Mobile Service Innovation and Business Models Harry Bouwman,Henny de Vos,Timber Haaker,2010-10-19 Modern economies depend on innovation in services for their future growth. Service innovation increasingly depends on information technology and

digitization of information processes. Designing new services is a complex matter, since collaboration with other companies and organizations is necessary. Service innovation is directly related to business models that support these services, i.e. services can only be successful in the long run with a viable business model that creates value for its customers and providers. This book presents a theoretically grounded yet practical approach to designing viable business models for electronic services, including mobile ones, i.e. the STOF model and – based on it – the STOF method. The STOF model provides a ‘holistic’ view on business models with four interrelated perspectives, i.e., Service, Technology, Organization and Finance. It elaborates on critical design issues that ultimately shape the business model and drive its viability.

One Billion Hungry Gordon Conway, 2012-10-15 Hunger is a daily reality for a billion

people. More than six decades after the technological discoveries that led to the Green Revolution aimed at ending world hunger, regular food shortages, malnutrition, and poverty still plague vast swaths of the world. And with increasing food prices, climate change, resource inequality, and an ever-increasing global population, the future holds further challenges. In *One Billion Hungry*, Sir Gordon Conway, one of the world's foremost experts on global food needs, explains the many interrelated issues critical to our global food supply from the science of agricultural advances to the politics of food security. He expands the discussion begun in his influential *The Doubly Green Revolution: Food for All in the Twenty-First Century*, emphasizing the essential combination of increased food production, environmental stability, and poverty reduction necessary to end endemic hunger on our planet. Conway addresses a series of urgent questions about global hunger:

- How we will feed a growing global population in the face of a wide range of adverse factors, including climate change?
- What contributions can the social and natural sciences make in finding solutions?
- And how can we engage both government and the private sector to apply these solutions and achieve significant impact in the lives of the poor?

Conway succeeds in sharing his informed optimism about our collective ability to address these fundamental challenges if we use technology paired with sustainable practices and strategic planning. Beginning with a definition of hunger and how it is calculated, and moving through issues topically both detailed and comprehensive, each chapter focuses on specific challenges and solutions, ranging in scope from the farmer's daily life to the global movement of food, money, and ideas. Drawing on the latest scientific research and the results of projects around the world, Conway addresses the

concepts and realities of our global food needs: the legacy of the Green Revolution; the impact of market forces on food availability; the promise and perils of genetically modified foods; agricultural innovation in regard to crops, livestock, pest control, soil, and water; and the need to both adapt to and slow the rate of climate change. *One Billion Hungry* will be welcomed by all readers seeking a multifaceted understanding of our global food supply, food security, international agricultural development, and sustainability.

The Art of Mac Malware Patrick Wardle, 2022-07-12 A comprehensive guide to the threats facing Apple computers and the foundational knowledge needed to become a proficient Mac malware analyst. Defenders must fully understand how malicious software works if they hope to stay ahead of the increasingly sophisticated threats facing Apple products today. *The Art of Mac Malware: The Guide to Analyzing Malicious Software* is a comprehensive handbook to cracking open these malicious programs and seeing what's inside. Discover the secrets of nation state backdoors, destructive ransomware, and subversive cryptocurrency miners as you uncover their infection methods, persistence strategies, and insidious capabilities. Then work with and extend foundational reverse-engineering tools to extract and decrypt embedded strings, unpack protected Mach-O malware, and even reconstruct binary code. Next, using a debugger, you'll execute the malware, instruction by instruction, to discover exactly how it operates. In the book's final section, you'll put these lessons into practice by analyzing a complex Mac malware

specimen on your own. You'll learn to: Recognize common infections vectors, persistence mechanisms, and payloads leveraged by Mac malware Triage unknown samples in order to quickly classify them as benign or malicious Work with static analysis tools, including disassemblers, in order to study malicious scripts and compiled binaries Leverage dynamical analysis tools, such as monitoring tools and debuggers, to gain further insight into sophisticated threats Quickly identify and bypass anti-analysis techniques aimed at thwarting your analysis attempts A former NSA hacker and current leader in the field of macOS threat analysis, Patrick Wardle uses real-world examples pulled from his original research. The Art of Mac Malware: The Guide to Analyzing Malicious Software is the definitive resource to battling these ever more prevalent and insidious Apple-focused threats.

Citizenville Gavin Newsom, 2014-01-28 “A fascinating case for a more engaged government, transformed to meet the challenges and possibilities of the twenty-first century.” —President William J. Clinton A rallying cry for revolutionizing democracy in the digital age, Citizenville reveals how ordinary Americans can reshape their government for the better. Gavin Newsom, the lieutenant governor of California, argues that today’s government is stuck in the last century while—in both the private sector and our personal lives—absolutely everything else has changed. Drawing on wide-ranging interviews with thinkers and politicians, Newsom shows how Americans can transform their government, taking matters into their own hands to dissolve political gridlock even as they produce tangible changes in the real world. Citizenville is a timely road map for restoring American prosperity and for reinventing citizenship in today’s networked age.

A Passion for Speed Paul Smiddy, 2017-09-01 The Honourable Mrs Victor Bruce: record-breaking racing motorist; speedboat racer; pioneering aviator and businesswoman – remarkable achievements for a woman of the 1920s and '30s. Mildred Bruce enjoyed a privileged background that allowed her to search for thrills beyond the bounds of most female contemporaries. She raced against the greats at Brooklands, drove 200 miles north of the Arctic Circle and won the first ladies' prize at the Monte Carlo Rally. Whilst Amy Johnson was receiving global acclaim for her flight to Australia, Mildred learned to fly, and a mere eight weeks later she embarked on a round-the-world flight, becoming the first person to fly solo from the UK to Japan. Captured by brigands and feted by the Siamese, Japanese and Americans, she survived several crashes with body and spirit intact, and became a glittering aviation celebrity on her return. A thoroughly modern woman, she pushed similar boundaries in her unconventional love life and later became Britain's first female airline entrepreneur. This is the story of a charismatic woman who defied the conventions of her time, and loved living life in the fast lane.
