The Language of New Media Lev Manovich,2002-02-22 A stimulating, eclectic accountof new media that finds its origins in old media, particularly the cinema. In this book Lev Manovich offers the first systematic and rigorous theory of new media. He places new media within the histories of visual and media cultures of the last few centuries. He discusses new media's reliance on conventions of old media, such as the rectangular frame and mobile camera, and shows how new media works create the illusion of reality, address the viewer, and represent space. He also analyzes categories and forms unique to new media, such as interface and database. Manovich uses concepts from film theory, art history, literary theory, and computer science and also develops new theoretical constructs, such as cultural interface, spatial montage, and cinegratography. The theory and history of cinema play a particularly important role in the book. Among other topics, Manovich discusses parallels between the histories of cinema and of new media, digital cinema, screen and montage in cinema and in new media, and historical ties between avant-garde film and new media.

The Challenge of Slums United Nations Human Settlements Programme,2012-05-23 The Challenge of Slums presents the first global assessment of slums, emphasizing their problems and prospects. Using a newly formulated operational definition of slums, it presents estimates of the number of urban slum dwellers and examines the factors at all level, from local to global, that underlie the formation of slums as well as their social, spatial and economic characteristics and dynamics. It goes on to evaluate the principal policy responses to the slum challenge of the last few decades. From this assessment, the immensity of the challenges that slums pose is clear. Almost 1 billion people live in slums, the majority in the developing world where over 40 per cent of the urban population are slum dwellers. The number is growing and will continue to increase unless there is serious and concerted action by municipal authorities, governments, civil society and the international community. This report points the way forward and identifies the most

promising approaches to achieving the United Nations Millennium Declaration targets for improving the lives of slum dwellers by scaling up participatory slum upgrading and poverty reduction programmes. The Global Report on Human Settlements is the most authoritative and up-to-date assessment of conditions and trends in the world's cities. Written in clear language and supported by informative graphics, case studies and extensive statistical data, it will be an essential tool and reference for researchers, academics, planners, public authorities and civil society organizations around the world.

   Dealers of Lightning Michael A. Hiltzik,2009-05-19 In the bestselling tradition of The Soul of a New Machine, Dealers of Lightning is a fascinating journey of intellectual creation. In the 1970s and '80s, Xerox Corporation brought together a brain-trust of engineering geniuses, a group of computer eccentrics dubbed PARC. This brilliant group created several monumental innovations that triggered a technological revolution, including the first personal computer, the laser printer, and the graphical interface (one of the main precursors of the Internet), only to see these breakthroughs rejected by the corporation. Yet, instead of giving up, these determined inventors turned their ideas into empires that radically altered contemporary life and changed the world. Based on extensive interviews with the scientists, engineers, administrators, and executives who lived the story, this riveting chronicle details PARC's humble beginnings through its triumph as a hothouse for ideas, and shows why Xerox was never able to grasp, and

ultimately exploit, the cutting-edge innovations PARC delivered. Dealers of Lightning offers an unprecedented look at the ideas, the inventions, and the individuals that propelled Xerox PARC to the frontier of technohistoiy--and the corporate machinations that almost prevented it from achieving greatness.

Shibusa Monty Adkins,Pip Dickens,2012 This book celebrates a number of artistic endeavours: music, painting and the skill of making in general with particular reflection upon Japanese aesthetics. Composer, Monty Adkins and visual artist, Pip Dickens (through a Leverhulme Trust Award collaboration) investigate commonality and difference between the visual arts and music exploring aspects of rhythm, pattern, colour and vibration as well as outlining processes utilised to evolve new works within these practices. The hand-cut paper Katagami stencil: a beautiful utilitarian object once used to apply decoration on to Japanese kimonos, is used as a poignant symbol the hand-made machine - by Adkins and Dickens both within the production of paintings and sound compositions and as a thematic link throughout the book. The book reviews examples of a number of contemporary artists and craftspeople and their individual approaches to making things well. It explores the balance between hand skills and technology within a works production with particular reference to Richard Sennetts review of material culture in The Craftsman. Shibusa includes contributing essays by arts writer, Roy Exley, who examines convergence and crossover within the arts and an in-depth history, and review, of the kimono making industry by Kyoto designer, Makoto Mori.

