Travel and Tourism Public Relations Dennis Deuschl,2006-08-11 The opening chapter explains the recent growth of industry PR, and travel & tourism news coverage which today focuses on the considerable economic benefits of the industry. Additionally, it reviews the leading news media that covers the industry, the primary PR tools and audiences, and details the factors leading to PR's new prominence across the industry. It also provides informative sidebars with lists of key industry print media, top travel agencies, plus a Travel Industry Association of America case study of a post-9/11/2001 campaign to restore American confidence in travelling. It also includes a composite definition of PR, and tells how PR is a discipline distinctively different from publicity, propaganda, advertising, and marketing. The author notes how, over the past decade due to economic conditions, PR in many cases has been integrated with marketing communications and played an important role in both strategic and tactical marketing activities. Following this overview, the ensuing five chapters examine communications model specifics that are of special importance to the industry's major sectors: hotels/lodging establishments; restaurants; tourist attractions/destinations; and transportation services. Each of these sectors have their own special messages, PR tools, and audiences. For example, meeting planners and travel agents are of most importance to hotels, while travel agents are of little importance to airlines and restaurants. Also included is a chapter about what travel employers should understand about PR The chapters will be followed by appendices that will include: The top 30 U.S. Travel & Tourism Professional/Trade Associations; and the Leading U.S. Travel & Tourism Universities.

Team Geek Brian W. Fitzpatrick,Ben Collins-Sussman,2012-07-06 In a perfect world, software engineers who produce the best code are the most successful. But in our perfectly messy world, success also depends on how you work with people to get your job done. In this highly entertaining book, Brian Fitzpatrick and Ben Collins-Sussman cover basic patterns and anti-patterns for working with other people, teams, and users while trying to develop software. This is valuable information from two respected software engineers whose popular series of talks—including Working with Poisonous People—has attracted hundreds of thousands of followers. Writing software is a team sport, and human factors have as much influence on the outcome as technical factors. Even if you've spent decades learning the technical side of programming, this book teaches you about the often-overlooked human component. By learning to collaborate and investing in the soft skills of software engineering, you can have a much greater impact for the same amount of effort. Team Geek was named as a Finalist in the 2013 Jolt Awards from Dr. Dobb's Journal. The publication's panel of judges chose five notable books, published during a 12-month period ending June 30, that every serious programmer should read.

Integrated Systems of Meso-Meteorological and Chemical Transport Models Alexander Baklanov,Alexander Mahura,Ranjeet Sokhi,2011-01-03 This book, as the outcome of the COST-728/NetFAM workshop, focuses on the following main topics: 1) on-line coupled meteorology-chemistry modelling with two-way feedbacks, 2) off-line coupled modelling and interfaces, 3) validation and case studies including air quality related episodes, and 4) integration of atmospheric chemical transport (ACT) models with numerical weather prediction (NWP). This book is one of the first attempts to give an overall look on such integrated meso-meteorology and chemistry modelling approach. It reviews the current situation with the on-line and off-line coupling of mesoscale meteorological and ACT models worldwide as well as discusses advantages and shortcomings, best practices, and gives recommendations for on-line and off-line coupling of NWP and ACT models, implementation strategy for different feedback mechanisms, direct and indirect effects of aerosols and advanced interfaces between both types of models. The book is oriented towards numerical weather prediction and air quality modelling communities.

Precision Livestock Farming Applications Ilan Halachmi,2015 Precision Livestock Farming (PLF) technology is a reality. PLF is a combination of developing animal sensing (sensors) tools and decision-making process at the farm level. It also has the potential to support animal feed suppliers, human-food retailers and other players along the supply chain to make better choices. The current challenge for PLF is the integration of the technology in the majority of the farms and not only to the pioneering farms. This book consist of full-length peer-reviewed papers combined with 'questions and answers' sections. It is the result of a joint session hosted by the European Association of Animal Production and brings together research focusing on real-time interpretation of the combination of sensor development, industry, animal genetics, animal nutrition, and animal health. Unique of this 'cross-disciplinary' approach is that 'animal-

focused' scientists, engineers, companies as well as farmers' organizations have interacted and combined their strengths and views. 'Precision Livestock Farming Applications - Making sense of sensors to support farm management' provides an update on the state of the art of PLF in interaction with the other scientific and applicative expertise. It is of interest for researchers, students, professionals, farmers, and livestock industry concerned with livestock production management.
