◻ The Robotic Process Automation Handbook Tom Taulli,2020-02-28 While Robotic Process Automation (RPA) has been around for about 20 years, it has hit an inflection point because of the convergence of cloud computing, big data and AI. This book shows you how to leverage RPA effectively in your company to automate repetitive and rules-based processes, such as scheduling, inputting/transferring data, cut and paste, filling out forms, and search. Using practical aspects of implementing the technology (based on case studies and industry best practices), you'll see how companies have been able to realize substantial ROI (Return On Investment) with their implementations, such as by lessening the need for hiring or outsourcing. By understanding the core concepts of RPA, you'll also see that the technology significantly increases compliance – leading to fewer issues with regulations – and minimizes costly errors. RPA software revenues have recently soared by over 60 percent, which is the fastest ramp in the tech industry, and they are expected to exceed $1 billion by the end of 2019. It is generally seamless with legacy IT environments, making it easier for companies to pursue a strategy of digital transformation and can even be a gateway to AI. The Robotic Process Automation Handbook puts everything you need to know into one place to be a part of this wave. In this thoroughly revised edition of her bestselling text, Julie Pallant guides you through the entire research process, helping you choose the right data analysis technique for your project. From the formulation of research questions, to the design of the study and analysis of data, to reporting the results, Pallant discusses basic and advanced statistical techniques. She outlines each technique clearly, with step-by-step procedures for performing the analysis, a detailed guide to interpreting data output and an example of how to present the results in a report. ⬜ ⬜Evaluation of the Department of Veterans Affairs Mental Health Services National Academies of Sciences, Engineering, and Medicine,Health and Medicine Division,Board on Health Care Services,Committee to Evaluate the Department of Veterans Affairs Mental Health Services,2018-03-29 Approximately 4 million U.S. service members took part in the wars in Afghanistan and Iraq. Shortly after troops started returning from their deployments, some active-duty service members and veterans began experiencing mental health problems. Given the stressors associated with war, it is not surprising that some service members developed such mental health conditions as posttraumatic stress disorder, depression, and substance use disorder. Subsequent epidemiologic studies conducted on military and veteran populations that served in the operations in Afghanistan and Iraq provided scientific evidence that those who fought were in fact being diagnosed with mental illnesses and experiencing mental health⬜ €related outcomes⬜ €in particular, suicide⬜ €at a higher rate than the general population. This report provides a comprehensive assessment of the quality, capacity, and access to mental health care services for veterans who served in the Armed Forces in Operation Enduring Freedom/Operation Iraqi Freedom/Operation New Dawn. It includes an analysis of not only the quality and capacity of mental health care services within the Department of Veterans Affairs, but also barriers faced by patients in utilizing those services.

⬜ ⬜The Closing and Reuse of the Philadelphia Naval Shipyard ,2001 The end of the Cold War left the United States with a larger defense infrastructure than needed to ensure the nation's security in the post-Cold War era. Accordingly, at the instigation of the Defense Department, Congress passed Base Realignment and Closure (BRAC) legislation to enable the department to close, reorganize, or other-wise convert assets to other purposes. Four rounds of BRAC closures ensued, resulting in the closure of 97 of 495 major installations. One of these was the Naval Shipyard in Philadelphia, Pennsylvania. Although considerable work has been done to examine the economic consequences of closing or scaling back shipyards, ' these efforts have not had a great deal of quantitative data to examine. Thus, the closure of four shipyards during the BRAC process provided a unique opportunity to gather specific data about costs of closure and reuse of temporarily excess shipbuilding facilities. Recognizing this opportunity, the Navy asked RAND's National Defense Research Institute to develop a case study of the Philadelphia Naval Shipyard (PNSY).