History of Nordic Computing 2 John Impagliazzo,Timo Järvi,Petri Paju,2009-09-21 The First Conference on the History of Nordic Computing (HiNC1) was organized in

Trondheim, in June 2003. The HiNC1 event focused on the early years of computing, that is the years from the 1940s through the 1960s, although it formally extended to year 1985. In the preface of the proceedings of HiNC1, Janis Bubenko, Jr. , John Impagliazzo, and Arne Sølvberg describe well the peculiarities of early Nordic c- puting [1]. While developing hardware was a necessity for the first professionals, quite soon the computer became an industrial product. Computer scientists, among others, grew increasingly interested in programming and application software. P- gress in these areas from the 1960s to the 1980s was experienced as astonishing. The developments during these decades were taken as the focus of HiNC2. During those decades computers arrived to every branch of large and medium-sized businesses and the users of the computer systems were no longer only computer s- cialists but also people with other main duties. Compared to the early years of comp- ing before 1960, where the number of computer projects and applications was small, capturing a holistic view of the history between the 1960s and the 1980s is conside- bly more difficult. The HiNC2 conference attempted to help in this endeavor.

Innovation and National Security Adam Segal,2019-09-18 For the past three-quarters of a century, the United States has led the world in technological innovation and development. The nation now risks falling behind its competitors, principally China. The United States needs to advance a national innovation strategy to ensure it remains the predominant power in a range of emerging technologies. Innovation and National Security: Keeping Our Edge outlines a strategy based on four pillars: restoring federal funding for research and development, attracting and educating a science and technology

workforce, supporting technology adoption in the defense sector, and bolstering and scaling technology alliances and ecosystems. Failure could lead to a future in which rivals strengthen their militaries and threaten U.S. security interests, and new innovation centers replace the United States as the source of original ideas and inspiration for the world.

  Critical Metals Handbook Gus Gunn,2014-01-06 Mankind is using a greater variety of metals in greaterquantities than ever before. As a result there is increasing globalconcern over the long-term availability of secure and adequatesupplies of the metals needed by society. Critical metals, whichare those of growing economic importance that might be susceptibleto future scarcity, are a particular worry. For many of thesewe have little information on how they are concentrated in theEarth's crust, how to extract them from their ores, and howto use, recycle and dispose of them effectively and safely. Published with the British Geological Survey, the CriticalMetals Handbook brings together a wealth of knowledge oncritical metals and provides a foundation for improving the futuresecurity and sustainability of critical metal supplies. Written byinternational experts, it provides a unique source of authoritativeinformation on diverse aspects of the critical metals, includinggeology, deposits, processing, applications, recycling,environmental issues and markets. It is aimed at a broadnon-specialist audience, including professionals and academicsworking in the exploration and mining sectors, in mining financeand investment, and in mineral processing and manufacturing. Itwill also be a valuable reference for policy makers concerned withresource management, land-use planning, eco-efficiency, recyclingand related fields.

Data Warehousing and Knowledge Discovery Yahiko Kambayashi,Werner Winiwarter,Masatoshi Arikawa,2003-06-30 Data Warehousing and Knowledge Discovery technology is emerging as a key technology for enterprises that wish to improve their data analysis, decision support activities, and the automatic extraction of knowledge from data. The objective of the Third International Conference on Data Warehousing and Knowledge Discovery (DaWaK 2001) was to bring together researchers and practitioners to discuss research issues and experience in developing and deploying data warehousing and knowledge discovery systems, applications, and solutions. The conference focused on the logical and physical design of data warehousing and knowledge discovery systems. The scope of the papers covered the most recent and relevant topics in the areas of association rules, mining temporal patterns, data mining techniques, collaborative filtering, Web mining, visualization, matchmaking, evelopment and maintenance of data warehouses, OLAP, and distributed data warehouses. These proceedings contain the technical papers selected for presentation at the conference. We received more than 90 papers from over 20 countries, and the program committee finally selected 34 papers. The conference program included one invited talk: "Knowledge Management in Heterogeneous Data Warehouse Environments" by Professor Larry Kerschberg, George Mason University, USA.

