in environmental or chemical engineering, Sustainable Environmental Engineering defines and illustrates the TDPs of SEE. Undergraduate, graduate, and engineers should find the computer codes are useful in their EEIS design. The exercise at the end of each chapter encourages students to identify EEI engineering problems in their own city and find creative solutions by applying the TDPs. Sustaining Global Surveillance and Response to Emerging Zoonotic Diseases National Research Council,Division on Earth and Life Studies,Board on Agriculture and Natural Resources,Institute of Medicine,Board on Global Health,Committee on Achieving Sustainable Global Capacity for Surveillance and Response to Emerging Diseases of Zoonotic Origin,2010-01-24 H1N1 (swine flu), SARS, mad cow disease, and HIV/AIDS are a few examples of zoonotic diseases-diseases transmitted between humans and animals. Zoonotic diseases are a growing concern given multiple factors: their often novel and unpredictable nature, their ability to emerge anywhere and spread rapidly around the globe, and their major economic toll on several disparate industries. Infectious disease surveillance systems are used to detect this threat to human and animal health. By systematically collecting data on the occurrence of infectious diseases in humans and animals, investigators can track the spread of disease and provide an early warning to human and animal health officials, nationally and internationally, for follow-up and response. Unfortunately, and for many reasons, current disease surveillance has been ineffective or untimely in alerting officials to emerging zoonotic diseases. Sustaining Global Surveillance and Response to Emerging Zoonotic Diseases assesses some of the disease surveillance systems around the world, and recommends ways to improve early detection and response. The book presents solutions for improved coordination between human and animal health sectors, and among governments and international organizations. Parties seeking to improve the detection and response to zoonotic diseases-including U.S. government and international health policy makers, researchers, epidemiologists, human health clinicians, and veterinarians-can use this book to help curtail the threat zoonotic diseases pose to economies, societies, and health.

Medienpolitik für Europa II Christina Holtz-Bacha,2010-12-28 Die medienpolitischen Aktivitäten des Europarates orientieren sich an den Rechten und Freiheiten der Europäischen Menschenrechtskonvention. Sie weisen daher ein breiteres Spektrum wie auch eine andere Perspektive auf als die Medienpolitik der Europäischen Union, die aus einer Wirtschaftsgemeinschaft entstanden ist und Medien daher primär als Wirtschaftsunternehmen behandelt. Wegen der unterschiedlichen Verbindlichkeit ihrer Aktivitäten hat es der Europarat jedoch schwerer, Aufmerksamkeit für seine Entscheidungen und Empfehlungen zu erlangen und steht eher im Schatten der EU. Dieses Buch verfolgt die Medienpolitik des Europarates, diskutiert ihre Wirksamkeit und die Chancen, damit neben der EU zu bestehen.
