**Real Prospects for Energy Efficiency in the United States** National Research Council, National Academy of Engineering, National Academy of Sciences, America's Energy Future Panel on Energy Efficiency Technologies, 2010-06-10  
America's economy and lifestyles have been shaped by the low prices and availability of energy. In the last decade, however, the prices of oil, natural gas, and coal have increased dramatically, leaving consumers and the industrial and service sectors looking for ways to reduce energy use. To achieve greater energy efficiency, we need technology, more informed consumers and producers, and investments in more energy-efficient industrial processes, businesses, residences, and transportation. As part of

the America's Energy Future project, Real Prospects for Energy Efficiency in the United States examines the potential for reducing energy demand through improving efficiency by using existing technologies, technologies developed but not yet utilized widely, and prospective technologies. The book evaluates technologies based on their estimated times to initial commercial deployment, and provides an analysis of costs, barriers, and research needs. This quantitative characterization of technologies will guide policy makers toward planning the future of energy use in America. This book will also have much to offer to industry leaders, investors, environmentalists, and others looking for a practical diagnosis of energy efficiency possibilities.

*Electric and Hybrid Cars* Curtis D. Anderson, Judy Anderson, 2010-03-30 This illustrated history chronicles electric and hybrid cars from the late 19th century to today's fuel cell and plug-in automobiles. It describes the politics, technology, marketing strategies, and environmental issues that have impacted electric and hybrid cars' research and development. The important marketing shift from a "woman's car" to "going green" is discussed. Milestone projects and technologies such as early batteries, hydrogen and bio-mass fuel cells, the upsurge of hybrid vehicles, and the various regulations and market forces that have shaped the industry are also covered.

**The Transport System and Transport Policy** Bert van Wee, Jan Anne Annema, David Banister, 2013 This very interesting book provides an excellent multi-disciplinary introduction into the functioning of transport systems and the interaction with their environments. Erik Verhoef, VU University Amsterdam, The Netherlands The editors of this important book have clearly identified that few writings on transport treat the transport system as a whole. Implicit in this is a need for a genuinely multidisciplinary approach. An impressive list of contributors ensures that the book draws on the latest research whilst providing new insights into some of the key

challenges facing transport students and researchers, transport providers and policy makers. Æ Ð Roger Vickerman, University of Kent, UK Æ Since ancient times transportation has brought our world together. But the need for connectivity and accessibility in a spatially differentiated world has prompted the emergence of very complex transportation systems. This book offers a fresh and operational contribution to a better understanding of the complexity and manageability of a mobile world, by addressing in a balanced way both conceptual and applied or policy aspects of modern transportation systems. Æ Ð Peter Nijkamp, Free University of Amsterdam, The Netherlands Transport impacts on people and businesses in many different ways, and presents some of the key problems that decision-makers need to address. This comprehensive textbook introduces the transport system in a holistic and multidisciplinary way, bringing together the myriad components of transport. This textbook is written for an international readership of undergraduate and postgraduate students in transport and related subjects, as well as for professionals and policy decision-makers across both public and private sectors. Key features include: ¥ Discussion of the importance of transport accessibility and the impacts of transport on the environment and safety ¥ Policy issues relating to all of the discussed issues and prescribed future options. ¥ Transport evaluation methods and modelling approaches. ¥ Examples to highlight the linkages between components of the transport system Ð for example infrastructures, land-use, vehicle technologies Ð and the relevance of these linkages for decision making.

Making Futures Pelle Ehn, Elisabet M. Nilsson, Richard Topgaard, 2014-10-31 This book describes experiments in innovation, design, and democracy, undertaken largely by grassroots organizations, non-governmental organizations, and multi-ethnic working-class neighborhoods. These stories challenge the dominant perception of what constitutes successful innovations. They recount efforts at social innovation, opening the production process, challenging the creative class, and expanding the public sphere. The cases considered include a collective of immigrant women who perform collaborative services, the development of an open-hardware movement, grassroots journalism, and hip-hop performances on city buses. They point to the possibility of democratized innovation that goes beyond solo entrepreneurship and crowdsourcing in the service of corporations to include multiple futures imagined and made locally by often-marginalized publics.

*The Ideal Bartender* Thomas Bullock, Tom Bullock, 1917 A complete reproduction of the Vintage Cocktail Book *The Ideal Bartender* originally published in 1917. Tom Bullock became to be a well-recognized bartender of the time at St. Louis Country Club, where he served for government officials and other elite members. G.H. Walker, grandfather of George W. Bush was one of the big fans of Bullock's cocktails and wrote the introduction. After publishing this cocktail book, Prohibition made Bullock's

profession illegal, yet bartending culture was stronger than ever, bartenders were well paid and tipped for supplying public a illegal substance of alcohol. Bullock moved frequently and changed professions during the dry period, but kept bartending at St. Louis Country Club where people could still drink. The country club did not keep the records on him working there. *Human Factors of Visual and Cognitive Performance in Driving* Candida Castro, 2008-11-21 Human error is involved in more than 90 percent of traffic accidents, and of those accidents, most are associated with visual distractions, or looking-but-

failing-to-see errors. Human Factors of Visual and Cognitive Performance in Driving gathers knowledge from a human factors psychology standpoint and provides deeper insight into traffic - user behavior and the ways drivers acquire information from the road. Emphasizes Drivers as Visual Information Processors Because driving is an eyes-wide-open task, drivers are exposed to a multitude of visual stimuli along their journey. This information must be correctly processed in order to make the right decisions and perform precise safety maneuvers. With contributions from more than 20 leading experts, this detailed resource discusses road and markings design, new technologies, signage, distraction, safety, situation awareness, workload, driving experience, fatigue, and driving interventions with the goal of improving driving behavior and preventing accidents. Addresses These Key Areas: Visual attention and in-vehicle technologies Interventions to reduce road trauma Avoiding collisions and the failures involved in that endeavor Using jargon-free language that is easily understood, this book compresses research from the past few decades into one accessible resource. It clearly and cohesively provides ergonomics and human factor engineers, industrial designers, and highway and roadway engineers with an overarching understanding of the incessant visual demands drivers face.