Digital Dominance Martin Moore,Damian Tambini,2018 Across the globe, Google, Amazon, Facebook, Apple and Microsoft have accumulated power in ways that existing

regulatory and intellectual frameworks struggle to comprehend. A consensus is emerging that the power of these new digital monopolies is unprecedented, and that it has important implications for journalism, politics, and society. It is increasingly clear that democratic societies require new legal and conceptual tools if they are to adequately understand, and if necessary check the economic might of these companies. Equally, that we need to better comprehend the ability of such firms to control personal data and to shape the flow of news, information, and public opinion. In this volume, Martin Moore and Damian Tambini draw together the world's leading researchers to examine the digital dominance of technologies platforms and look at the evidence behind the rising tide of criticism of the tech giants. In fifteen chapters, the authors examine the economic, political, and social impacts of Google, Amazon, Facebook, Apple, and Microsoft, in order to understand the different facets of their power and how it is manifested. Digital Dominance is the first interdisciplinary volume on this topic, contributing to a conversation which is critical to maintaining the health of democracies across the world.

Adding Sense Mary Kalantzis,Bill Cope,2020-05-07 Through a wide range of examples, from literature to social media, the book explores how meaning and communication interact.

What Money Can't Buy Michael J. Sandel,2012-04-24 Should we pay children to read books or to get good grades? Should we allow corporations to pay for the right to pollute the atmosphere? Is it ethical to pay people to test risky new drugs or to donate their organs? What about hiring mercenaries to fight our wars? Auctioning admission to elite universities? Selling citizenship to immigrants willing to pay? In What Money Can't Buy,

Michael J. Sandel takes on one of the biggest ethical questions of our time: Is there something wrong with a world in which everything is for sale? If so, how can we prevent market values from reaching into spheres of life where they don't belong? What are the moral limits of markets? In recent decades, market values have crowded out nonmarket norms in almost every aspect of life—medicine, education, government, law, art, sports, even family life and personal relations. Without quite realizing it, Sandel argues, we have drifted from having a market economy to being a market society. Is this where we want to be?In his New York Times bestseller Justice, Sandel showed himself to be a master at illuminating, with clarity and verve, the hard moral questions we confront in our everyday lives. Now, in What Money Can't Buy, he provokes an essential discussion that we, in our market-driven age, need to have: What is the proper role of markets in a democratic society—and how can we protect the moral and civic goods that markets don't honor and that money can't buy?

  Global Multi-level Governance César de Prado,2007 Since the end of the Cold War, European and East Asian states have developed a series of unique trans-boundary structures and agreements, such as the European Union and ASEAN, and through new bilateral, multilateral and inter-regional relationships both Europe and East Asia are helping to transform other regions and the global community. This publication examines the complex emergence of a multi-level global governance system through innovative developments in info-communications governance; the role of policy advisors, think-tanks and related track-2 processes; and changes in higher education systems.

  Spoken Multimodal Human-Computer Dialogue in Mobile Environments

Wolfgang Minker,Dirk Bühler,Laila Dybkjær,2005-08-17 This book is based on publications from the ISCA Tutorial and Research Workshop on Multi-Modal Dialogue in Mobile Environments held at Kloster Irsee, Germany, in 2002. The workshop covered various aspects of devel- ment and evaluation of spoken multimodal dialogue systems and components with particular emphasis on mobile environments, and discussed the state-- the-art within this area. On the development side the major aspects addressed include speech recognition, dialogue management, multimodal output gene- tion, system architectures, full applications, and user interface issues. On the evaluation side primarily usability evaluation was addressed. A number of high quality papers from the workshop were selected to form the basis of this book. The volume is divided into three major parts which group together the ov- all aspects covered by the workshop. The selected papers have all been - tended, reviewed and improved after the workshop to form the backbone of the book. In addition, we have supplemented each of the three parts by an invited contribution intended to serve as an overview chapter.
