Manual for the Production of Statistics on the Digital Economy United Nations Publications, 2021 The United Nations Conference on Trade and Development (UNCTAD) is a founding member of the Partnership on Measuring ICT for Development, which is an international, multi-stakeholder initiative to improve the availability and quality of ICT data and indicators. One of its key achievements is the development of a core list of ICT indicators for the production of internationally comparable statistics. This list was first endorsed by the United Nations Statistical Commission at its 38th session in March 2007 and has since been updated regularly. The Commission encouraged countries to use that list in their data collection programmes; a first version of the Manual for the Production of Statistics on the Information Economy was published at the end of 2007. An updated version was published in 2009. The current edition, entitled Manual for the Production of Statistics on the Digital Economy, was prepared to reflect the many changes that have taken place in the past decade in terms of access and use of ICTs. Compared to earlier versions, it expands the coverage of the measurement of e-commerce, trade in ICT services and trade in ICT-enabled (or digitally delivered) services. It contains more model questionnaires and reflects the most recent revisions of the Partnership's list of core ICT indicators. The Manual is intended to guide statisticians from developing countries through all the steps involved in the production and dissemination of statistics related to e-commerce and the digital economy.

**Hearing Impairment and Disability** Ariel Tenenbaum, Joav Merrick, Mohd N. Zakaria, 2020 Much research has been conducted to provide researchers and hearing healthcare professionals with updated information in regard to hearing assessments, results interpretation and case management. This ongoing research is particularly imperative to guide clinicians with optimized methods in assessing and managing pediatric patients with hearing impairment and disability. As such, tremendous research efforts have been made in determining the most optimum methods in assessing hearing using both subjective and objective tests. Since hearing loss can occur due to disrupted peripheral and/or central auditory pathway, there is also a growing interest to study children with auditory processing disorder (APD). Even though notable achievements have been observed in understanding APD, more research is required, particularly in establishing a gold standard APD test and its specific interventions. Additionally, having an objective test such as speech-evoked auditory brainstem response is beneficial to understand how speech sounds are encoded within the brainstem region in hearing-impaired children, as well as in those with compromised

neural function. In this book, we have gathered research from Malaysia and India in this field and hope it will be of interest to our readers--
